Target success in AQA A-level Religious Studies with this proven formula for effective, structured revision; key content coverage is combined with exam-style tasks and practical tips to create a revision guide you can rely on to review, strengthen and test their knowledge. With My Revision Notes you can: - Plan and manage a successful revision programme using the topic-by-topic planner - Consolidate subject knowledge by working through clear and focused content coverage - Test understanding and identify areas for improvement with regular 'Now Test Yourself' tasks and answers - Improve exam technique through practice

questions, expert tips and examples of typical mistakes to avoid  
Contemporary Paradigms and Moral Strategies Routledge

This 1994 volume contains fifteen essays by leading philosophers exploring themes developed in the work of Joel Feinberg.

Moral Reasoning Yale University Press

Offering students an accessible, in-depth, and highly practical introduction to ethics, this text covers argumentation and moral reasoning, various types of moral arguments, and theoretical issues that commonly arise in introductory ethics courses, including skepticism, subjectivism, relativism, religion, and normative theories. The book combines primary sources in moral theory and applied ethics with explanatory material, case studies, and pedagogical features to help students think critically about moral issues.

Trustworthy Answers to Your Tough Questions University of

Chicago Press

An introduction to the basic issues of space ethics: the technology, the impact on society, and the frontiers of thinking about space exploration from theory to practice.

Neuroethics and Nonhuman Animals Springer Nature

From Descartes to Spinoza, Western philosophers have attempted to propose an axiomatic systemization of ethics. However, without consensus on the contents and objects of ethics, the system remains incomplete. This four-volume set presents a model that highlights a Chinese philosopher's insights on ethics after a 22-year study. Three essential components of ethics are examined: metaethics, normative ethics, and virtue ethics. This volume is the first part of the discussion on normative ethics. The author sets out to discuss morality, and shows how the reasoning behind it can be both good and bad for human society from various perspectives. A system of an ultimate standard of morality is introduced and it is shown that where there are conflicts between different moral norms that cannot be compromised, people undoubtedly sacrifice less important moral norms to follow more fundamental and important moral norms or principles. The ultimate standard of morality is also the ultimate value standard for the evaluation of the goodness or badness of state institutions. Justice is the fundamental value standard to measure state institutions. Equality is the most important justice. The Chinese version of this set sold more than 60,000 copies and has exerted tremendous influence on the academic scene in the People's Republic. The English version will be an essential read for students and scholars of ethics and philosophy in general.

**Faith and Learning** Taylor & Francis US

Confucian Reflections: Ancient Wisdom for Modern Times is about the early Chinese Confucian classic the "Analects" Lunyu, attributed to the founder of the Confucian tradition, Kongzi (551-479 bce) and who is more commonly referred to as "Confucius" in the West. Philip J. Ivanhoe argues that the Analects is as relevant and important today as it has proven to be over the course of its more than 2000 year history, not only for the people who live in East Asian societies but for all human beings. The fact that this text has inspired so many talented people for so long, across a range of complex, creative, rich, and fascinating cultures offers a strong prima facie reason for thinking that the insights the Analects contains are not bound by either the particular time or cultural context in which the text took shape.

**A Guide to Making Your Own Decisions** Gyan Publishing House

Why does American law allow the recreational use of some drugs, such as alcohol, tobacco, and caffeine, but not others, such as marijuana, cocaine, and heroin? The answer lies not simply in the harm the use of these drugs might cause, but in the perceived morality—or lack thereof—of their recreational use. Despite strong rhetoric from moral critics of recreational drug use, however, it is surprisingly difficult to discern the reasons they have for deeming the recreational use of (some) drugs morally wrong. In this book, Rob Lovering lays out and dissects various arguments for the immorality of using marijuana, cocaine, heroin, and other drugs recreationally. He contends that, by and large, these arguments do not succeed. Lovering's book represents one of the first works to systematically present, analyze, and critique

arguments for the moral wrongness of recreational drug use. Given this, as well as the popularity of the morality-based defense of the United States' drug laws, this book is an important and timely contribution to the debate on the recreational use of drugs.

#### **Human Freedom and Environment** IGI Global

The old model of lesbianism as a pathological affliction has largely given way to a liberal social scientific one which presents it as an alternative lifestyle, a way of loving, a sexual preference, or a source of personal fulfilment. This controversial book argues that the shift from pathological' to gay affirmative' research merely substitutes one depoliticized construction of lesbianism for another. The author contends that the gay affirmative model is fundamentally incompatible with radical feminist theory in which lesbianism is a political statement representing the bonding of women against male supremacy. This volume was awarded a 1989 Distinguished Publication Award by the Association for Women in Psychology.

#### **Confucian and Western Views on Childhood Development** Routledge

Contemporary Catholic Health Care Ethics, Second Edition, integrates theology, methodology, and practical application into a detailed and practical examination of the bioethical issues that confront students, scholars, and practitioners. Noted bioethicists Gerard Magill, Henk ten Have, and David F. Kelly contribute diverse backgrounds and experience that inform the richness of new material covered in this second edition. The book is organized into three sections: theology (basic issues underlying Catholic thought), methodology (how Catholic theology

approaches moral issues, including birth control), and applications to current issues. New chapters discuss controversial end-of-life issues such as forgoing treatment, killing versus allowing patients to die, ways to handle decisions for incompetent patients, advance directives, and physician-assisted suicide. Unlike anthologies, the coherent text offers a consistent method in order to provide students, scholars, and practitioners with an understanding of ethical dilemmas as well as concrete examples to assist in the difficult decisions they must make on an everyday basis.

