 Watch a video Watch a Fox News segment on The Longevity Project. This landmark study--which Dr. Andrew Weil calls "a remarkable achievement with surprising conclusions"--updates the advice we have been told about how to live to a healthy old age. We have been told that the key to longevity involves obsessing over what we eat, how much we stress, and how fast we run. Based on the most extensive study of longevity ever conducted, The Longevity Project exposes what really impacts our lifespan--including friends, family, personality, and work. Gathering new information and using modern statistics to study participants across eight decades, Dr. Howard Friedman and Dr. Leslie Martin bust myths about achieving health and long life. For example, people do not die from working long hours at a challenging job--many who worked the hardest lived the longest. Getting and staying married is not the magic ticket to long life, especially if you're a woman. And it's not the happy-go-lucky ones who thrive--it's the prudent and persistent who flourish through the years. With questionnaires that help you determine where you are heading on the longevity spectrum and advice about how to stay healthy, this book changes the conversation about living a long, healthy life.

 - The stunning fourth book in the Remembering Wildlife charity series - The aim of the creators is to make the most beautiful photographic book ever seen on a species and to use that to raise awareness of the plight facing that animal and also funds to protect it - Features images generously donated by many of the

world's top wildlife photographers (including six overall winners of Wildlife Photographer of the Year) - All profits from the sale of this book will be donated to projects working to protect lions in Africa
 The history of lions has been entwined with mankind for millions of years and they are surely the most celebrated of all animals. But, thanks to that same mankind who professes to revere them, their numbers have declined by half in the last quarter of a century alone. Wild lions are now just found in sub-Saharan Africa and a small pocket in India, with only around 20,000 left. The rapid reduction in the number of lions is one of the least-known stories in conservation, because their slaughter often happens out of sight. This book aims to open the eyes of the world to their plight before it's too late. Remembering Lions is the fourth book in the Remembering Wildlife fundraising series, which has so far raised more than USD \$800,000 for conservation. The aim of the creators is to make the most beautiful book ever seen on a species and use that to raise awareness of the plight facing that animal and funds to protect it. Each book is full of images generously donated by many of the world's top wildlife photographers. All profits from the sale of this book will be donated to projects working to protect lions in Africa.

It was the astronomers and mathematicians of the Islamic world who provided the theories and concepts that paved the way from the geocentric theories of Claudius Ptolemy in the second century AD to the heliocentric breakthroughs of Nicholas Copernicus and Johannes Kepler in the sixteenth and seventeenth centuries. Algebra, the Arabic numeral system, and trigonometry: all these and more originated in the Muslim East and undergirded an increasingly accurate and sophisticated understanding of the movements of the Sun, Moon, and planets. This nontechnical overview of the Islamic advances in the heavenly sciences allows the general reader to appreciate (for the first time) the absolutely crucial role that Muslim scientists played in the overall development of astronomy and astrology in the Eurasian world.

A Guided Journey Through Astrology Llewellyn Worldwide In 1647, William Lilly, renowned throughout England, sat down to write his famous book on astrology. He was ill, but he had foreseen that. He had decided that rather than struggle with clients while sick, he would give himself a year to study, reflect, and write. But before he was quite finished with his book, plague swept through London, killing two of his servants, and forcing Lilly and family to flee to the countryside. This is Book Three, An Easie and plaine Method Teaching How to judge upon Nativities, the conclusion of his great work, *Christian Astrology*. Of Marriage: The number and kinds of spouses, where they may come from, if there will be children or not, and if so, an idea of their number. . The kind of career best suited to the native, and much more. In the section on Directions and Forecasting, Lilly gives comprehensive interpretations for Primary Directions, Solar Returns and Profecions. The book concludes with a priceless analysis of the Nativity of an English Merchant, including more than twenty years of forecasts, up to

the time that Lilly judged to be the end of the man's natural life. For the first time, unique to this edition: Spelling and verbs modernized. Jiddu Krishnamurti (1895-1986) rose from humble beginnings to become a leading spiritual and philosophical thinker. His works continue to influence thousands of people around the world; Joseph Campbell, Alan Watts, Eckhart Tolle and Deepak Chopra have all been indebted to him. And yet he belonged to no religion, sect or country. Nor did he subscribe to any school of political or ideological thought. On the contrary, Krishnamurti maintained that these are the very factors that divide human beings and bring about conflict and war – an approach that makes his teachings particularly appealing in our own times. *The Flight of the Eagle* is regarded as one of Krishnamurti's key works, grappling with themes such as freedom, change, peace, violence and – finally – the transcendental and the unknown.

And, in the shadow of the major civilization, before it disappeared in its turn, how many other cultures have perished without a trace? This immense tragedy is being lived now by many cultures, with great intensity. One has to belong to such a culture in course of extinction or dying slowly even before its flourishing, to understand the infinite distress of those who are helplessly watching the inexorable disappearance of their most precious values. With each dying culture, it is a unique flower that is withering never to bloom again, an incomparable fragrance that fades away forever. There is in the smallest idioms, there is in the "Weltanschauung" of the smallest tribe doomed to extinction treasures of wisdom and poetry. Lost...lost for all eternity. In the life of peoples, as in the whole Creation, the most striking thing that actually shocks the mind is the infinite waste of Nature. Those who at present are fortunate enough to belong to the universal cultures, may still live with the illusion of their perpetuity. But for how long? Indeed what is left of Ancient Egypt, of Mesopotamia, of Crete, of Mexico and of Peru? And how can we be sure that our conceited race that for centuries extends its domination over peoples and things will not also fall one day in torpor and become apathetic? This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

The NATO ARW on the problems of ground-based observations of Solar Eclipses was held in Sinaia (Romania) between 1 and 5 June 1996. The Workshop was divided into seven sessions, in which 17 papers were given, by key speakers, along with 30 oral presentations. Additionally, 30 posters were presented. This issue contains only the invited and oral papers. The posters are to be published in a special issue of the *Romanian Astronomical Journal*. The contributions were based on our present knowledge of solar corona physics and on the perspectives for future total eclipse observations, focussing especially on that of August 11, 1999, which will be the last eclipse of the century. The workshop sessions reviewed the results of past eclipse observations, coronal hot and cold structures, coronal heating, public education, and instrumental problems. At the end of the meeting a fruitful general discussion drew out problems to be studied and techniques to be used for forthcoming observations. Posters completed the workshop contributions.
