Get all the facts and build your expertise on the fast-growing practice of home hemodialysis The use of home hemodialysis is becoming more popular every year. Home dialysis modalities not only provide more flexibility for patients, they are associated with

numerous benefits, including improved cardiovascular parameters and better quality of life. Most dialysis resources tend to focus on in-center hemodialysis with little to no discussion of home hemodialysis. The Handbook of Home Hemodialysis aims to change that with focused, detailed coverage on the topic. This timely, one-of-a-kind resource offers everything you need to build your expertise on the subject. It's also small enough to fit in your pocket and designed to provide accurate, easy-to-find answers on the fly. Clear drawings and illustrations clarify and highlight key information. The Handbook of Home Hemodialysis provides essential information on: The of history home hemodialysis Vascular access Patient recruitment and training Prescribing home hemodialysis Water handling Laboratory parameters/monitoring Emerging benefits Common complications Special populations Remote monitoring Building a home dialysis program, and more

 Howl the Owl is back with a new story about Helping Others With

Love.Howl's Grandpa Bob has a kidney disease and needs a transplant to receive a new and healthy kidney. Since his kidneys are sick and cannot do the work they are meant to, Grandpa Bob must do dialysis treatment until he can find a new kidney. Howl is curious about where his grandpa goes for dialysis treatment and how it works, so when Grandpa Bob invites him to come along to the dialysis clinic Howl happily accepts. Howl and his family also help Grandpa Bob in his search for a new kidney by posting on social media, displaying a sign on their car, and presenting at Howl's school about organ donation. Eventually Grandpa Bob receives his gift of life from a donor hero who was able to Help Others With Love. Brenda E. Cortez is a proud living kidney donor and ever since donating to another mom in 2005, Brenda has been an advocate for organ donation awareness and helping others. HOWL stands for Help Others With Love which is why Brenda created him to represent kindness and teach about organ donation! In this book, she takes on a topic that is affecting almost 500,000 people in the United States (millions worldwide) who are on dialysis for kidney failure, and approximately 93,000 who are currently waiting for a life-saving kidney transplant. As always, Brenda supports Donate Life America with partial proceeds from book sales. While continuous ambulatory peritoneal dialysis (CAPD) has been the standard peritoneal procedure since the seventies, different schedules of automated peritoneal dialysis (APD) have emerged during the eighties. Today, APD is considered a valuable tool in the management of ESRD patients, together with CAPD and hemodialysis. However, despite its frequent use, APD has not yet been well assessed, and most pathophysiological and clinical studies on PD refer to CAPD. In this book, major experts in the field therefore discuss and evaluate the insights gained on APD up to now, presenting a comprehensive review of all experimental, technical and clinical aspects related to the various treatments grouped under the definition of APD. The recent developments presented are divided into four sections: membrane permeability, transport mechanisms and kinetic modeling applied to APD; prescription and adequacy of different APD treatment schedules; dialysis machines and solutions for APD, and, lastly, different clinical aspects such as the possibility to maintain APD program and residual renal function. Physicians involved in ESRD care, renal fellows and scientists both in the academic world and in the hospital setting will undoubtedly profit from this timely publication.
