The artificial intelligence (AI) landscape has evolved significantly from 1950 when Alan Turing first posed the question of whether machines can think. Today, AI is transforming societies and economies. It promises to generate productivity gains, improve well-being and help address global challenges, such as climate change, resource scarcity and health crises.

The global hydraulic (Fluid Power) product market is booming. It is a multi billion dollar industry spanning all across the world. There is hardly any industry, where fluid power application does not exist. Each and every application has a Pump involved and many cases a hydraulic motor too. Therefore, the global field population of Hydraulic Pumps and Motors is enormous. There are numerous Hydraulic Pump and Motor manufacturers in the world, in all the continents. The significant of them has been mentioned in this book. United States of America is the largest producer of hydraulic Pumps and Motors. The Fluid power industry involves millions of Jobs across the Globe. User base market for hydraulic pumps and motors are almost unlimited. Vocational and engineering schools barely mention Fluid Power application and usage of hydraulic pumps and motors. This book is designed to

help the engineering schools to baptize their students with hydraulic Pumps and Motors and the industry as a whole. The book will put in touch the students with the actual pump and motor and their many applications. For those who are in Fluid Power industry, the book will provide variety of applications where hydraulic pumps and motors are profusely used.

From the film director behind his creation, Four gives readers an exclusive look at the adventures of Antoine Doinel through the screenplays and stills of the four films he appears in. Thought by many to be the fictional alter ego of Francois Truffaut, Antoine Doinel, played in all movies by Jean-Pierre Leaud, was a fictional character created by Truffaut that depicted many of his own memories ranging from childhood through divorce. Four is an enchanting look at the character of Antoine through screenplays and stills from four of Truffaut's most well-known films: The 400 Blows, Love at Twenty, Stolen Kisses, and Bed and Board.

This is the terrifying story of the most dangerous radical-right hate group to surface since the Ku Klux Klan first rode a century ago. The Silent Brotherhood attracted seemingly average citizens with their call for pride in race, family, and religion and their mission to save white, Christian America from a communist conspiracy. Here is how they became criminals and assassins in their effort to establish an Aryan homeland. 8-page photo insert.

Field Studies of Radon in Rocks, Soils, and Water focuses on the principal sources of indoor radon and detecting radon through geochemical and hydrological studies of ground water. The book addresses how to measure radon, covers geological field study techniques, and presents techniques for assessing radon potential. The geochemical and hydrological studies of ground water cover such areas as health effects and radionuclides in geology. Techniques for measuring radon in ground water are also provided. Field Studies of Radon in Rocks, Soils, and Water is an excellent practical guide for geologists, geochemists, ground water professionals, and geophysicists interested in radon.

This history explores the story of federal contributions to dam planning, design, and construction by carefully selecting those dams and river systems that seem particularly critical to the story. The history also addresses some of the negative environmental consequences of dam-building, a series of problems that today both Reclamation and the U.S. Army Corps of Engineers seek to resolve.

Fluid Flow Phenomena in Metals Processing outlines the fundamentals of fluid flow theory, emphasizing the potential applications of fluid flow concepts that are illustrated by actual problems drawn from the metallurgical literature. This book is divided into 10 chapters. Chapters 1 to 4 are devoted to the fundamentals of fluid flow, while Chapters 5 to 9 are concerned with the application of basic concepts to specific systems, such as electromagnetically driven flows, surface tension and natural convection driven flows, multiparticle systems, gas bubbles, and impinging jets. The discussion on flow measurements and introduction to physical modeling are provided in the last chapter. This publication is suitable for a one semester graduate

level course for metallurgy and chemical engineering students.

More than 84 per cent of professional rugby players in South Africa are going to find it difficult to survive financially once they stop playing rugby. How will they find success in their new careers once their rugby jerseys have been washed for the last time? From Locker Room to Boardroom explores how former South African rugby players culled certain traits from their playing days and applied them to their enterprises in order to make a successful transition from the rugby field (the locker room) to the business world (the boardroom). Naas Botha, Gary Teichmann, Joel Stransky, François Pienaar, Kevin de Klerk, Breyton Paulse and Kobus Wiese, to name but a few, share the many challenges they faced and the different strategies they employed on the road to establishing the single factor that, more than any other, lies at the root of their business success. Filled with entertaining anecdotes, sound practical advice and pioneering business models, From Locker Room to Boardroom provides a unique and fascinating approach to achieving success in the commercial world.
