An Introduction to Anti-Bribery Management Systems ISO 37001
 An Introduction to Anti-Bribery Management Systems
 Global policy making is unfolding in distinctive ways above traditional nation-state policy processes. New practices of transnational administration are emerging inside international organizations but also alongside the trans-governmental networks of regulators and inside global public private partnerships. Mainstream policy and public administration studies have tended to analyse the capacity of public sector hierarchies to globalize national policies. By contrast, this Handbook investigates new public spaces of transnational policy-making, the design and delivery of global public goods and services, and the interdependent roles of transnational administrators who move between business bodies, government agencies, international organizations, and professional associations. This Handbook is novel in taking the concepts and theories of public administration and policy studies to get inside the black box of global governance. Transnational administration is a multi-actor and multi-scalar endeavour having manifestations, depending on the policy issue or problems, at the local, urban, sub-regional, sub-national, regional, national, supranational, supra-regional, transnational, international, and global scales. These scales of 'local' and 'global' are not neatly bounded and nested spaces but are articulated together in complex patterns of policy activity. These transnational patterns represent a reinvigoration of public administration and policy studies as the Handbook authors advance their analysis beyond the methodological nationalism of the nation-state.

The United Nations Convention against Corruption includes 71 articles, and takes a notably comprehensive approach to the problem of corruption, as it addresses prevention, criminalization, international cooperation, and asset recovery. Since it came into force more than a decade ago, the Convention has attracted nearly universal participation by states. As a global and comprehensive convention, which establishes new rules in several areas of anti-corruption law and helps shape domestic laws and policies around the world, this treaty calls for scholarly study. This volume helps to fill a gap in existing academic literature by providing an invaluable reference work on the Convention. It provides systematic coverage of the treaty, with each chapter discussing the relevant travaux préparatoires, the text of the final article, comparisons with other anti-corruption treaties, and available information about domestic implementing legislation and enforcement. This commentary is designed to serve as a reference work for academics, lawyers, and policy-makers working in the anti-corruption field, and in the fields of transnational criminal law and domestic criminal law. Contributors include anti-corruption experts, scholars, and legal practitioners from around the globe.

Engineering Rules Springer Nature

The last twenty years have witnessed an astonishing transformation: the fight against corruption has grown from a handful of local undertakings into a truly global effort. Law occupies a central role in that effort and this timely book assesses the challenges faced in using law as it too morphs from a handful of local rules into a global regime. The book presents the perspectives of a global array of scholars, of policy makers, and of practitioners. Topics range from critical theoretical understandings of the global regime as a whole, to regional and local experiences in implementing and influencing the regime, including specific legal techniques such as deferred prosecution agreements, addressing corruption issues in dispute resolution, whistleblower protection, civil and administrative prosecutions, as well as blocking statutes. The book also includes discussions of the future shape of the global regime, the emergence of transnational compliance standards, and discussions by leaders of international organizations that take a leading role in the transnationalization of anti-corruption law. The Transnationalization of Anti-Corruption Law deals with the most salient aspects of the global anti-corruption regime. It is written by people who contribute to the structure of the regime, who practice within the regime, and who study the regime. It is written for anyone interested in corruption or corruption control in general, anyone with a general interest in jurisprudence or in international law, and especially anyone who is interested in critical thinking and analysis of how law can control corruption in a global context.

This book presents a new framework for leadership in the construction industry which draws from the authentic leadership construct. The framework has three major themes: self-leadership, self-transcendent leadership, and sustainable leadership. Despite its significance, leadership has not been given due importance in the construction industry as focus is placed on managerial functionalism. At the project level, even with the technological advances in the industry in recent years, construction is realized in the form of people undertaking distinct interdependent activities which require effective leadership. The industry faces many challenges including: demanding client requirements and project parameters; more stringent regulations, codes and systems; intense competition in the industry; and threats from disruptive enterprise. In such a complex environment, technology-driven and tool-based project and corporate management is insufficient. It must be complemented by a strategic, genuine, stakeholder-focused and ethical leadership. Leadership in the Construction Industry is based on a study on authentic leadership and its development in Singapore. Leadership theories and concepts are reviewed; the importance of leadership in the construction industry is discussed; and the grounded theory approach which was applied in the study is explained. Many eminent construction professionals in Singapore were interviewed in the field study. Emerging from the experiences of the leaders documented in this book are three major themes: (1) self-leadership: how leaders engage in various self-related processes such as self-awareness, self-regulation, and role modeling. (2) self-transcendent leadership: how leaders go beyond leading themselves to leading others through servant leadership, shared leadership, spiritual leadership, and socially-responsible leadership; and, finally, (3) sustainable leadership or the strategies leaders employ to make the impact of their leadership lasting. A synthesis of these themes and their implications for leadership development is presented before the book concludes with some recommendations for current and aspiring leaders about how they can engage with them. This book is essential reading for all construction practitioners from all backgrounds; and researchers on leadership and management in construction.

