How Do We Halve Our Freshwater Abstractions Sustainably by 2050? LAP Lambert Academic Publishing

This Data Gap Analysis report documents the results of a study conducted by Washington Closure Hanford (WCH) to compile and reiew the currently available surface water and sediment data for the Columbia River near and downstream of the Hanford Site. This Data Gap Analysis study was conducted to review the adequacy of the existing surface water and sediment data set from the Columbia River, with specific reference to the use of the data in future site characterization and screening level risk assessments.

Information Review and Gap Analysis Wageningen Academic Publishers
 Construction industry is an integral part of infrastructure sectors, like irrigation, roads, transportation, telecommunications and energy, which lead to economic growth & development of the country. GAP Analysis is an important method for identification organizational & operational

policy, practices & their effectiveness against EHSMS programme. It is meant to identify the basic direction as well as specific area of action where environment of the site & safety performance has to be improved. It is also tool for ensuring, that the site's operation & maintenance procedure match the intent & the standards. GAP Analysis seeks to review operating procedures & identify steps & methods that can be changed so as to reduce environment & safety problems by reviewing adequacy of maintenance & environment, safety inspection. Improving the EHS standards & practices, results in pollution & accident free work environment, saves valuable human life & company's property & time. It is therefore essential to conduct a GAP Analysis at intervals of predetermined period. In this book we have presented a GAP analysis report of a road project.

The IMF Fiscal Affairs Department's Revenue Administration Gap Analysis Program (RA-GAP) assists revenue administrations from IMF member countries in monitoring taxpayer compliance through tax gap analysis. The RA-GAP analytical framework for estimating excise gaps presented in this Technical Note sets out the steps and data required for comprehensive top-down gap

estimates based on a comparison of actual collections to potential collections, which is estimated from consumption (or use) and expenditure of excise commodities. The note outlines the motivation for, and different approaches to, excise gap estimation; and identifies the design criteria for robust gap estimates. The note was jointly produced by RA-GAP team and the Slovak Republic's Institute for Financial Policy, piloting the framework for the mineral oils excise gap in Slovakia.

literature review and gap analysis : final report National Academies Press

To feed a world population that will exceed 9 billion by 2050 requires an estimated 60% increase over current primary agricultural productivity. Closing the common and often large gap between actual and attainable crop yield is critical to achieve this goal. To close yield gaps in both small and large scale cropping systems worldwide we need (1) definitions and techniques to measure and model yield at different levels (actual, attainable, potential) and different scales in space (field, farm, region, global) and time (short and long term); (2) identification of the causes of gaps between yield levels; (3) management options to reduce the gaps where feasible and (4) policies to favour adoption of sustainable gap-closing solutions. The aim of this publication is to critically

review the methods for yield gap analysis, hence addressing primarily the first of these four requirements, reporting a wide-ranging and well-referenced analysis of literature on current methods to assess productivity of crops and cropping systems.

International Monetary Fund

There is a pressing need for developing and testing a general set of theories in order to provide a confident basis for prediction of multiple stressor effects. Confident prediction is central to confident decision making in water pollution control. Consequently, WERF commissioned this study, which has as its goal to provide a study design based on good science that helps establish a general, conceptual approach to multiple stressors. The objectives addressed in this report are: (1) review and critique the existing body of knowledge for multiple stressors; (2) develop a searchable, annotated bibliography of multiple stressor research; and, (3) identify gaps in the body of knowledge. A rigorous, theoretical basis for the prediction of multiple stressor effects could not be developed from the literature on experimental studies of multiple stressor effects in aquatic ecosystems. Despite the wealth of observational data, the existence of several useful tools for interpretation of cause/effect relationships (including formal Stressor Identification methods), and the studies reviewed in this report, there are no tools that allow a confident, a priori, prediction of ecosystem response to multiple stressors. The current literature provides, at best, a series of site-specific glimpses of the response of ecological communities and ecosystems to multiple stressors. There is seldom, if ever, any reference to a more generalized model of multiple stressor effects apart from the discussion of the expectations regarding additivity versus synergism. Many articles that purport to be multiple stressor studies do not go beyond an inventory of the various stresses and upsets affecting the ecosystem, without attempting to assess the interactions among them.

