8.5 Introducing other types of agents  
 198AGENT -BASED METHODS IN ECONOMICS AND FINANCE: Simulations  
 ...Artificial Economics can be defined as "a research field that aims at improving our understanding of socioeconomic processes with the help of computer simulation". Like in Theoretical Economics, the approach followed in Artificial Economics to gain understanding of socioeconomic processes involves building and analysing formal models. Artificial economics - Wikipedia Agent-based computational economics is the area of computational economics that studies economic processes, including whole economies, as dynamic systems of interacting agents. As such, it falls in the paradigm of complex adaptive systems.

In corresponding agent-based models, the "agents" are "computational objects modeled as interacting according to rules" over space and time, not real people. The rules are formulated to model behavior and social interactions based on incentives and information. Agent-based computational economics - Wikipedia The Artificial Economics conference series is a serie of symposia on Agent-based approaches of Economics and Finance. It has been created by Pr Philippe Mathieu, Pr Olivier Brandouy and Dr Bruno Beaufils in September 2005, at the University Lille 1 (Sciences and Technologies), France. Artificial Economics The course considered a range of agent-based models in economics, including market processes, evolution of norms (e.g.,

residential segregation), formation of economic classes, the emergence of multi-agent organizations (e.g., firms), and traffic. Courses/Programs: Agent-Based Computational Economics (ACE) Artificial Economics is a Symposium in Agent-based Computational Methods in Finance, Game Theory and their applications. It will be held in the city of Lille on September 15--16, 2005. Artificial Economics -- AE2005 Agent-based modeling is a powerful simulation modeling technique that has seen a number of applications in the last few years, including applications to real-world business problems. After the basic principles of agent-based simulation are briefly introduced, its four areas of application are discussed by using real-

world applications: flow simulation, organizational simulation, market ... Agent-based modeling: Methods and techniques for ... Our view is that Artificial Economics and Theoretical Economics share the same goals, do not differ conceptually as much as it is sometimes perceived, and their approaches are certainly complementary. Keywords: Artificial Economics, Computer Simulation, Computational Economics, Agent-based model- Artificial Economics: What, Why and How Rationality in Economics and in AI. Economics models the behavior of people, firms, and other decision makers, as a means to understand how these decisions shape the pattern of activities that produce value and ultimately satisfy (or fail to satisfy)

human needs and desires. Economic reasoning and artificial intelligence This paper reviews the development of agent-based (computational) economics (ACE) from an econometrics viewpoint. The review comprises three stages, characterizing the past, the present, and the future of this development. ... a new architecture of the agent-based artificial stock market. ... Simulation-Based Econometric Methods. Oxford University. Agent-based economic models and econometrics | The ... Artificial Economics 2010 is the 6th edition of a Conference Series started in 2005. Previous meetings took place in Lille (2005), Aalborg (2006), Palermo (2007), Innsbruck (2008) and Valladolid (2009). Artificial Economics 2010 - Unive Agent-based modelling and

simulation (ABMS) is a relatively new approach to modelling systems composed of autonomous, interacting agents. Agent-based modelling is a way to model the dynamics of complex systems and complex adaptive systems. Such systems often self-organize themselves and create emergent order. Tutorial on agent-based modelling and simulation ... New methods of economic modelling have been sought as a result of the global economic downturn in 2008. This unique book highlights the benefits of an agent-based modelling (ABM) approach. It demonstrates how ABM can easily handle complexity: heterogeneous people, households and firms interacting dynamically. Agent-based Modelling in Economics | CRESS Agent-based

Computational Economics (ACE) is a new discipline of economics, largely grounded on concepts like evolution, auto-organisation and emergence: it intensively uses computer simulations as well as artificial intelligence, mostly based on multi-agents systems.

Agent-based computational economics (ACE) is the computational study of economic processes modeled as dynamic systems of interacting agents. ACE is thus a specialization to economics of the basic artificial life (alife) paradigm. Below is a brief introduction to alife and ACE.
