An innovative new valuation framework with truly useful economic indicators
The End of Accounting and the Path Forward for Investors and Managers shows how the ubiquitous financial reports have become useless in capital

market decisions and lays out an actionable alternative. Based on a comprehensive, large-sample empirical analysis, this book reports financial documents' continuous deterioration in relevance to investors' decisions. An enlightening discussion details the reasons why accounting is losing relevance in today's market, backed by numerous examples with real-world impact. Beyond simply identifying the problem, this report offers a solution—the Value Creation Report—and demonstrates its utility in key industries. New indicators focus on strategy and execution to identify and evaluate a company's true value-creating resources for a more

up-to-date approach to critical investment decision-making. While entire industries have come to rely on financial reports for vital information, these documents are flawed and insufficient when it comes to the way investors and lenders work in the current economic climate. This book demonstrates an alternative, giving you a new framework for more informed decision making. Discover a new, comprehensive system of economic indicators Focus on strategic, value-creating resources in company valuation Learn how traditional financial documents are quickly losing their utility Find a path forward with actionable, up-to-date information Major corporate decisions,

such as restructuring and M&A, are predicated on financial indicators of profitability and asset/liabilities values. These documents move mountains, so what happens if they're based on faulty indicators that fail to show the true value of the company? *The End of Accounting and the Path Forward for Investors and Managers* shows you the reality and offers a new blueprint for more accurate valuation.

When customers pay their bills, the person in charge receive copies of the payment receipt vouchers. Payment vouchers are documents show that money was received from customers for invoices. They show that the payment was received. The records of payment receipt vouchers are called customer payment histories. By looking at the customer payment history records, the person in charge of sale knows if

customers pay their bills on time. Each customer has a credit limit. The credit limit is the most that customer can owe and still buy from the company. If a customer owes more than the limit, the salesman cannot approve an order. However, the credit manager can approve the order if he thinks the customer will pay. Often the credit manager will call the customer and ask for some payment before the order is shipped or dispatched.
