 Channels By K Subramanya - Engineering ...Open-channel flow is
 a flow of liquid (basically water) in a conduit with a free surface.
 That is a surface on which pressure is equal to local atmospheric

pressure. Open-channel flows are characterized by the presence of a liquid-gas interface called the free surface. Natural flows : rivers, creeks, floods, etc. OPEN-CHANNEL FLOW The surface of the flow thus formed is called a free surface, because that flow boundary is freely deformable, in contrast to the solid boundaries. The boundary conditions at the free surface of an open-channel flow are always that both the pressure and the shear stress are zero everywhere.
