This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

'Les Bird joined the Hong Kong Marine Police in 1976 and saw the last years of the hard-working, hard-drinking colonial policemen handing out rough justice in the World of Suzie Wong. He was one of a handful of senior officers dealing with sensitive issues including refugees fleeing Vietnam and the smuggling of guns, drugs and people to or from Communist China in the leadup to the handover of the colony back to China in 1997. Filled with gripping stories spanning twenty years, *A Small Band of Men* follows Bird and his mentor, "Diamond" Don Bishop, an eccentric officer whose volatile temper and larger-than-life personality was a major influence in Bird's career. Supported by his second-in-command, Joe Poon, Bird gained the trust of his band of men to such an extent that they followed him into danger, even at the risk of their own lives.'

This handbook is a sequel to an earlier volume entitled "A Theory of Supercritical Wing Sections, with Computer Programs and Examples." Since the completion of the first volume, which we shall refer to as Volume I (cf. [II]), some effort has been made to improve our airfoil design program. A number of more desirable air foils have been designed. In addition several of our wing sections have been tested in wind tunnels. We should like to make this material available here, since it is more convenient to use the design program in conjunction with data for a fairly broad range of examples. Moreover, we have developed new analysis programs that supersede our previous work. Chapter I is devoted to a brief discussion of the mathematics involved in our additions and modifications. There is only a minimum emphasis on theory, since the representation of important physical phenomena such as boundary layer shock wave interaction and separation is partly empirical. It is our contention, however, that the computer programs provide a better simulation than might have been expected. Chapter II presents numerical results found by our new methods, as well as comparisons with experimental data. Chapter III contains a discussion of the use of the program together with Fortran listings.

The Humanitarian Emergency Settings Perceived Needs Scale (HESPER) provides a quick, scientifically robust way of assessing the perceived serious needs of people affected by large-scale humanitarian emergencies, such as war, conflict or major natural disaster. Perceived needs are needs which are felt or expressed by people themselves and are problem areas with which they would like help. The HESPER Scale assesses a wide range of social, psychological and physical problem areas. However, it does not provide an answer as to whether, or how to, offer help. It simply identifies those serious problems that are common in a population. These problems should then be assessed and addressed in more detail. The HESPER Scale was developed by the World Health Organization and King's College London in order to fill several gaps in the humanitarian field. It enables needs assessments to be based directly on the views of people affected by humanitarian emergencies, and provides a more accurate picture of the serious problems with which the overall emergency-affected population wants help. This manual includes the HESPER Scale, as well as a detailed explanation of how to use the HESPER Scale, and how to organize, analyze and report on a HESPER survey.

This is the first translation of the Quran by an American woman. It is a universal and inclusive translation with the hope that Islam will be better understood in the West. She also challenges the use of the word "to beat" in 4: 34 as meaning "to go away" which is how the Prophet of Islam understood the word as it has historically justified violence against and abuse of Muslim women. "This interpretation must change," she says, "and revert to the way the Prophet understood it."

The language of Ancient Egypt has been the object of careful investigation since its decipherment in the nineteenth century, but this is the first accessible account that uses the insight of modern

linguistics. Antonio Loprieno discusses the hieroglyphic system and its cursive varieties, and the phonology, morphology and syntax of Ancient Egyptian, as well as looking at its genetic ties with other languages of the Near East. This book will be indispensable for both linguists and Egyptologists.

Eighteen countries. Five shock absorbers. Two bikers. One amazing adventure... After their fantastic trip round the world in 2004, fellow actors and bike fanatics Ewan McGregor and Charley Boorman couldn't shake the travel bug. Inspired by their UNICEF visits to Africa, they knew they had to go back and experience this extraordinary continent in more depth. And so they set off on their 15,000-mile journey with two new BMWs loaded up for the trip. Their route took them from John O'Groats at the northernmost tip of Scotland to Cape Agulhas on the southernmost tip of South Africa. Along the way they rode some of the toughest terrain in the world -- and met some of the friendliest people. They rode their bikes right up to the pyramids in Egypt and visited Luke Skywalker's house in Tunisia. They met people who had triumphed over terrifying experiences -- former childhood soldiers in Uganda and children living amidst the minefields of Ethiopia. They had a close encounter with a family of gorillas in Rwanda and were nearly trampled by a herd of elephants in Botswana. Riding through spectacular scenery, often in extreme temperatures, Ewan and Charley faced their hardest challenges yet. With their trademark humor and honesty they tell their story -- the drama, the dangers and sheer exhilaration of riding together again, through a continent filled with magic and wonder.