Physician workforce in Canada Intl Food Policy Res Inst

The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) began 40 years ago as a pilot program and has since grown to serve over 8 million pregnant women, and mothers of and their infants and young children. Today the program serves more than a quarter of the pregnant women and half of the infants in the United States, at an annual cost of about \$6.2 billion. Through its contribution to the nutritional needs of pregnant, breastfeeding, and post-partum women; infants; and children under 5 years of age; this federally supported nutrition assistance program is integral to meeting national nutrition policy goals for a significant portion of the U.S. population. To assure the continued success of the WIC, Congress mandated that the Food and Nutrition Service of the U.S. Department of Agriculture (USDA) reevaluate the program's food packages every 10 years. In 2014, the USDA asked the Institute of Medicine to undertake this reevaluation to ensure continued alignment with the goals of the Dietary Guidelines for Americans. In this third report, the committee provides its final analyses, recommendations, and the supporting rationale.

The must-read summary of Tony Wagner's book: "The Global Achievement Gap: Why Even Our Best School Don't Teach the New Survival Skills Our Children Need - And What We Can Do About it". This complete summary of "The Global Achievement Gap" by Tony Wagner outlines the author's argument that there is a disconnect between what schools are providing students - passive learning experience and what employers are looking for - critical thinkers and problem solvers. He also recommends ways to motivate the future generation to succeed in today's world. Added-value of this summary: • Save time • Understand how the education system could be reformed to better serve the job market • Expand your knowledge of American politics and social services To learn more, read "The Global Achievement Gap" and discover how simple educational reforms could help young people to achieve their full potential, and contribute to a strong economy and vibrant democracy.

Socio-economic Baseline Review Methodology and Data Gap Analysis for Offshore Renewables in Scottish Waters Kamloops, B.C. : FORREX

This dissertation is comprised of three manuscripts exploring the integration of simulation with system-based improvement strategies and specifically with gap analysis. The first manuscript presents a review of literature regarding the incorporation of simulation with system-based improvement strategies to identify safety risks that could lead to patient harm. Further research concentrating on simulation with these improvement strategies is warranted to build the body of literature in order to support its integration. This manuscript will be submitted to the Journal of Patient Safety and Quality Improvement. The second manuscript is a report of the results of a

descriptive qualitative study that explored integrating simulation with gap analysis to discover safety risks using falls as an exemplar. The Donabedian Model of Patient Safety, which depicts relationships that impact patient safety, guided the analysis. Five gaps between actual and desired practice were discovered along with five themes related to barriers in executing best practices. Findings of the study supported the use of simulation with the gap analysis strategy to discover latent risks that may not otherwise be found using conventional methods. This manuscript will be submitted to the Simulation in Healthcare Journal. The third manuscript is a description of the process for integrating simulation with gap analysis. The manuscript is organized by three out of the four critical steps for conducting a gap analysis. Key actions and recommendations derived from previous studies are also described. Additionally, two lessons learned from this author's study are also provided to help guide future research regarding integrating simulation with gap analysis. KEYWORDS: Simulation; System-Based Improvement Strategies; Patient Safety; Gap Analysis; Hospital.

Globally recognized and backed by the Cloud Security Alliance (CSA) and the (ISC)2 the CCSP credential is the ideal way to match marketability and credibility to your cloud security skill set. The Official (ISC)2® Guide to the CCSPSM CBK® is your ticket for expert insight through the 6 CCSP domains. You will find step-by-step guidance through real-life scenarios, illustrated examples, tables, best practices, and more. Sample questions help you reinforce what you have learned and prepare smarter. Easy-to-follow content guides you through • Major topics and subtopics within the 6 domains • Detailed description of exam format • Exam registration and administration policies Reviewed by cloud security experts, and developed by (ISC)2, this is your study guide to fully preparing for the CCSP and reaffirming your unique cloud security skills. Get ready for the next step in your career with Official (ISC)2 Guide to the CCSP CBK.

Precision agriculture '19 Primento

Precision agriculture is a reality in agriculture and is playing a key role as the industry comes to terms with the environment, market forces, quality requirements, traceability, vehicle guidance and crop management. Research continues to be necessary, and needs to be reported and disseminated to a wide audience. These proceedings contain reviewed papers presented at the 12th European Conference on Precision Agriculture, held at Montpellier SupAgro, France. The papers reflect the wide range of disciplines that impinge on precision agriculture - technology, crop science, soil science, agronomy, information technology, decision support, remote sensing and others. The broad range of research topics reported will be a valuable resource for researchers, advisors, teachers and professionals in agriculture long after the conference has finished.

Tips, Tools, and Intelligence for Trainers FT Press

"TRB's Hazardous Materials Cooperative Research Program (HMCRRP) Report 9: A Compendium of Best Practices and Lessons Learned for Improving Local Community Recovery from Disastrous Hazardous Materials Transportation Incidents explores how local communities can develop or improve recovery planning and operations in response to hazardous materials transportation incidents"--Publisher's description.

