"Analysing Variation in English brings

together a range of perspectives on the collection, analysis and broader relevance of variable language data. In the first half of the book, the focus is firmly on the description and comparison of methods for collecting and analysing examples of variation in language. Novel quantitative and computational methods are introduced and exemplified alongside more traditional approaches. The innovative second half of the book establishes and tests the relevance of language variation to other aspects of linguistics such as language change, and

to other disciplines such as law and education. Each chapter concludes with a 'Where next?' section, providing guidance on further reading, but also pointers to under-researched areas, designed to help identify good topics for projects and dissertations. Designed to be used by students as well as researchers, the book will be welcomed by those working in English language and linguistics, sociolinguistics or language change"--

The Routledge International Companion to Gifted Education is a ground-breaking collection of fully-referenced chapters written by many of the most highly-respected authorities on the subject from around the world. These fifty contributors include distinguished scholars who have produced many of the most significant advances to the field over the past few decades, like Joseph Renzulli and Robert Sternberg, alongside authorities who ask questions about the very concepts and terminology embodied in the field – scholars such as Carol Dweck and Guy Claxton. This multi-faceted volume: highlights strategies to support giftedness

in children, providing ideas that work and weeding out those that don't; is written in jargon-free language in an easy-to use themed format; is the most authoritative collection of future-focused views, ideas and reflections, practices and evaluations yet produced; includes chapters dealing with the major controversies and concerns in the field today, from the problems of identification to changing understandings of giftedness and creativity. The international aspect of the Companion, and its juxtaposition of points of view – whereby chapters are deliberately positioned and accompanied by editorial commentary to highlight the contrasts with each other – ensures that different views are addressed, allowing the reader to absorb and reflect upon the many perspectives on each issue. The Companion is a guide to the new ideas and controversies that are informing gifted education discussion and policy-making around the world. It is a first class resource to students and researchers alike.

This is a pioneer theoretical study of

diplomacy from the viewpoint of political science. It defines diplomacy precisely, and distinguishes it from the other institutions with which it is often confused. The work commences with a historical analysis of diplomacy through the ages in order to afford a theoretical description of the concept. After defining the term, Calvet de Magalhaes goes on to examine the value of current ideas concerning diplomacy. He also describes deviations from normal diplomatic practice, such as backchannel diplomacy, combat diplomacy, and espionage. The work concludes with a detailed precis of the different elements of diplomatic activity.

The games in this book offer a valuable source of activities, exercises and strategies for parents, group leaders, people planning parties, travellers or anyone wishing to enliven any occasion they choose. These games are accessible to all, as they can be used with different levels of skill. The ability of many of our games to help people relax socially on both a one-to-one basis and with a group, encourages the use of games by teachers

and group leaders. Accompanying notes are provided, outlining the value of the game in different developmental directions.

Between 1989 and 2004, the EU's conditionality for membership transformed Central and East Europe. The EU had enormous potential power over the whole range of domestic politics in the candidate countries. However, the EU was able to use that power at a few key points in the process leading to their accession. The EU's long-term influence worked primarily through soft power and through voluntary rather than coercive means. During the membership preparations, the EU built many different routes of influence into the candidate countries' domestic policy-making through 'Europeanization'. The Central and East Europeans voluntarily took on the Union's norms and methods, guided by the European Commission, in a massive transfer of policies and institutions. However, the EU missed important opportunities to effect change as well. The EU's Transformative Power explores in detail how the EU used its

influence to control the movement of people across Europe, through both coercive use of conditionality and voluntary methods of Europeanization. *Organizational DYNAMICS* Addison Wesley Publishing Company

An internationally renowned author offers an overview of how people and jobs can best be connected in a new era. 'Beyond the Team' draws on Meredith Belbin's extensive work with organizations worldwide to give further insights into the workings of teams and groups. The modern job needs to be actively interpreted and constantly revised in terms of the balance between a team role, a work role and a professional role. The increasingly complex demands of modern jobs can be aided by a colour system as tested in international trials. A colour based top down, bottom up form of communication creates sensitive feedback with a special value where members of a workforce do not share common language. The socially complex nature of communication about work in a new era offers parallels with the intricacies of the social insect world. Information technology is extending human networking with the

potential of creating a form of organization closer to what can be achieved in superorganisms. 'Beyond the Team' shows how eventually, the mature team can learn to distribute work between its own members by giving a comprehensive understanding of how to manage both team roles and work roles.

