 Online learning has been touted as one way of reducing the cost of higher education while simultaneously addressing the increasing demand for educational opportunity and providing access to hitherto "left out" populations. Many universities are defying tradition by offering completely online degrees for global participants. As such, research is needed to improve the design of online and virtual learning environments to ensure that they are inclusive and culturally adaptive for the global education marketplace. The *Handbook of Research on Cross-Cultural Online Learning in Higher Education* shares paradigms, perspectives, insights, challenges, and best practices for the instructional design and delivery of cross-cultural adult web-based learning experiences and examines adult learner characteristics and competencies critical for the design of these applications. The content within this publication covers trending topics including virtual learning, culturally adaptive environments, and online education and is intended for instructional designers, faculty, administrators, students, and researchers.

This book has a rather strange history. It began in Spring 1989, thirteen years after our Systems Science Department at SUNY - Binghamton was established, when I was asked by a group of students in our doctoral program to have a meeting with them. The spokesman of the group, Cliff Joslyn, opened our meeting by stating its purpose. I can closely paraphrase what he said: "We called this meeting to discuss with you, as Chairman of the Department, a fundamental problem with our systems science curriculum. In general, we consider it a good curriculum: we learn a lot of concepts, principles, and methodological tools, mathematical, computational, heuristic, which are fundamental to understanding and dealing with systems. And, yet, we learn virtually nothing about systems science itself. What is systems science? What are its historical roots? What are its aims? Where does it stand and where is it likely to go? These are pressing questions to us. After all, aren't we supposed to carry the systems science flag after we graduate from this program? We feel that a broad introductory course to systems science is urgently needed in the curriculum. Do you agree with this assessment?" The answer was obvious and, yet, not easy to give: "I agree, of course, but I do not see how the situation could be alleviated in the foreseeable future."

Training institutions offering specialized translation and interpreting programs need to keep up with the rapid development of digitalization and the increasingly sophisticated requirements of the language industry. This book addresses digital trends and employability in the market from the aspect of training: how have the latest digital trends shaped the language industry, and what competencies will translators, interpreters and T/I trainers need so as to meet current market requirements? Four major subjects of high relevance are discussed in 12 chapters: (1) collaborative partnership in the field of fit-for-market practices with a focus on e-learning materials; (2) competence development in translator and interpreter training; (3) the implications of neural machine translation and the increasing significance of post-editing practices, as well as (4) the role of new technologies and new methods in the work and training of interpreters and translators. With an introduction written by Juanjo Arevalillo, managing director of Hermes Traducciones and former vice-president of the European Union of Associations of Translation Companies, the book creates a fresh momentum for researchers, academics, professionals and trainees to be engaged in a constructive dialogue.
