Lab 1: Diffusion and Osmosis | Spurthi's AP Biology Notebook Diffusion And Osmosis Lab AnswerThe movement of molecules from areas of higher concentration to areas of lower concentration is called diffusion. Osmosis is the diffusion of water molecules across a semipermeable membrane. When the concentration levels of two solutions on either sides of the membrane are equal and no movement is detected, the solutions are isotonic.Diffusion & Osmosis Lab - AP BioHannah Baker Diffusion Osmosis Lab Answer Sheet Hypothesis 1: If you put a drop of food coloring in a glass of hot water and a glass of cold water, then the drop in the hot water will diffuse faster than the drop in the cold water.
