Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition Springer Science & Business Media

This newly updated and revised volume of the Encyclopedia of Sustainability Science and Technology (ESST) details the role of Animal Breeding and Genetics in the sustainability of animal agriculture. The volume covers scientific principles and applications includes the current science used to advance cattle, poultry, swine, sheep, and equine populations, as well as the future role of techniques such as gene editing. International leaders in

the field explain foundational concepts such as heritability, the covariance between relatives, statistical approaches to predicting the genetic merit of individuals, and the development and advancement of molecular techniques to elucidate changes in the DNA sequence that underly phenotypic variation. The use of genetic-based tools to improve animal agriculture and meet consumer demands across species is treated in detail. Readers will gain an understanding of how global livestock producers have implemented advanced genetic selection tools and used them to improve reproduction, production, efficiency, health, and sustainability. The interactions of genetics and production environments, and the genetic components of the complex interactions among animals are also discussed. The

future of Animal Breeding and Genetics, including the challenges and opportunities that exist in feeding a growing world population, are addressed.

Housing developments emerge amid the paddy fields on the fringes of Calcutta; overflowing trains carry peasant women to informal urban labor markets in a daily commute against hunger; land is settled and claimed in a complex choreography of squatting and evictions: such, Ananya Roy contends, are the distinctive spaces of a communism for the new millennium -- where, at a moment of liberalization, the hegemony of poverty is quietly reproduced. An ethnography of urban development in Calcutta, Roy's book explores the dynamics of class and gender in the persistence of poverty. City Requiem, Calcutta emphasizes how gender itself is spatialized, and how gender relations are negotiated within the geopolitics of modernity and through the everyday practices of territory. Thus Roy shows how urban developmentalism, in its populist guise, reproduces the relations of masculinist patronage, and, in its entrepreneurial guise, seeks to reclaim a bourgeois Calcutta, gentlemanly in its nostalgias. In doing so, her work expands the field of poverty studies by showing how a politics of poverty is also a poverty

of knowledge, a construction and management of social and spatial categories.

*Equine Laminitis* El Colegio de Mexico AC The eHealth series is primarily meant for government ministries of health, information technology, and telecommunications, as well as others working in eHealth -- academics, researchers, eHealth professionals, nongovernmental organizations, and donors. The telemedicine module of the 2009 survey examined the current level of development of four fields of telemedicine: teleradiology, teledermatology, telepathology, and telepsychology, as well as four mechanisms that facilitate the promotion and development of telemedicine solutions in the short- and long-term: the use of a national agency, national policy or strategy, scientific development, and evaluation. Telemedicine: Opportunities and Developments in Member States discusses the results of the telemedicine module, which was completed by 114 countries (59% of Member States).

Covering both classical modalities of echocardiography and newer techniques, Clinical Echocardiography of the Dog and Cat shows how to assess, diagnose, and treat canine and feline heart disease. A clinical approach demonstrates how these modalities may be used to acquire images, and then how you can recognize and identify patterns, relate them to different diseases, and manage patient care with those findings. The print book includes a companion website with 50 videos of cardiac ultrasound exams and procedures. Written by veterinary cardiology specialists and echocardiographers Eric de Madron, Valerie Chetboul, and Claudio Bussadori, this indispensable echocardiography resource is ideal for general practitioner veterinarians as well as specialists, including cardiologists and radiologists. Dedicated coverage of canine and feline echocardiography emphasizes a more in-depth discussion of cardiac ultrasound, including the newest ones such as Tissue Doppler and speckle tracking imaging, and transesophageal and 3D echocardiography. A practical, clinical approach shows how these echocardiographic modalities are not just research tools, but useful in diagnosing and staging heart disease in day-to-day practice. Book plus website consolidates offers current information into a single cohesive source covering classical modalities and newer techniques, as well as updates relating to normal

echocardiographic examinations and values. 50 videos on the companion website demonstrate how to perform echocardiography procedures, illustrating points such as swirling volutes, color flow display of blood flows, dynamic collapses secondary to pericardial effusion, and tumors flicking in and out of the echocardiographic field. A section on presurgical assessment helps you assess risk and prepare for catheter-based correction of cardiac defects — accurate measurements and proper device selection are key to a successful procedure. Over 400 full-color illustrations and 42 summary tables help you achieve precise, high-quality imaging for accurate assessment, including photographs of cadaver animal specimens to clarify the relationship between actual tissues in health and disease and their images. *17 Passi Per Diventare Un Allevatore Di Successo Di Gatti Sphynx* Elsevier Health Sciences

