 The World Atlas of Language Structures is a book and CD combination displaying the structural properties of the world's languages. Its 142 world maps and numerous regional maps are all in full colour. Each world map shows an average of 400 languages and is accompanied by a fully referenced description. The CD provides an interactive version of the database which allows the user to customize the maps and find and test correlations. The Atlas is an indispensable source of information for linguists, anthropologists, and geographers. It will be especially valuable for typologists, grammatical theorists, historical linguists, and those interested in a particular region. It sets new standards in comparative linguistics. No institution involved in language research can afford to be without it.

The Early Grade Reading Assessment (EGRA) measures students' progress towards reading. EGRA gauges early literacy skills through a 15-minute individual oral assessment of five fundamental reading skills. RTI worked with education experts to develop the EGRA in 2006, and it has been piloted and implemented in more than 40 countries. This volume aims to take stock of the substantial amount of information and experience generated through the use of EGRA, and to share this knowledge with practitioners, policymakers, and international donors. Chapters cover not only particular applications of the instrument but also put EGRA in the context of broader issues and developments in literacy and education.
