Important life lessons for the REAL WORLD What they don't teach you in school ... Ever since I completed my secondary education and to a certain extent my tertiary education, I have learnt various life skills and lessons for my working life and day-to-day life that I really wish I had learnt at a much younger age. These lessons and skills are helpful in what is referred to commonly as the real world post-secondary and tertiary education. I could quite easily recite the periodic table and I knew how to solve numerous algebraic equations; however, I did not know basic life skills, such as how to manage my own money properly or how to lodge a tax return. As time goes by, I realise how little of what I learnt at school and during my younger years I actually use in day-to-day life. The inspiration and reasoning for writing this book is so that you can learn some of these skills or at least have a basic understanding to build upon. With lots of quick life lessons this book can inspire and motivate you to gain an in-depth knowledge of the skills required for the real world we live in!

While law school may teach a student to learn the many rules of being a lawyer, it often fails to answer some of the more "practical" questions about being a good lawyer, such as "How do I measure success?", "What do my clients want from me?", and "How far should I go in pursuing the causes of my clients?". This book aims to answer these and many other questions left unanswered during law school.

Your graduate work was on bacterial evolution, but now you're lecturing to 200 freshmen on primate social life. You've taught Kant for twenty years, but now you're team-teaching a new course on Ethics and the Internet. The personality theorist retired and wasn't replaced, so now you, the neuroscientist, have to teach the "Sexual Identity" course. Everyone in academia knows it and no one likes to admit it: faculty often have to teach courses in areas they don't know very well. The

challenges are even greater when students don't share your cultural background, lifestyle, or assumptions about how to behave in a classroom. In this practical and funny book, an experienced teaching consultant offers many creative strategies for dealing with typical problems. How can you prepare most efficiently for a new course in a new area? How do you look credible? And what do you do when you don't have a clue how to answer a question? Encouraging faculty to think of themselves as learners rather than as experts, Therese Huston points out that authority in the classroom doesn't come only, or even mostly, from perfect knowledge. She offers tips for introducing new topics in a lively style, for gauging students' understanding, for reaching unresponsive students, for maintaining discussions when they seem to stop dead, and -yes- for dealing with those impossible questions. Original, useful, and hopeful, this book reminds you that teaching what you don't know, to students whom you may not understand, is not just a job. It's an adventure.

During medical training there are certain tasks that are not taught at medical school nor in the common reference books. There are some skills that medical students are expected to learn by 'osmosis'. These skills are never officially taught or examined in medical school, but are, however, a fundamental part of being a safe, good and efficient doctor. This book includes 'golden rules' or important points to remember and case examples, both of which are given as displayed extracts. This book will help the junior doctor unlock their potential and improve their performance, cutting the time it takes to achieve certain medical objectives. It is meant to fill in the gaps where the medical school and clinical guides stop. It gives the reader the information needed to organise themselves so that they can hit the ground running. It is not intended as a clinical survival guide, but more a friendly hand to allow the reader to get ahead in medicine and how to keep on track and develop a career path.