In this dazzling multidisciplinary tour of Mexico City, Mauricio Tenorio-Trillo focuses on the period 1880 to 1940, the decisive decades that shaped the city into what it is today. Through a kaleidoscope of expository forms, *I Speak of the City* connects the realms of literature, architecture, music, popular language, art, and public health to investigate the city in a variety of contexts: as a living history textbook, as an expression of the state, as a modernist capital, as a laboratory, and as language. Tenorio's formal imagination allows the reader to revel in the free-flowing richness of his narratives, opening startling new vistas onto the urban experience. From art to city planning, from epidemiology to poetry, this book challenges the conventional wisdom about both Mexico City and the turn-of-the-century world to which it belonged. And by engaging directly with the rise of modernism and the cultural experiences of such personalities as Hart Crane, Mina Loy, and Diego Rivera, *I Speak of the City* will find an enthusiastic audience across the disciplines.

This book offers a state-of-the-art, evidence-based reference to all aspects of veterinary cytology. Truly multidisciplinary in its approach, chapters are written by experts in fields ranging from clinical pathology to internal medicine, surgery, ophthalmology, and dermatology, drawing the various specialties together to create a comprehensive picture of cytology's role in diagnosis and treatment of animal disease. Firmly grounded in the primary literature, the book focuses on companion

animals, with special chapters for species with fewer publications. Chapters are logically organized by body system, with additional chapters on tumors of particular import and diagnostic decision making. The first two sections of *Veterinary Cytology* focus on cytology techniques, quality control, and special laboratory techniques. Subsequent sections are organ/tissue-based and reflect what is known about the canine, feline, and equine species. This is followed by chapters on non-traditional species, including exotic companion mammals, rabbits, cattle, camelids, non-human primates, reptiles and birds, amphibians, fish, invertebrates, and sheep and goats. The last section highlights some unique features of the applications of cytology in industry settings. Provides a gold-standard reference to data-driven information about cytologic analysis in companion animal species. Brings together authors from a wide range of specialties to present a thorough survey of cytology's use in veterinary medicine. Offers broader species coverage and greater depth than any cytology reference currently available. *Veterinary Cytology* is an essential resource for clinical and anatomic pathologists and any specialist in areas using cytology, including veterinary oncologists, criticalists, surgeons, ophthalmologists, dermatologists, and internists.

Esta obra es una historia política de la ciudad de México, y comprende desde su fundación en el siglo XIV hasta las postrimerías del siglo XX. Por lo que sabemos no existe un ejemplo similar en la historiografía. Tal es el punto del volumen: vindicar la historia política como una necesidad absoluta en el entendimiento de la historia de la ciudad. Este proyecto es singular: lo político es el punto de fuga, el ámbito privilegiado del análisis y el principio ordenador de la narración.

Recently, technology and aging have been key research areas in human cognition. The Research Topic "Digital Skills and Life-long Learning: Digital Learning as a New Insight of Enhanced Learning by the Innovative Approach Joining Technology and Cognition" investigated technology's impact on cognitive and intellectual processes, highlighting how intensively technology can change and/or enhance the cognitive functioning throughout one's lifespan. The aim of this Research Topic was to provide an outlook through multidisciplinary research and development while addressing the dynamic intersection of cognition, mind, and technology. Our scope was 1) to favor the cognitive technology debate, 2) to overcome the dichotomies of technology and psychology, 3) to emphasize the advances in knowledge and well-being. This Research Topic comprises review studies and original articles, focused on digital skills that enhance human potential. Transversal approaches and cross-sectorial analysis were encouraged, leading to investigation areas related to cognitive and mental processing—in educational, rehabilitation, clinical settings—across aging. Articles of high relevance to the Research Topic were submitted on the subjects of a) research in human performance and human factors, b) new research and technologies addressing the needs of a growing populace, and c) cognitive aging and cognitive rehabilitation research.

We are inclined to see terrorist attacks as an aberration, a violent incursion into our lives that bears no intrinsic relation to the fundamental features of modern societies. But does this view misconstrue the relationship between terror and modernity? In this book, philosopher Donatella Di Cesare takes a historical approach and argues that terror is not a new phenomenon, but rather one that has always been a key part of modernity. At its most basic level, terrorism is about the struggle for power and sovereignty. The growing concentration of power in the hands of the state, which is a constitutive feature of modern societies, sows the seeds of terrorism, which is deployed as a weapon by those who are exposed to the violence of the state and feel that they have no other recourse. As Di Cesare illustrates her argument with examples ranging from the Red Brigades and 9/11 to jihadism and ISIS, her sophisticated analysis will appeal to anyone who wishes to understand contemporary terrorism more deeply, as well as to students and scholars of philosophy and political theory.
