Age Period Cohort Analysis New Age Period Cohort Analysis New This book is based on a decade of the authors' collaborative work in age-period-cohort (APC) analysis. Within a single, consistent HAPC-GLMM statistical modeling framework, the authors synthesize APC models and methods for three research designs: age-by-time period tables of population rates or proportions, repeated cross-section sample surveys, and accelerated longitudinal panel studies. Age-period-cohort analysis is an essential epidemiologic tool for analyzing trends over time in health outcomes. Age effects describe the common developmental processes that are associated with particular ages or stages in the life course and can explain trends in health outcomes if the age distribution of the population shifts over time. **Age-Period-Cohort Modeling | SpringerLink** Age-period-cohort analysis: new models, methods, and empirical applications.
