Accounting for Selected Assets and Liabilities Christian Publishing House
 This book is aimed at manufacturing and planning managers who struggle to bring a greater degree of stability and more effective use of assets to their operations, not realizing the degree to which production scheduling affects those objectives. It has been reported that 75% of the problems on the manufacturing floor are caused by activities outside the plant floor. Poor production scheduling strategies and systems are often the biggest contributors to the 75%. The book explains in detail that no scheduling strategy, and especially no transition to a different and better scheduling strategy, will succeed without strong commitment and guidance from senior leadership. Leadership must understand their active role in the transition, that people will feel uncomfortable and even threatened by change, and that they will need to be measured by

different standards. Effective scheduling requires that following the schedule and production to plan is more important than trying to maximize each day's throughput. The book explains the advantages of a structured, regularly repeating schedule: how it can increase throughput, right-size inventory based on cycles and variabilities and therefore make it more usable, and improve customer delivery. It will explain the trade-offs between throughput, inventory, and delivery performance, how those trade-offs are actually decided in production scheduling, and how an appropriate scheduling strategy can make the trade-offs and their ramifications visible. It discusses several popular structured scheduling concepts, their similarities, and differences, to allow the readers to decide which might fit best in their environments. In addition, the authors discuss what makes an appropriate scheduling software system, and why a package designed for structured scheduling offers capabilities well beyond the Excel workbooks used by many companies, and how it offers much more design capability and ease of use than the finite scheduling modules in SAP or Oracle. Finally, the authors offer a proven roadmap for implementation, critical success factors necessary to achieve the full potential, and give examples

of operations that have done this well. In addition, a guide for leaders and managers post-implementation is provided to help them fully exploit the advantages of a structured, repeating scheduling strategy.

The gift of "LIFE." One per person. Non-transferable. Limited time span. We are through a container - the BODY offered this gift. This container - the Body comes equipped with a SECRET MIND that develops from conception, functions below the level of consciousness, and records experiences as memories. This secret mind, rather than our conscious mind, plays a crucial role in formulating our behaviors, thoughts, and emotions. The lack of awareness of this can lead to "unintentional damage" in our relationships with loved ones. At such times, the emotional pain we experience may surface in various coping mechanisms and feelings of "unbearable hunger, never enough, loneliness." It may leave a scab of ingrained anxiety and depression. This book fills that niche in the market through its stark simplicity in explaining and illustrating the secret mind with numerous case stories. Awareness of this and the multiple tools offered in the book can help us

experience genuine connectedness, security, and fulfillment in our intimate relationships. Physical, emotional, and mental wellness can flourish. The benefits are priceless. A satisfying "LIFE" indeed. Sudha Kudva works as a professional counselor specializing in Child, Adult, Couple, Family, and Trauma Therapy (using EMDR Therapy). With over 20,000 hours of experience, she also offers insightful workshops and talks. This is her second book. For more information, do visit www.secretmind.me We all know we have a conscious mind (also called the thinking, cognitive, or intellectual mind), and we can often retrieve memories stored here. How many of us are aware that we also have a secret mind that stores memories and operates below the level of consciousness? I call this the secret mind of the Body, where memories generated from conception are stored. (Psychologists call this implicit memory and implicit beliefs). These stored memories usually do not surface as "stories," as there is no conscious recall ability before 2-2.5 years. Instead, they are regularly activated as emotional experiences. "I discovered that my professional training, with its focus on understanding and insight, had largely ignored the relevance of the living, breathing Body, the foundation of ourselves." Bessel A. van der Kolk, Author of "The Body Keeps The Score. We may not be aware that much of our behaviors are dictated by the secret mind of the Body rather than our conscious mind. How does the secret mind of the Body do that? It does so from the information it receives when one Human Body interacts with another. Human Bodies communicate with each other in a language that is not words. Communication occurs when the nervous system of one Human Body subtly picks up information about the other Body and vice versa. This process happens at a speed that is faster than the spoken words we usually use to interact with each other, and it happens below the level of conscious awareness. The information gathered is fed to the secret mind of the Body, where meanings are attached to these interactions. Behaviors are an outcome or an adaptation of the secret mind's interpretation of this data. The Body's conscious mind has only a minor role to play in our behaviors. Are we then so pre-programmed? Many a time, in retrospect, we may be disgusted by our own behaviors. Are the latter arising from this pre-programming? Do we have so little control over our behaviors? How, then, can we, the conscious self, be responsible for our behaviors when so much is happening at the subconscious level? Fortunately for us, the human body communicates with us (conscious self) and gives us an inkling of the meaning the secret mind has attached to the incoming information. What we do after this is in our hands. So, we do have control over our behaviors. This can only happen if we (the conscious self) are aware of the language of communication of the Body to us. Only then can we take charge of our behaviors. We can now consciously modify or abort the pre-programmed behavior, which otherwise might be detrimental to us and our relationships. Otherwise, it can feel as if we are rudderless, and our behaviors, despite our best efforts, repeatedly let us down. This Book supports us in understanding the secret mind and the language of communication of the Body with us. More on how this book can support us is shared below. One of the primary functions of this secret mind is to create a blueprint from the 'emotional experiences' gathered during interactions with others, particularly its primary caregivers. Were these interactions emotionally safe, or were they tinged /seeped with danger? These 'emotional experiences' of various moments are meticulously stored as a blueprint on how to navigate life in this world. Each moment is checked thoroughly - are cues suggestive of approachability (safety) or unapproachability (threat)? And behaviors are adjusted to the answers derived. This blueprint saved in the secret mind, and the behaviors that needed to manifest served an important function in childhood; however, that pattern of behaviors may no longer be relevant in adulthood. Ironically and sadly, that familiar pattern is still very functional decades later. Based on that past programming of the familiar, false alarms ring, and the behaviors that now arise are often detrimental to personal growth and relationships in our adult life. Some of these pre-programmed behaviors play a major role in marital and family discords.

Whether a library catalogs its own materials or not, librarians still need to have some understanding of RDA. Designed to be used by academic, public, and school librarians, this is the perfect introduction. RDA (Resource Description and Access) was released in March 2013 and catalogers are busy trying to understand and implement the new protocols. This book will help. Unlike the RDA training materials prepared for seasoned catalogers by the Library of Congress and others, the The RDA Workbook: Learning the Basics of Resource Description and Access uses tried-and-true methods to make RDA clear even to those who have little or no previous cataloging knowledge. The workbook can be used by an individual or to teach others in staff training sessions, presentations, or LIS courses. It discusses the theoretical framework of the cataloging code; details the steps necessary to create a bibliographic for books, videos, and other formats; and shows librarians how to read and interrupt authority records for persons, families, corporate bodies, works, and expressions. Finally, the workbook suggests strategies for implementing RDA.

Learn hundreds of obscure yet fascinating facts about London, brought to life with fun and quirky illustrations Did you know that, with more than 17,000 skeletons in its collection, the Museum of London has over three times the number of dead bodies than a full capacity audience at the Royal Albert Hall? That "Farting Lane" (Carting Lane, off the Strand) was so christened because it was illuminated at night by a street lamp run on the methane gas produced by guests staying at the nearby Savoy Hotel? That Burlington Arcade was commissioned by Lord George Cavendish to stop dead cats from being thrown over his garden wall? And that Woodford is the only London Underground Station not to have at least one letter in common with the word elephantiasis? The Completely Useless Guide to London is, as the title suggests, an unnecessary, and yet informative and compulsively entertaining guide to this ancient and endlessly fascinating city.
