Welcome to the world of Scrabblegrams, puzzles that offer up all the fun of America's favorite word game, without the board or tiles. Scrabblegrams is a single-player game that takes just minutes to play, and you can take it with you anywhere; to the beach or on a train, to the dentist's office or on a plane. Each Scrabblegrams puzzle includes four sets of seven jumbled letters - just like a rack of Scrabble tiles. Within the time allotted, reshuffle the letters to spell out words, trying to find those with the highest point score. To see how you did, tally your points and turn to the solutions in the back of the book, where you'll find the words with the highest score for each puzzle. There's more than one solution to every puzzle, and testing yourself against the highest possible score is part of the fun.

Bruges was undoubtedly one of the most important cities in medieval Europe. Bringing together specialists from both archaeology and history, this 'total' history presents an integrated view of the city's history from its very beginnings, tracing its astonishing expansion through to its subsequent decline in the sixteenth century. The authors' analysis of its commercial growth, industrial production, socio-political changes, and cultural creativity is grounded in an understanding of the city's structure, its landscape and its built environment. More than just a biography of a city, this book places Bruges within a wider network of urban and rural development and its history in a comparative framework, thereby offering new insights into the nature of a metropolis.

A comprehensive and self-contained introduction to Gaussian processes, which provide a principled, practical, probabilistic approach to learning in kernel machines. Gaussian processes (GPs) provide a principled, practical, probabilistic approach to learning in kernel machines. GPs have received increased attention in the machine-learning community over the past decade, and this book provides a long-needed systematic and unified treatment of theoretical and practical aspects of GPs in machine learning. The treatment is comprehensive and self-contained, targeted at researchers and students in machine learning and applied statistics. The book deals with the supervised-learning problem for both regression and classification, and includes detailed algorithms. A wide variety of covariance (kernel) functions are presented and their properties discussed. Model selection is discussed both from a Bayesian and a classical perspective. Many connections to other well-known techniques from machine learning and statistics are discussed, including support-vector machines, neural networks, splines, regularization networks, relevance vector machines and others. Theoretical issues including learning curves and the PAC-Bayesian framework are treated, and several approximation methods for learning with large datasets are discussed. The book contains illustrative examples and exercises, and code and datasets are available on the Web. Appendixes provide mathematical background and a discussion of Gaussian Markov processes.

Tall Tales was an innovative newspaper strip syndicated internationally by the New York Herald Tribune from 1957 to 1963. Whereas newspaper strips are square, single-panel or multiple-panel horizontal gag cartoons, Al Jaffee, known for the Fold-In in MAD Magazine, once again altered the format of his work to create a vertical strip—the first, and last, in newspaper history. Tall Tales contains the best 120 wordless strips out of over 2,200, scanned from the original files. The book features a new preface by Jaffee and an introduction by Stephen Colbert of The Colbert Report. "Al Jaffee is the cartoonist's cartoonist. He's a pioneer in every field, from comic books to book illustration to magazine cartoons. The worst thing about Jaffee is that every time I do a drawing, I find out he's done it before . . . and better.†?—Sergio Aragonés, cartoonist "This collection proves that not only has Al Jaffee always been funny, he's always been disturbed.†? — Stephen Colbert, from his introduction

Music therapists from around the world working in conventional and unconventional settings have offered their contributions to this exciting new book, presenting spirited discussion and practical examples of the ways music therapy can reflect and encourage social change. From working with traumatized refugees in Berlin, care-workers and HIV/AIDS orphans in South Africa, to adults with neurological disabilities in south-east England and children in paediatric hospitals in Norway, the contributors present their global perspectives on finding new ways forward in music therapy. Reflecting on traditional approaches in addition to these newer practices, the writers offer fresh perceptions on their identity and role as music therapists, their assumptions and attitudes about how music, people and context interact, the sites and boundaries to their work, and the new possibilities for music therapy in the 21st century. As the first book on the emerging area of Community Music Therapy, this book should be an essential and exciting read for music therapists, specialists and community musicians.

It'd be hard to find anyone interested in comic books and their history who hasn't heard of Todd McFarlane's legal woes, but very few outside of McFarlane's immediate circle know just how many legal fights he was facing as the 1990s closed. Virtually all of McFarlane's court cases came down to three decisions, made by him alone. The first was to name a mobster in his Spawn comic after a hockey player, Tony Twist. The second was to hire Neil Gaiman to write a single issue of Spawn and the third came when he decided to buy all the remaining assets from Eclipse Comics at their bankruptcy sale. The first decision led to the Tony Twist trial, last two choices lead to Neil Gaiman filing suit and, ultimately, winning a portion of the Spawn universe and the hotly sought after, by some, character Miracleman. The Tony Twist trial was the beginning of a long, long period of uncertainty for Todd McFarlane and very nearly brought down the empire that he'd worked so hard to build. At its worst point, McFarlane was fighting to save his companies, to keep his characters and simply to survive. He was facing battles from several fronts, from people he did not previously personally know in the form of Tony Twist, to those whom he'd collaborated with, in the form of Neil Gaiman and also in bankruptcy courts. Clearly the fight that cost him the most, in pure financial terms, was that brought against him by Tony Twist. It would take years, and millions of dollars, to finally resolve. But the fight that potentially hurt him the most, both personally and professionally, was the one brought by Gaiman, as it gave the impression that McFarlane had appropriated characters created by Gaiman (albeit within the confines of the Spawn universe, along with Miracleman - but that's a book in itself) without proper accounting, permission or payments. This, to the comic book industry at large, showed McFarlane to be no better than the corporations that he'd spent years rallying against - Marvel and DC Comics. It would take the better part of two decades before McFarlane would emerge free and clear from these fights. He came out of it battered, bruised, facing charges of hypocrisy and with a serious hit to his reputation, but he wasn't totally beaten. Despite those who wished to see McFarlane fall completely from grace, he emerged relatively intact.
