Globalization of financial markets and policy changes in the regulation of financial institutions have impacted upon how commercial banks manage risk. These changes prompted an international conference in 1997, on risk management and regulation in banking. This book contains the formal papers.

Business Sustainability in Asia CRC Press

This book documents the First World Landslide Forum, which was jointly organized by the International Consortium on Landslides (ICL), eight UN organizations (UNESCO, WMO, FAO, UN/ISDR, UNU, UNEP, World Bank, UNDP) and four NGOs (International Council for Science, World Federation of Engineering Organizations, Kyoto Univ. and Japan Landslide Society) in Tokyo in 2008. The material consists of four parts: The Open Forum "Progress of IPL Activities; Four Thematic Lectures in the Plenary Symposium "Global Landslide Risk Reduction"; Six Keynote Lectures in the Plenary session; and the aims and overviews of eighteen parallel sessions (dealing with various aspects necessary for landslide disaster risk reduction such as: observations from space; climate change and slope instability; landslides threatening heritage sites; the economic and social impact of landslides; monitoring, prediction and early warning; and risk-management strategies in urban area, etc.) Thus it enables the reader to benefit from a wide range of research intended to reduce risk due to landslide disasters as presented in the first global multi-disciplinary meeting.

Making development sustainable - The Future of Disaster Risk Reduction Wiley

Over the years auditing has developed into a specialised function with complex ethical, legal and economic implications. The role of auditors in providing credibility is even more important in a society like Hong Kong, which relies heavily on its reputation as an international financial and business centre. The financial crises and accounting scandals reported in recent years, which led to economic meltdowns and massive loss in capital resources across the globe, highlights the vital role of auditors as gatekeepers and the importance of high quality auditing in ensuring corporate transparency and honest financial reporting. The third edition is thoroughly revised to take into account the new Companies Ordinance (Chapter 622, effective 2014) and Hong Kong Standards on Quality Control, Auditing, Assurance and Related Services (updated June 2014), and numerous developments of a full range of auditing topics since the previous edition, including: Auditors legal duties and liabilities Auditor quality Auditors ethical behaviour Corporate governance Statistical sampling Pitfalls in computerisation of accounting services Use of computer-assisted-audit-techniques (CAATs) Audit reporting Auditing standards Along with recent development of the profession and cutting-edge research findings, this book boldly draws on economic theories to explain aspects of auditing. Certain economic concepts that are applicable to all aspects of an audit are addressed for students and practitioners alike. By utilising graphics, tables and intriguing cases,

this book will serve as a useful companion for accounting and legal practitioners. This is also a textbook for students preparing for university studies, practical training and professional accounting examinations. At the end of each chapter, there are dozens of exercises, cases and discussion questions for the benefits of teachers, students and life-long learners. Published by City University of Hong Kong Press □□□□□□□□□□

Slope Safety Preparedness for Impact of Climate Change OCDE

Landslide Risk Management comprises the proceedings of the International Conference on Landslide Risk Management, held in Vancouver, Canada, from May 31 to June 3, 2005. The first part of the book contains state-of-the-art and invited lectures, prepared by teams of authors selected for their experience in specific topics assigned to them by the JTC-1 Committee. The second part is a selection of papers submitted to the conference, most of which serve as case-history illustrations of projects on landslide risk management. This reference work presents the current status of landslide risk management as viewed by experts from around the world.

Financial Sector Assessment Program-Basel Core Principles for Effective Banking Supervision-Detailed Assessment of Observance International Monetary Fund

270 Expert contributions on aspects of landslide hazards, encompassing geological modeling and soil and rock mechanics, landslide processes, causes and effects, and damage avoidance and limitation strategies. Reference source for academics and professionals in geo-mechanical and geo-technical engineering, and others involved with research, des International Monetary Fund

This handbook showcases the broad spectrum of diverse approaches to environmental accounting which have developed during the last 30 years across the globe. The volume covers a range of physical issues such as water, carbon and biodiversity, as well as specific accounting matters such as management control, finance and audit. Moreover, seven chapters present environmental accounting issues that arise in the regions of Africa, Asia, Europe, MENA, North America, the Pacific and South America. The handbook also highlights future challenges in all the topic areas addressed as well as introducing new topics, such as links between environmental accounting and the circular economy, and the issues associated with animal rights. Edited by leading scholars in the area and with key contributions from across the discipline, and covering a diverse range of perspectives and locations, the volume is divided into five key parts: • Part 1: Framing the issues • Part 2: Financial accounting and reporting • Part 3: Management accounting • Part 4: Global and local perspectives • Part 5: Thematic topics in environmental accounting This handbook will act as a significant publication in drawing together the history of the field and important reference points in its future development, and will serve as a vital resource for students and scholars of environmental accounting and environmental economics.