#### Diversity and Consensus Routledge

Rubinfeld and the contributors to this collection posit that German physicians betrayed the Hippocratic Oath when they chose knowledge over wisdom, the state over the individual, a führer over God, and personal gain over professional ethics. *Ignoring Nature No More* Springer Science & Business Media Intended for use in the introduction to ethics course, *The Good Life: Options in Ethics*, Fifth Edition is designed to engage today's practical-minded student in more fundamental questions. The book ranges from ideals in living (the good) to contemporary moral problems (the right), exploring and analyzing both areas in order to stimulate deeper reflection. The first section of the book clears away the obstacles to pursuing ethical understanding - relativism, determinism, and egoism. Then traditional definitions of the good life are discussed, theories such as hedonism, self-realization, duty, evolutionism, religious ethics, and virtue ethic. The final section addresses today's social problems including abortion, euthanasia, animal welfare, capital punishment, and sexual morality. Provocative questions are raised throughout

such as "Does mutual consent legitimize any behavior or are there actions we ought not to consent to?" "Are there better and worse ways for us to enjoy ourselves?" "If self-actualization is the ideal, then can we fault Atilla the Hun or Genghis Khan for realizing themselves?"

Ignatius Press

Discusses the ethical, moral, legal, and philosophical aspects of controversial medical issues, such as abortion, euthanasia, genetic engineering, and determination of death

Families of Virtue B&H Publishing Group

Cultures and moral expectations differ around the globe, and so the management of corporate responsibilities has become increasingly complex. Is there, however, a humanistic consensus that can bridge cultural and ethnic divides and reconcile the diverse and contrary interests of stakeholders world-wide? This book seeks to answer that question.

### **The Routledge Handbook of Trust and Philosophy**

Cambridge University Press

Two dozen Christian higher education professionals thoroughly explore the question of the faith's place on the university campus, whether in administrative matters, the broader academic world, or in student life.

Health and Human Values Nova Publishers

This edited volume represents a unique addition to the available literature on animal ethics, animal studies, and neuroethics. Its goal is to expand discussions on animal ethics and neuroethics by weaving together different threads: philosophy of mind and animal minds, neuroscientific study of animal minds, and animal ethics. Neuroethical questions concerning animals' moral status,

animal minds and consciousness, animal pain, and the adequacy of animal models for neuropsychiatric disease have long been topics of debate in philosophy and ethics, and more recently also in neuroscientific research. The book presents a transdisciplinary blend of voices, underscoring different perspectives on the broad questions of how neuroscience can contribute to our understanding of nonhuman minds, and on debates over the moral status of nonhuman animals. All chapters were written by outstanding scholars in philosophy, neuroscience, animal behavior, biology, neuroethics, and bioethics, and cover a range of issues and species/taxa. Given its scope, the book will appeal to scientists and students interested in the debate on animal ethics, while also offering an important resource for future researchers. Chapter 13 is available open access under a CC BY 4.0 license at [link.springer.com](http://link.springer.com).

**National Library of Medicine Current Catalog** Rex Bookstore, Inc.

This is a vivid, thought-provoking and fascinating text on some contentious issues in contemporary medical ethics. The book acknowledges the contribution of African tradition and Western scholarship to the development of medical ethics as a university discipline. It questions the lack of consensus around such biomedical issues as euthanasia and traditional medicine. In many countries, the failure has resulted in public outcries. Its thrust centres on the nexus of practice and theory, and the importance of pragmatism and critical questioning in dealing with different cases on and around biomedicine. Its virtue is its significant shift from the traditional positions on selected biomedical issues to a more rigorous, pragmatic and critical

questioning and understanding of the reasoning and positions of all involved and/or affected parties.

**Ethics: Theory and Practice** Oxford University Press, USA

Introduction by Salvatore Engel-Di Mauro Foreword by Ariel Salleh

This book takes as its object of critique one of the best known and most influential arguments in contemporary applied ethics which is biologist Garrett Hardin's case for "lifeboat ethics." John Clark analyzes the moral dimensions of world hunger, foreign aid, immigration policy, and population growth. Clark critiques the "lifeboat ethics" as a way to explore in depth both the common and the commons. It is about the truth we hold in common, and about certain falsehoods that we hold in common. This book also contains Garrett Hardin's 1974 essay "Living on a Lifeboat" *A Bibliography of Bertrand Russell: Separate publications, 1896-1990* Springer

Ethics is a part of philosophy that is concerned with living well and choosing the right course of action. The choice of the course of action is based on moral reasoning and there is no single moral

theory on which we can base the choices that we make. The application of moral standards in life is also the concern of Ethics: Theory and Practice, which deals with moral theories in Indian and Western philosophical traditions as well as the debates that centre around their application. The book has ten chapters—the first chapter presents what morality and moral reasoning is; the second chapter is a critical survey of some popular concepts of Indian ethics; the third chapter surveys Western moral theories and the remaining seven chapters cover a variety of contemporary moral issues that are controversial as well as inescapable. They deal with issues like capital punishment, civil disobedience, euthanasia, and women's rights.

Humanistic Ethics in the Age of Globality Changing Suns Press Provides for the first time a full, descriptive bibliography of Russell's writings. Textually orientated, it will guide the scholar, collector and the general reader to the authoritative editions of Russell's works.