The Cooke and Hood families have been at each other's throats since the Spanish Main days. The latest chapter in their piratic rivalry takes place in 2004, when an old treasure map turns up. None of this seems to matter to Morgan Cooke, a cowardly, landlubbing accountant entirely ignorant of his heritage until his estranged father, Isaac, in need of crewmen, kidnaps him and thrusts him into the fray. When Morgan wakes up on a boat in the middle of the Caribbean, he learns that piracy still flourishes, albeit with far more discretion than in the old days--pirates disguise their fast boats as shrimpers or tugs--but with no less bloodshed. Judging even a shot at riches vastly preferable to a return to his lonely, fluorescent-lit work station existence, Morgan pierces his ear, dons the eye patch and peg leg, and set sail for glorious adventure.

Subdivided into three segments (Hebrew Bible, Greek Bible, Qumran), this updated and revised collection of essays represents the work of Emanuel Tov in the past seventeen years. He focuses on various aspects of the textual analysis of the Hebrew and Greek Bible, as well as the Qumran biblical manuscripts in Hebrew and Greek. Further he takes a special interest in the orthography of biblical manuscripts, the nature of the early Masoretic Text, the nature of the Qumran biblical texts and their importance for our understanding of the history of the biblical text, the editions of the Hebrew Bible, and the use of computers in biblical studies. The author also focuses on the interaction between textual and literary criticism and the question of the original text or texts of the Hebrew Bible. His special interests in the Qumran scrolls include the nature of the Qumran corpus, their scribal background, the contents of the various caves, and the number of the compositions and copies found at Qumran. His interest in the Septuagint translation evolves around its text-critical value, the Greek texts from the Judean Desert, and translation technique.

While lying has been a topic in the philosophy of language, there has been a lack of genuine linguistic analysis of lying. Exploring lying at the semantics-pragmatics interface, this book takes a contextualist stand by arguing that untruthful implicatures and presuppositions are part of the total signification of the act of lying.

Since the late nineteenth century, theatre has played a significant role in shaping social and political awareness in India. It has served to raise concerns in post-Independence India as well. *Modern Indian Theatre: A Reader* brings together writings that speak to the historical contexts from which theatrical practices emerged--colonization, socio-cultural suppression and appropriation, intercultural transformations brought about by the impact of the colonial forces, and acute critical engagement with socio-political issues brought about by the hopes and failures of Independence. The volume

addresses pertinent questions like how drama influences social change, the response of drama to the emergence and domination of mass media and the proliferation and influence of western media in India, and how mediations of gender, class, and caste influence drama, its language, forms, and aesthetics. The Introduction by Nandi Bhatia provides a comprehensive understanding of the interface between Indian theatre and 'modernity'.

The suspension expert's illustrated, comprehensive troubleshooting guide for dirt, street, and supermoto—with a solution to virtually any problem. Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance.

Discusses the composition, structure, occurrence, and changes in reefs during the past 2 billion years. This is the only fully integrated treatment of these factors and processes with the evolutionary history of the organisms that have built reefs. Emphasizes the functional roles of major groups (guilds) of reef-building, reef-destroying, and reef-dwelling organisms in the most complex of all marine communities. A structural model, based on modern reef guilds, is developed. Then the

functional roles of each major reef-building higher biologic taxon (algae, sponges, coral, etc.) is determined, and, on this basis, each such taxon is assigned to a reef community guild. Next, the author traces the geologic history and guild assignment of each major taxon through geologic time. The final chapter establishes a succession of ten major reef community types, and considers their extinction and recovery in the light of modern theories of cosmic and earthly events. Profusely illustrated.