People's Republic of China-Hong Kong Special Administrative Region Thomas Telford

Rainfall-induced landslides are common around the world. With global climate change, their frequency is increasing and the consequences are becoming greater. Previous studies assess them

mostly from the perspective of a single discipline—correlating landslides with rainstorms, geomorphology and hydrology in order to establish a threshold prediction value for rainfall-induced landslides; analyzing the slope's stability using a geomechanical approach; or assessing the risk from field records. Rainfall Induced Soil Slope Failure: Stability Analysis and Probabilistic Assessment integrates probabilistic approaches with the geotechnical modeling of slope failures under rainfall conditions with unsaturated soil. It covers theoretical models of rainfall infiltration and stability analysis, reliability analysis based on coupled hydro-mechanical modelling, stability of slopes with cracks, gravels and spatial heterogenous soils, and probabilistic model calibration based on measurement. It focuses on the uncertainties involved with rainfall-induced landslides and presents state-of-the art techniques and methods which characterize the uncertainties and quantify the probabilities and risk of rainfall-induced landslide hazards. Additionally, the authors cover: The failure mechanisms of rainfall-induced slope failure Commonly used infiltration and stability methods The infiltration and stability of natural soil slopes with cracks and colluvium materials Stability evaluation methods based on probabilistic approaches The effect of spatial variability on unsaturated soil slopes and more

Landslides and Engineered Slopes. From the Past to the Future, Two Volumes + CD-ROM Geological Society of London

Managing environment, social and governance (ESG) risk, compliance risk and non-financial risk (NFR) has become increasingly critical for businesses in the financial services industry. Furthermore, expectations by regulators are ever more demanding, while monetary sanctions are being scaled up. Accordingly, ESG, Compliance and NFR risk management requires sophistication in various aspects of a risk management system. This handbook analyses a major success factor necessary for meeting the requirements of modern risk management: an institution-specific target operating model (TOM) – integrating strategy, governance & organisation, risk management, data architecture and cultural elements to ensure maximum effectiveness. Also, institutions need to master the digital transformation for their business model to be sufficiently sustainable for the years to come. This book will offer ways on how to achieve just that. The book has been written by senior ESG, Compliance and NFR experts from key markets in Europe, the U.S. and Asia. It gives practitioners the necessary guidance to master the challenges in today's global risk environment. Each chapter covers key regulatory requirements, major implementation challenges as well as both practical solutions and examples.

Rock Mechanics and Engineering Volume 5 CRC Press

This volume presents a collection of papers on techniques and case studies in land surface evaluation for engineering practice written by specialist practitioners in the field. The volume arose out of deliberations by the Second Working Party on Land Surface Evaluation set up by the engineering group of the Geological Society in January 1997 and chaired by Dr J.S. Griffiths. The book provides examples of cost-effective methods for collecting land surface and near surface data prior to carrying further detailed ground investigations of engineering sites.

Geotechnical Risk and Safety V contains contributions presented at the 5th International Symposium on Geotechnical Safety and Risk (5th ISGSR, Rotterdam, 13-16 October 2015) which was organized under the auspices of the Geotechnical Safety Network (GEOSNet) and the following technical committees of the of the International Society of Soil Mechanics and Geotechnical Engineering (ISSGME): • TC304 Engineering Practice of Risk Assessment & Management • TC205 Safety and Serviceability in Geotechnical Design • TC212 Deep Foundations • TC302 Forensic Geotechnical Engineering Geotechnical Risk and Safety V covers seven themes: 1. Geotechnical Risk Management and Risk Communication 2. Variability in Ground Conditions and Site Investigation 3. Reliability and Risk Analysis of Geotechnical Structures 4. Limit-state design in Geotechnical Engineering 5. Assessment and Management of Natural Hazards 6. Contractual and Legal Issues of Foundation and (Under)Ground Works 7. Case Studies, Monitoring and Observational Method The 5th ISGSR is the continuation of a series of symposiums and workshops on geotechnical risk and reliability, starting with LSD2000 (Melbourne, Australia), IWS2002 (Tokyo and Kamakura, Japan), LSD2003 (Cambridge, USA), Georisk2004 (Bangalore, India), Taipei2006 (Taipei, Taiwan), the 1st ISGSR (Shanghai, China, 2007), the 2nd ISGSR (Gifu, Japan, 2009), the 3rd ISGSR (Munich, Germany, 2011) and the 4th ISGSR (Hong Kong, 2013).

Landslides - Disaster Risk Reduction Routledge

2015 is a critical year for the future of sustainable development. The 2015 Global Assessment Report on Disaster Risk Reduction highlights the connections between disaster risk and development and shows that decades of experience in managing disasters and reducing climate and disaster risk have produced a wealth of knowledge and good practice which can be applied to achieve sustainable development. The reduction of poverty, the improvement of health and education for all, the achievement of sustainable and equitable economic growth and the protection of the health of the planet now depend on the management of disaster risks in the day-to-day decisions of governments, companies, investors, civil society organizations, households and individuals. Strengthened disaster risk reduction is essential to making development sustainable.

