An engaging exploration of the legal and policy questions surrounding U.S. national security and international travel

Today, when a single person can turn an airplane into a guided

missile, no one objects to rigorous security before flying. But can the state simply declare some people too dangerous to travel, ever and anywhere? Does the Constitution protect a fundamental right to travel? Should the mode of travel (car, plane, or boat) or itinerary (domestic or international) make a constitutional difference?

This book explores the legal and policy questions raised by government travel restrictions, from passports and rubber

stamps to computerized terrorist watchlists. In tracing the history and scope of U.S. travel regulations, Jeffrey Kahn begins with the fascinating story of Mrs. Ruth Shipley, a federal employee who almost single-handedly controlled access to passports during the Cold War. Kahn questions how far national security policies should go and whether the government should be able to declare some individuals simply too dangerous to travel. An expert on constitutional

law, Kahn argues that U.S. citizens' freedom to leave the country and return is a fundamental right, protected by the Constitution.

In the current fiscal environment of reduced federal budgets, the

ability for small businesses to grow and win more government work, both as a prime contractor and as a subcontractor, is becoming more and more difficult. Gone are the days when a small business could rely on winning small business set asides or being added to a large company team just because of their socioeconomic status without solid marketing and capture activities. My background is in the federal market space, specifically Intelligence

and Department of Defense. Therefore, I will commonly refer to marketing as the business development process or a structured capture process that I feel is needed by any small businesses to win work in the federal market space.

This book provides readers with an overview of proposal writing today—along with the issues that influence the resources and methods used to develop them. A focus on the real-world of

business presents further insight and guidance in acquiring the basic skills, and some advanced, in creating any type of proposal. Chapter topics include marketing strategy, writing, graphics, sales letters and the executive summary, formal and informal documents, reviews, and editing. For the skilled professionals already in this field, affecting the bottom-line profit of their companies, seeking additional training or a valuable reference for producing persuasive and

winning proposals. Hearing Before the Subcommittee on Clean Air, Climate Change, and Nuclear Safety and [sic] the Committee on Environment and Public Works, United States Senate, One Hundred Eighth Congress, First Session, September 24, 2003 BookRix
Written by experts on the frontlines, Investigating Internet Crimes provides seasoned and new investigators with the background and tools they need to investigate crime occurring in the

online world. This invaluable guide provides step-by-step instructions for investigating Internet crimes, including locating, interpreting, understanding, collecting, and documenting online electronic evidence to benefit investigations. Cybercrime is the fastest growing area of crime as more criminals seek to exploit the speed, convenience and anonymity that the Internet provides to commit a diverse range of criminal activities. Today's online crime includes

attacks against computer data and systems, identity theft, distribution of child pornography, penetration of online financial services, using social networks to commit crimes, and the deployment of viruses, botnets, and email scams such as phishing. Symantec's 2012 Norton Cybercrime Report stated that the world spent an estimated \$110 billion to combat cybercrime, an average of nearly \$200 per victim. Law enforcement agencies and corporate security

officers around the world with the responsibility for enforcing, investigating and prosecuting cybercrime are overwhelmed, not only by the sheer number of crimes being committed but by a lack of adequate training material. This book provides that fundamental knowledge, including how to properly collect and document online evidence, trace IP addresses, and work undercover. Provides step-by-step instructions on how to investigate crimes online Covers how

new software tools can assist in online investigations Discusses how to track down, interpret, and understand online electronic evidence to benefit investigations Details guidelines for collecting and documenting online evidence that can be presented in court

Environmental Impact Statement Shipley Associates

A down economy occurs when too many businesses see incoming orders shrink too much. But always, among the 29

million firms that comprise our marketplace, some businesses will be doing well. In the past, we devised a way to find them, fund them, and begin the healing process. Nobody knows, regardless of studies or the number of degrees held, who those firms or business sectors, in aggregate, are. But our government, invariably, selects some, presents them with tax money as stimulus, and the economy continues to sleep. The money was wasted and no national or

market purpose was served. Citizen-households, in dealing with all 29 million businesses, unintentionally are funding those poised for growth -- and at no cost to taxpayers. The private sector has 132 million citizen-households that spend money to buy an infinite variety of products or services, every day, that they need or desire from those businesses. And that money, secondarily, is finding all of the firms peculiarly poised for growth and is

feeding them. With time, the market will heal and grow if government does nothing. But government can shorten the period of distress: Remove business-retarding regulations. And it can shorten it much further if the private sector, additionally, is allowed to retain a little more of its tax money -- to further stimulate those poised. To make the nation's period of economic distress the absolute shortest, the government has to do this: Give all private sector businesses more

money (lower tax rates with no time limit), remove any regulatory stumbling blocks to business (for example, let drilling begin on federal land), give the private citizens more money to spend (lower tax rates with no time limit), and stand back. The widespread distribution of funding will find those elements that are poised for growth, and if enough elements are found, the correction will begin - and continue, like the falling of dominoes. Government can't do anything more. If

the market isn't ready, it may take more time, and permanence of all the actions is required. Today, world-wide, economies are in turmoil; our consumers' money could find some businesses, poised, that left for foreign shores early on, now ready to return.
