**Lost to You** The Economist

A timely one-stop pioneering book presenting all four major power management integrated circuits Existing analog IC books usually focus on amplifier and comparator designs, with some extend to switched capacitor filter designs and analog-to-digital and digital-to-analog converters design. There is no book yet on power management integrated circuits. Ki's book fills the void. This self-contained book discusses all fundamental concepts in switching converters, low dropout regulators, charge pumps and voltage references systematically, and in the context of analog integrated circuit design. Furthermore, concepts are discussed in both qualitative and quantitative aspects. Qualitative understanding is important in getting the essential operation of a circuit, but quantitative analysis supplies the solid foundation on which qualitative discussion is based. First book covering all four major power management circuits All concepts discussed in both qualitative and quantitative aspects Written as a self-contained text - well-organized and systematic Authored by a pioneering scientist in the field Supplementary instructional materials available for lecturers MATLAB simulation code for readers to download and practice on their own

"You damn bitch of an anarchist, I wish I could get at you. I would tear your heart out and feed it to my dog." This was one of the less obscene messages received by Emma Goldman (1869-1940), while in jail on suspicion of complicity in the assassination of McKinley. The most notorious woman of her day, she was bitterly hated by millions and equally revered by millions. The strong feelings she aroused are understandable. She was an alien, a practicing anarchist, a labor agitator, a pacifist in World War 1, an advocate of political violence, a feminist, a proponent of free love and birth control, a communist, a street-fighter for justice - all of which she did with strong intellect and boundless passion. Today, of course, many of the issues that she fought over are just as vital as they were then. Her autobiography, written with vigor, ranks among the finest in the English language.

As seen in the hit documentary Three Identical Strangers • "[A] poignant memoir of twin sisters who were split up as infants, became part of a secret scientific study, then found each other as adults."—Reader's Digest (Editors' Choice) WINNER OF A BOOKS FOR A BETTER LIFE AWARD Elyse Schein had always known she was adopted, but it wasn't until her mid-thirties while living in Paris that she searched for her biological mother. What she found instead was shocking: She had an identical twin sister. What's more, after being separated as infants, she and her sister had been, for

a time, part of a secret study on separated twins. Paula Bernstein, a married writer and mother living in New York, also knew she was adopted, but had no inclination to find her birth mother. When she answered a call from her adoption agency one spring afternoon, Paula's life suddenly divided into two starkly different periods: the time before and the time after she learned the truth. As they reunite, taking their tentative first steps from strangers to sisters, Paula and Elyse are left with haunting questions surrounding their origins and their separation. And when they investigate their birth mother's past, the sisters move closer toward solving the puzzle of their lives. Praise for *Identical Strangers* "Remarkable . . . powerful . . . [an] extraordinary experience . . . The reader is left to marvel at the reworking of individual identities required by one discovery and then another."—Boston Sunday Globe "Absorbing."—Wired "[A] fascinating memoir . . . Weaving studies about twin science into their personal reflections . . . Schein and Bernstein provide an intelligent exploration of how identity intersects with bloodlines. A must-read for anyone interested in what it means to be a family."—Bust "Identical Strangers has all the heart-stopping drama you'd expect. But it has so much more—the authors' emotional honesty and clear-eyed insights turn this unique story into a universal one. As you accompany the twins on their search for the truth of their birth, you witness another kind of birth—the germination and flowering of sisterly love."—Deborah Tannen, #1 New York Times bestselling author of *You Just Don't Understand* "A transfixing memoir."—Publishers Weekly

People come into our lives. Some stay, and many go. Some build us up, while most tear us down. They become our friends, our enemies, our lovers, our tormentors. Christian Davison came into mine, and I knew I'd never be the same. To Elizabeth Ayers, New York City had always been a dream. She's worked her entire young life to make it here. Groomed to one day take over his father's law firm, attending Columbia University was Christian Davison's only option. Neither wanted anything more until they sat across from each other at a caf table after being paired as study partners. Christian wants her, but Elizabeth knows better than to give into their intense attraction. Yet there is little she can do to stay away . . .

Globalisation, technology and an increasingly competitive business environment have encouraged huge changes in what is known as supply chain management, the art of sourcing components and delivering finished goods to the customer as cost effectively and efficiently as possible. Dell transformed the way people bought and were able to customise computers. Wal-Mart and Tesco have used their huge buying power and logistical skills to ensure the supply and stock management

of their stores is finely honed. Manufacturers now make sure that components are where they are needed on the production line just in time for when they are needed and no longer. Such finessing of the way the supply chain works boosts the corporate bottom line and can make the difference between being a market leader or an also ran. This guide explores all the different aspects of supply chain management and gives hundreds of real life examples of what firms have achieved in the field.

*Living My Life, Vol. 1: Autobiography* Berghahn Books

Introduction to Formal Languages, Automata Theory and Computation presents the theoretical concepts in a concise and clear manner, with an in-depth coverage of formal grammar and basic automata types. The book also examines the underlying theory and principles of computation and is highly suitable to the undergraduate courses in computer science and information technology. An overview of the recent trends in the field and applications are introduced at the appropriate places to stimulate the interest of active learners.

*A Memoir of Twins Separated and Reunited*

In 1900, Sheffield was the tenth largest city in the world. Cutlery "made in Sheffield" was used across the globe, and the city built armored plate for the navy in the run-up to the First World War. Today, however, Sheffield's derelict Victorian shop floors and industrial buildings are hidden behind new leisure developments and shopping centers. Based on an extended period of research in two local steel factories, this book combines a lively, descriptive account with a wide-ranging critique of post-industrial capitalism. Its central argument is that recent government attempts to engineer Britain's transition to a post-industrial and classless society have instead created volatile post-industrial spaces marked by informal labor, industrial sweatshops and levels of risk and deprivation that divide citizens along lines of gender, age, and class. The author discovers a link between production and reproduction, and demonstrates the centrality of kinship relations, child and female labor, and intra-household exchanges to the economic process of de-industrialization. Paradoxically, government policies have reinvigorated working-class militancy, spawned local industrial clusters and re-embedded the economy in the spatial and social structure of the neighborhood.
