Exploring the unintentional production of seemingly feminist outcomes In India, elite law firms offer a surprising oasis for women within a hostile, predominantly male industry. Less than 10 percent of the country's lawyers are female, but women in the most prestigious firms are significantly represented both at entry

and partnership. Elite workspaces are notorious for being unfriendly to new actors, so what allows for aberration in certain workspaces? Drawing from observations and interviews with more than 130 elite professionals, *Accidental Feminism* examines how a range of underlying mechanisms—gendered socialization and essentialism, family structures and dynamics, and firm and regulatory histories—afford certain professionals egalitarian outcomes that are not available to their local and global peers. Juxtaposing findings on the legal profession with those on elite consulting firms, Swetha Ballakrishnen reveals that parity arises not from a commitment to create feminist organizations, but from structural factors that incidentally come together to do gender differently. Simultaneously, their research offers notes of caution: while conditional convergence may create equality in ways that more targeted endeavors fail to achieve, “accidental” developments are hard to replicate, and are, in this case, buttressed by embedded inequalities. Ballakrishnen examines whether gender parity produced without institutional sanction should still be considered feminist. In offering new ways to think about equality movements and outcomes, *Accidental Feminism*

forces readers to critically consider the work of intention in progress narratives.

**Accidental Feminism** BCS, The Chartered Institute for IT Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Business continuity planning is a process of continual improvement, not a matter of writing a plan and then putting your feet up. Attempting to validate every aspect of your plan, however – particularly in a live rehearsal situation – could create a disaster of your own making. Validating Your Business Continuity Plan examines the three essential components of validating a business continuity plan – exercising, maintenance and review – and outlines a controlled and systematic approach to BCP validation while considering each component, covering methods and techniques such as table-top reviews, workshops and live rehearsals. The book also takes account of industry standards and guidelines to help steer the reader through the validation process, including the international standard ISO 22301 and the Business Continuity Institute's Good Practice Guidelines. In addition, it provides a number of case studies based on the author's considerable experience – some of them successful, others less so – to highlight common pitfalls and problems associated with the validation process.

The African Development Bank commissioned four case studies on Debt Relief Initiatives, Development Assistance and Service Delivery in Ghana, Malawi, Senegal, and Uganda from the last quarter of 2006 to mid 2007. The objective of the study was to appraise the extent to which debt relief resources are being used to improve social service delivery. There is strong agreement from all four case studies that debt relief created flexibility in governments spending by playing the role of flexible and predictable budget support. In this context, governments

acquired more degrees of freedom to allocate debt relief resources in line with their own objectives. In all four countries debt relief resources were more easily transformed into MDG-related spending than tied aid. The case studies had a consensus in identifying the accountability of public institutions to civil society, through community monitoring or execution of expenditures, as the most effective means of enhancing spending effectiveness. This formed the basis for the success observed in program implementation. From the findings of the case studies it is clear that debt relief can lead to enhanced service delivery provided certain conditions prevail. These conditions can be influenced by donors as well as the willingness of beneficiary governments to undertake reforms. The general observation across the case studies is that debt relief has a major positive impact on service delivery, and progress towards the MDGs, when beneficiaries: (i) have high capacity in MDG spending, (ii) are highly accountable, and (iii) receive stable and high-quality aid.
