This book is an introduction to Max Weber's ambitious comparative study of the sociological and institutional foundations of the modern economic and social order. In this work originally published in German in 1920, Weber discusses the analytical methods of sociology and, at the same time, presents a devastating critique of prevailing sociological theory and of its universalist,

determinist underpinnings. None of Weber's other writings offers the reader such a grasp of his theories; none displays so clearly his erudition, the scope of his interests, and his analytical powers.

A new volume in the Emerging Issues in Analytical Chemistry series, Exercise, Sport, and Bioanalytical Chemistry: Principles and Practice focuses on the basic and applied aspects

of energy metabolism in humans. Concise and scientific, yet intelligible to the nonscientist, the book consists of two parts. Part I, Introduction: Basics and Background, provides the biochemistry necessary to understand the rest of the book and describes analytical processes and results as an aid to grasping the science. Part II, Applications: Knowledge into Practice, explores measurement techniques for metabolism, energy expenditure of various activities, techniques that

enhance expenditure, metabolic adaptation, foods and drugs that enhance expenditure, and the role of bioanalytical chemistry in future research in exercise and sport. Discussion of the benefits of exercise and practices for improving the capacity to perform exercise is illustrated by many useful and entertaining examples. This volume allows readers to come away with a grasp of the scientific concepts, how they are manifested in research techniques, and

how the results of research can be applied in the real world of public health and personal development. The Emerging Issues in Analytical Chemistry series is published in partnership with RTI International and edited by Brian F. Thomas. Fluida merupakan suatu bahasan yang erat kaitannya dengan kehidupan sehari-hari dan

sangat penting. Hampir tiap hari kita berhubungan dengan fluida. Fluida dapat ditandai dari zat yang dapat mengalir. Dengan demikian zat cair dan gas termasuk fluida. Secara umum fluida dibagi menjadi dua, yaitu fluida tidak bergerak (statis), dan fluida bergerak (dinamis). Dalam kehidupan sehari-hari, kita menjumpai pisau yang tajam dan tumpul. Mengapa hal ini terjadi? tentunya ada hubungannya dengan tekanan. Begitu juga

dengan besi besar yang dibuang ke laut, maka akan tenggelam. Namun, bagaimana dengan kapal laut? Prinsip apa yang bekerja padanya? Bagaimana juga dengan kapal selam yang bisa mengapung dan tenggelam? Semua bisa dibahas dengan menggunakan prinsip-prinsip pada fluida. Tidak hanya itu banyak sekali penerapannya dalam bidang kedokteran misalnya infus, jarum suntik, transfusi darah. Di bidang makhluk hidup juga ada penerapan fluida

misalnya pada penerapan manusia dan pencernaan manusia. Di bidang kelautan juga terdapat kapal selam, kapal laut, jembatan ponton, dan galangan kapal.
