This atlas provides a macro-regional overview of the areas that surround the European Union, from the Sahara to the Middle East, Western Balkans to European Russia, Turkey to the Arctic. Detailing key socio-economic data as well as developmental trends, the maps provide a comprehensive territorial analysis at a local scale and explore the potential for regional integration and cooperation. These pioneering maps examine challenges that threaten this wide, yet inter-connected, region, including environmental concerns in the North, political unrest in the East, social factors in the Western Balkans, and the upheaval in the Mediterranean since the Arab spring. Coverage investigates such key countries and areas as Libya, Israel, Palestine, Syria, and the Ukraine as well as explores such essential issues as Europe's energy procurement. In addition, it also presents a comparison with other world regions such as East Asia and North America. In the end, readers discover that territorial integration faces many shortcomings, but that deep regional cooperation would be a key driver for the EU's sustainable future. This atlas features the main

results of the "Integrated Territorial Analysis of the Neighbourhoods" research project undertaken by ESPON (The European Observation Network for Territorial Development and Cohesion). It provides scholars; local authorities and NGOs involved in cross-border cooperation; companies interested in energy, agriculture, water, transportation and communication; and interested readers with key insights into this important region.

The Handbook and Atlas of Curves describes available analytic and visual properties of plane and spatial curves. Information is presented in a unique format, with one half of the book detailing investigation tools and the other devoted to the Atlas of Plane Curves. Main definitions, formulas, and facts from curve theory (plane and spatial) are discussed in depth. They comprise the necessary apparatus for examining curves. An important and original part of the book is the Atlas, consisting of nearly 200 plane curve classes, more than 700 figures, and nearly 2,000 drawings of specific curves. The classes have been scrupulously chosen for their interesting and useful properties. The dynamics of each class is visually represented by a series of specially arranged precise drawings showing the qualitative change of a curve's behavior as the parameters defining the class vary. The book provides numerous application examples, descriptions of mechanisms for drawing various curves, and discussions of geometric spline possibilities. It includes more than 20 various geometric and linguistic indices and an update on world literature on curve theory. The Handbook and Atlas of Curves will be an invaluable reference for researchers, practitioners, students, and amateurs of mathematics.
