Macbeth is Book One in the eight-book series called Shakespeare At Home. Carmen Khan and Jack Armstrong, in their thirty years at The Philadelphia Shakespeare Theatre, have created dozens of Shakespeare productions. Time and again they have seen that, although there are already several major editions of these luminous classics in print, each with its own valuable contribution to make, there is none that provides everything the reader needs to understand the play. So, they have created their own edition, from a director's viewpoint, which distills their detailed notes on every line of the play - what is being said, why it's being said, what the drama of the scene is, and why Shakespeare included it. In other words, everything you need, whether to perform the play in front of an audience of thousands, or just to read it to yourself. The Shakespeare At Home series is an ideal addition to the libraries of homeschooling parents as well any school library.

Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemists so they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes.