When is a gift not a gift? When it's a bribe. For many, corporate hospitality oils the wheels of commerce. But where do you draw the line? Bribes, incentives and inducements are not just a matter of used banknotes stuffed in brown envelopes. Expenses, corporate settlement of personal bills, gifts and hospitality can all be used to influence business partners, clients and contractors. Can you afford unlimited fines? Under the Bribery Act 2010, a maximum of ten years' imprisonment and an unlimited fine may be imposed for offering, promising, giving, requesting, agreeing, receiving or accepting bribes. With such strict penalties, it's astonishing that so few companies have few or no measures in place to ensure that they are not liable for prosecution. The Ministry of Justice's quick start guide to the Bribery Act makes it clear that "There is a full defence if you can show you had adequate procedures in place to prevent bribery". Such procedures can be found in ISO 37001, the international standard for ABMSs. How to implement an ABMS ISO 37001: An Introduction to Anti-Bribery Management Systems explains how to implement an ABMS that meets the requirements of ISO 37001, from the initial gap analysis to due diligence management, and covers the following: An introduction to ISO 37001. An ABMS explained. Management processes within an ABMS. Implementing an ABMS. Risk assessment in due diligence. Whistleblowing and bribery investigations. Internal auditing and corrective action. Certification to ISO 37001. The book provides helpful guidance on the importance of clearly defining policies; logging gifts and hospitality in auditable records; ensuring a consistent approach across the organisation; controls for contractors; facilitation payments; and charitable and political donations. Meet the stringent requirements of the Bribery Act Not only will an ISO 37001-compliant ABMS help your organisation prove its probity by meeting the stringent requirements of the Bribery Act but it can also be adapted to most legal or compliance systems. An ethical approach to business is not just a legal obligation but a way to protect your reputation.

Handbook of Research on Trends and Issues in Crime Prevention, Rehabilitation, and Victim Support The Business Year

Hard and soft law developed by international and regional organizations, transgovernmental networks, and international courts increasingly shape rules, procedures, and practices governing criminalization, policing, prosecution, and punishment. This dynamic calls into question traditional approaches that study criminal justice from a predominantly national perspective, or that dichotomize the study of international from national criminal law. Building on socio-legal theories of transnational legal ordering, this book develops a new approach for studying the interaction between international and domestic criminal law and practice. Distinguished scholars from different disciplines apply this approach in ten case studies of transnational legal ordering that address transnational crimes such as money laundering, corruption, and human trafficking, international crimes such as mass atrocities, and human rights abuses in law enforcement. The book provides a comprehensive treatment of the changing transnational nature of criminal justice policymaking and practice in today's globalized world.

For almost two decades, China has claimed that its expanding economy benefits Europe, stimulating European growth, exports, and employment. But the reality is not so clear-cut. Whilst individual

companies may have profited from China's economic rise, unbalanced trade with China has actually cost Europe over 1.4 trillion euros in the last ten years as well as undermining its political influence. China's monumental infrastructural project, the Belt And Road Initiative or New Silk Road as it has come to be known - is set to make this situation even worse. The Silk Road Trap is the first book to expose just how risky this uneven partnership is for Europe. In it, leading expert on Asian affairs Jonathan Holslag, argues that Europe must reduce its reliance on China and work on building a stronger and more sustainable European economic model. By revealing the political aspirations and

economic strategy behind the new Silk Road, he lays out its implications for specific European industries, from steel over aircraft to robots. Holslag, though critical of China, does not, however, make the case for confrontational, Trumpian protectionism. Instead, he posits that the new Silk Road need not ensnare Europe; it offers the continent a unique opportunity to transition from a future "made in China" to one that is "made in Europe".