Advances in Healthcare Technology Routledge

This book presents a bold new theory of the processes of collective decision-making that draws on theoretical influences ranging from group decision theory through to the authors' own social representations theory. Moscovici and Doise offer a novel analysis of group conflict and the construction of consensus to produce a general theory of collective decisions. Going beyond the traditional view that compromise is a negative process where group members merely comply in order to sustain cohesion, the authors argue that the conflict at the root of group decisions can be a positive force leading to changes in opinion and to innovation. Their theoretical framework is illustrated in depth with numerous empirical investigations from Organizational Climate and Culture Harper Collins

The Psychology of Intelligence Rowman & Littlefield Publishers

The premise of this book is, simply, that politicians matter, that an understanding of the role played by politicians in the way that politics is carried out in their countries

is, far from constituting a resurrection of outdated elitist theories, of vital importance in present-day Latin America. pioneering field research on the opinions of Latin American legislators in 17 countries, they focus on two broad topics: political systems, as reflected in politicians' perspectives on the democracies and party organizations of which they are a part; and the role played by ideology, not only in shaping positions on issues, but also as a factor that gives coherence to parties. Their seminal work is central to the current political dynamics in the region, as well as to broader debates in political science.

The SAGE Handbook of Organizational Communication SAGE

Sponsored by the Society for Industrial and Organizational Psychology, a division of the American Psychological Association. Reveals how examining climate and culture together can advance understanding of the behavior of individuals within organizations, as well as overall organizational performance in such diverse areas as financial planning, marketing, and human resource development.

Manual of Neurologic Therapeutics Addison Wesley Publishing Company This book explores the process of interpersonal conflict - from the initial decision as to whether or not to confront differences through to how to plan the actual confrontation. It deals extensively with negotiation and, where negotiation proves unsuccessful, with third-party dispute resolution. To avoid destructive or violent behaviour, Donohue emphasizes the importance of keeping conflicts under control and of focusing on the pertinent issues. He argues that the key to managing conflict is to address differences collaboratively so that the parties can create better solutions and, ultimately, strengthen their relationships.

Banderia apud Grunwald Springer The efforts of Indians in Latin America have gained momentum and garnered increasing attention in the last decade as they claim rights to their land and demand full participation in the political process. This issue is of rising importance as ecological concerns and autochthonous movements gain a foothold in Latin America, transforming the political landscape into one in which multiethnic

democracies hold sway. In some cases, these movements have led to violent outbursts that severely affected some nations, such as the 1992 and 1994 Indian uprisings in Ecuador. In most cases, however, grassroots efforts have realized success without bloodshed. An Aymara Indian, head of an indigenous-rights political party, became Vice President of Bolivia. Brazilian lands are being set aside for indigenous groups not as traditional reservations where the government attempts to 'civilize' the hunters and gatherers, but where the government serves only to keep loggers, gold miners, and other interlopers out of tribal lands. Contemporary Indigenous Movements in Latin America is a collection of essays compiled by Professor Erick D. Langer that brings together-for the first time-contributions on indigenous movements throughout Latin America from all regions. Focusing on the 1990s, Professor Langer illustrates the range and increasing significance of the Indian movements in Latin America. The volume addresses the ways in which Indians have confronted the political, social, and economic problems they face today, and shows the diversity of

the movements, both in lowlands and in highlands, tribal peoples, and peasants. The book presents an analytical overview of these movements, as well as a vision of how and why they have become so important in the late twentieth century. Contemporary Indigenous Movements in Latin America is important for those interested in Latin American studies, including Latin American civilization, Latin American anthropology, contemporary issues in Latin America, and ethnic studies.

The Body Electric tells the fascinating story of our bioelectric selves. Robert O. Becker, a pioneer in the field of regeneration and its relationship to electrical currents in living things, challenges the established mechanistic understanding of the body. He found clues to the healing process in the long-discarded theory that electricity is vital to life. But as exciting as Becker's discoveries are, pointing to the day when human limbs, spinal cords, and organs may be

regenerated after they have been damaged, equally fascinating is the story of Becker's struggle to do such original work. The Body Electric explores new pathways in our understanding of evolution, acupuncture, psychic phenomena, and healing.

European Military Culture and Security Governance Nelson Thornes

This book offers the first systematic, comparative analysis of military education and training in Europe within the context of the post-Cold War security environment. Based on an analysis of military education institutions in the UK, Germany, Finland, Romania and the Baltic States, this book demonstrates that the convergence of European military cultures since the end of the Cold War is linked to changes in military education. The process of convergence originates, at least in part, from the full or partial adoption of a new concept by post-commissioning professional military education institutions: the National Defence University. Officers are now educated alongside civilians and public servants, wherein they enjoy a socialization

experience that is markedly different from that of previous generations of European officers, and is increasingly similar across national borders. In addition, this book argues that with the control over the curricula and graduation criteria increasingly set by civilian higher education authorities, the European armed forces, while continuing to exist, and hold significant (although declining) capabilities, stand to lose their status as a profession in the traditional sense. This book will be of much interest to students of military, European security policy, European politics, and IR in general.