Landslide Risk Assessment Cambridge University Press

Many countries are increasingly threatened by major landslide disasters and fatalities due to extreme weather events which have major implications for public safety and the sustainability of infrastructure and the built environment. A further increase in such a trend could come from climate change. This book helps to fill in the gap due to the fact that landslide hazards are commonly not covered under the policy debate on climate change. The book highlights the importance of raising awareness to the challenges of landslide hazards due to climate impact. It provides a holistic frame for understanding the key issues and new tools that could be used to assess and manage the landslide risks. The book gathers contributions from 21 countries and regions in the form of national reports or summaries with respect to four key aspects: a) the methods used for evaluating changing weather and changing landslide patterns; b) the changing weather patterns; c) the changing landslide patterns and hazard scenarios; d) the applications to risk management and the formulation of adaptation measures. Recommendations are made for enhanced preparedness and resilience. Improved crisis management and areas for future work are suggested.

2015 Global Assessment Report on Disaster Risk Reduction International Monetary Fund

An in-depth look at how banks and financial institutions manage assets and liabilities Created for banking and finance professionals with a desire to expand their management skillset, this book focuses on how banks manage assets and liabilities, set up governance structures to minimize risks, and approach such critical areas as regulatory disclosures, interest rates, and risk hedging. It was written by the experts at the world-renowned Hong Kong Institute of Bankers, an organization dedicated to providing the international banking community with education and training. Explains bank regulations and the relationship with monetary authorities, statements, and disclosures Considers the governance structure of banks and how it can be used to manage assets and liabilities Offers strategies for managing assets and liabilities in such areas as loan and investment portfolios, deposits, and funds Explores capital and liquidity, including current standards under Basel II and Basel III, funding needs, and stress testing Presents guidance on managing interest rate risk, hedging, and securitization

Routledge Handbook of Environmental Accounting United Nations

The Global Assessment Report on Disaster Risk Reduction (GAR) is the flagship report of the United Nations on worldwide efforts to reduce disaster risk. The GAR is published biennially by the UN Office for Disaster Risk Reduction (UNDRR), and is the product of the contributions of nations, public and private risk-related science and research, amongst others. The GAR contributes to achieving the Sendai Framework for Disaster Risk Reduction and the 2030 Agenda for Sustainable Development through monitoring risk patterns and trends, as well as progress in disaster risk reduction, while providing strategic policy guidance to countries and the international community. The GAR aims to focus international attention on the issue of risk and encourage political and economic support for risk reduction.

Landslide Science and Practice CRC Press

Geotechnical Safety and Risk IV contains the contributions presented at the 4th International Symposium on Geotechnical Safety and Risk (4th ISGSR, Hong Kong, 4-6 December 2013), which was organised under the auspices of the Geotechnical Safety Network (GEOSNet), TC304 on Engineering Practice of Risk Assessment and Management and TC205 on Safety and

Geotechnical Safety and Risk V Routledge

Both financial and non-financial managers with accountability for performance at either a strategic level or for a business unit have responsibility for risk management, in terms of failing to achieve organisational objectives. Fundamentals of Enterprise Risk management is structured around four

parts and 26 self-contained chapters. Each chapter will have ample practical examples and illustrations/mini-case studies from retail, manufacturing and service industries and from the public and not-for-profit sectors to enable the reader to understand and apply the concepts in the book. People's Republic of China-Hong Kong Special Administrative Region: Financial Sector Assessment Program-Insurance Core Principles-Detailed Assessment of Observance Risk Management and Corporate Governance

Issues in Insurance and Risk Management / 2012 Edition is a ScholarlyBrief™ that delivers timely, authoritative, comprehensive, and specialized information about Risk Management in a concise format. The editors have built Issues in Insurance and Risk Management: 2012 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Risk Management in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Insurance and Risk Management: 2012 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

People's Republic of China—Hong Kong Special Administrative Region: Selected Issues International Monetary Fund

Created by the AICPA, this authoritative guide provides interpretative guidance to enable accountants to examine and report on an entity's cybersecurity risk management program and controls within that program. The guide delivers a framework which has been designed to provide stakeholders with useful, credible information about the effectiveness of an entity's cybersecurity efforts.

Landslide Risk Management International Monetary Fund

This book contains peer-reviewed papers from the Second World Landslide Forum, organised by the International Consortium on Landslides (ICL), that took place in September 2011. The entire material from the conference has been split into seven volumes, this one is the sixth: 1. Landslide Inventory and Susceptibility and Hazard Zoning, 2. Early Warning, Instrumentation and Monitoring, 3. Spatial Analysis and Modelling, 4. Global Environmental Change, 5. Complex Environment, 6. Risk Assessment, Management and Mitigation, 7. Social and Economic Impact and Policies.