Preparation for the TOGAF 9 Part 2 Examination Routledge

The TOGAF 9 certification program is a knowledge-based certification program. It has two levels, leading to certification for TOGAF 9 Foundation and TOGAF 9 Certified, respectively. The purpose of certification to TOGAF 9 Certified is to provide validation that, in addition to the knowledge and comprehension of TOGAF 9 Foundation level, the Candidate is able to analyze and apply this knowledge. The learning objectives at this level therefore focus on application and analysis in addition to knowledge and comprehension. This Study Guide supports students in preparation for the TOGAF 9 Part 2 Examination, leading to TOGAF 9 Certified. This third edition contains minor updates to remove references to the TOGAF 8-9 Advanced Bridge Examination¹ and also adds four bonus practice examination questions to Appendix B. It gives an overview of every learning objective for the TOGAF 9 Certified Syllabus beyond the Foundation level.

Conducting a front-end analysis (FEA) will help determine performance or training solutions. This Infoline will show the important link between performing a comprehensive FEA and determining the most effective training or performance solution.

Mind the Gap Van Haren

Health Impact Assessment (HIA) is primarily concerned with the future consequences of plans, proposals and policies on the health of communities. It is a rapidly growing complement to

Environmental Impact Assessment, increasingly mandated by national and international requirements. Guidelines have been produced by many national and international organizations and it is being introduced in a number of undergraduate or postgraduate university curricula. However, there has been until now no broad-based, introductory text of international scope to the subject, suitable for both these courses and for professional training. The purpose of this book is to fill this gap and to introduce the subject of Health Impact Assessment using plain language, in both general and specific contexts and with reference to both market and less developed economies. As a result, the reader should be able to describe what HIA can and cannot achieve, identify the components of a successful HIA and participate in an assessment as a member of a team. Examples are provided from a number of planning and development sectors, including extractive industry, water resource management, and housing. The reader, whether student or professional, need not be a health specialist, although prior knowledge of some public or environmental health would be an advantage.

Scientific Review and Gap Analysis of Sustainable Forest Management Criteria and Indicators Initiatives Transportation Research Board

Every business needs to accurately assess its own strengths and weaknesses against their competitors, direct or indirect, in order to create a winning strategy. Mind the Gap introduces the author's tried and tested strategic model, the Dice Matrix, which will enable you to do just that. This simple business tool will allow you to stress test your weaknesses, compare your performance against customers' perception and also highlight the strengths you provide as a business. You can input your own set of criteria to gain a valuable, tailored overview of the necessary actions to achieve success. Using examples and evidence collected from over 100 experts from a variety of business sizes and types, the author provides groundbreaking insights into key issues and challenges, from customer needs to market perception. Mind the Gap provides the essential tools required for any Business Owner, Director or Manager to implement a detailed gap analysis of their business and to create a strategic plan for long-lasting growth and success.

Water Quality Modelling in the Great Barrier Reef City of Seattle Code ReviewFinal Gap Analysis ReportAIR ReviewGap Analysis and Summary ReportFramework for Determining Research Gaps During Systematic ReviewEvaluation

Gaps have attracted the attention of market technicians from the earliest days of charting. They're not merely conspicuous: they represent price jumps that could signal profitable trading opportunities. Until now, however, "folklore" about gap trading has been common, and tested, research-based knowledge virtually nonexistent. In Technical Analysis of Gaps, renowned technical analysis researchers Julie Dahlquist and Richard Bauer change all that. Drawing on 60 years of comprehensive data, they demonstrate how to sort "strategic" gaps from trivial ones, and successfully trade on gaps identified as significant. Building on work that recently earned them the Market Technicians Association's 2011 Charles H. Dow Award for creativity and innovation in technical analysis, Dahlquist and Bauer offer specific gap-related trading tips for stocks, futures, and options. They consider a wide variety of market conditions, including gap size, volume and previous price movement, illuminating their findings with easy-to-understand diagrams. Coverage includes: understanding what gaps are and how they arise; recognizing windows on candlestick charts; identifying gaps with superior profit potential; combining gaps with other technical techniques for a more complete and effective analysis; and putting it all together with real trading strategies. For stock, commodity, and currency traders in the U.S. and worldwide, and for active individual investors seeking new ways to maximize returns.

The World of Kaipara Kogan Page Publishers

Practical Mapping for Applied Research and Program Evaluation is the first book to bring the mapping methodology to social research and program evaluation. Bernadette Wright and Steven E. Wallis guide readers through all phases of the research process: learning from stakeholder experience; reviewing existing knowledge in the field; conducting new data collection such as interviews; collaborating with other researchers; and facilitating the use of knowledge for communication, collaboration, and action. With plenty of illustrations and navigational aids such as "travel tips," the book is an accessible guide for busy students, researchers, and managers of all levels of experience.

Information Review and Gap Analysis John Wiley & Sons

Discover new ideas and inspiration to build world-class Business Continuity Management from this masterwork that distills Hiles' wisdom about what works and why from 30+ years' experience in 60+ countries. First published in 1999, the new 4th Edition of Hiles' classic is the most

international, comprehensive, readable exposition on the subject. It now includes: New or revised sections: New, extensive chapter on supply chain risk – including valuable advice on contract aspects. Horizon scanning of new risks. Fresh perspectives. Multilateral continuity planning. Impact of new technologies, including mobile computing, cloud computing, bring your own device, and the Internet of things. Extensive, up-to-the-minute coverage of global/country-specific standards, with detailed appendices on ISO 22301/22313 and NFPA 1600. BCP exercising and testing. Helpful discussion on issues relating to certification professional certification. New revealing case studies and vivid examples of crises and disruptions – and effective response to them. Updated action plans and roadmaps. Proven techniques to win consensus on BC strategy and planning. Hint of the future – what's next for BCM? Demonstrates step-by-step how to build and maintain a world-class BC management system and plan. Shares field-tested tools and hard-won insights about what works and why. Chapter learning objectives, case studies and real-life examples, self-examination and discussion questions, forms, checklists, charts and graphs, glossary, index. 520-page book + hundreds of pages of Downloadable Resources, including project plans, risk analysis forms, BIA spreadsheets, BC plan formats, exercise/test material, checklists, and a variety of editable models, templates, and spreadsheets. Instructional Materials coming soon including valuable educational tools, such as syllabi, test bank, slides – for use by approved adopters in college courses and professional development training.

The identification of gaps from systematic reviews is essential to the practice of "evidence-based research." Health care research should begin and end with a systematic review. A comprehensive and explicit consideration of the existing evidence is necessary for the identification and development of an unanswered and answerable question, for the design of a study most likely to answer that question, and for the interpretation of the results of the study. In a systematic review, the consideration of existing evidence often highlights important areas where deficiencies in information limit our ability to make decisions. We define a research gap as a topic or area for which missing or inadequate information limits the ability of reviewers to reach a conclusion for a given question. A research gap may be further developed, such as through stakeholder engagement in prioritization, into research needs. Research needs are those areas where the gaps in the evidence limit decision making by patients, clinicians, and policy makers. A research gap may not be a research need if filling the gap would not be of use to stakeholders that make decisions in health care. The clear and explicit identification of research gaps is a necessary step in developing a research agenda. Evidence reports produced by Evidence-based Practice Centers (EPCs) have always included a future research section. However, in contrast to the explicit and transparent steps taken in the completion of a systematic review, there has not been a systematic process for the identification of research gaps. We developed a framework to systematically identify research gaps from systematic reviews. This framework facilitates the classification of where the current evidence falls short and why the evidence falls short. The framework included two elements: (1) the characterization the gaps and (2) the identification and classification of the

reason(s) for the research gap. The PICOS structure (Population, Intervention, Comparison, Outcome and Setting) was used in this framework to describe questions or parts of questions inadequately addressed by the evidence synthesized in the systematic review. The issue of timing, sometimes included as PICOTS, was considered separately for Intervention, Comparison, and Outcome. The PICOS elements were the only sort of framework we had identified in an audit of existing methods for the identification of gaps used by EPCs and other related organizations (i.e., health technology assessment organizations). We chose to use this structure as it is one familiar to EPCs, and others, in developing questions. It is not only important to identify research gaps but also to determine how the evidence falls short, in order to maximally inform researchers, policy makers, and funders on the types of questions that need to be addressed and the types of studies needed to address these questions. Thus, the second element of the framework was the classification of the reasons for the existence of a research gap. For each research gap, the reason(s) that most preclude conclusions from being made in the systematic review is chosen by the review team completing the framework. To leverage work already being completed by review teams, we mapped the reasons for research gaps to concepts from commonly used evidence grading systems. Our objective in this project was to complete two types of further evaluation: (1) application of the framework across a larger sample of existing systematic reviews in different topic areas, and (2) implementation of the framework by EPCs. These two objectives were used to evaluate the framework and instructions for usability and to evaluate the application of the framework by others, outside of our EPC, including as part of the process of completing an EPC report. Our overall goal was to produce a revised framework with guidance that could be used by EPCs to explicitly identify research gaps from systematic reviews.
