BRIGHT BALLARD

The Great Convergence World Bank Publications

This book offers an innovative view of everyday reality. It clarifies how the spatial dimension of reality, as well as our personal and inter-personal perception and interaction with reality, aggravates human separateness at the expense of human connectedness. It shows how many urgent societal challenges are affected by an imbalance between spatial and the non-spatial aspects, and offers an analysis of the impoverishment of society, both in spatial terms (spatialisation) and in informational terms (digitalisation). Drawing on insights from quantum physics and depth psychology, it proposes an unorthodox view of the potential of humans, and of reality in itself, that was lost in this impoverishment. "I found this book hugely interesting, highly original and very well written. I haven't come across these ideas presented in quite this way, and so the book could be considered a groundbreaking contribution" Dr Stephan Harding, Resident Ecologist Schumacher College, Author of 'Animate Earth'. "It rarely happens that we are invited by a scholarly text to look at reality in a basically different way than the one we are used to, at least in a way that is seductive and compelling at the same time. But this is precisely what the text of Pieter Brabers has done with me." Dr John Rijsman, Emeritus Professor of Social Psychology, Tilburg University.

Songs of Ourselves Cambridge University Press

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Fostering freedom online: the role of Internet intermediaries Lulu.com

Private companies exert considerable control over the flow of information on the internet. Whether users are finding information with a search engine, communicating on a social networking site or accessing the internet through an ISP, access to participation can be blocked, channelled, edited or personalised. Such gatekeepers are powerful forces in facilitating or hindering freedom of expression online. This is problematic for a human rights system which has historically treated human rights as a government responsibility, and this is compounded by the largely light-touch regulatory approach to the internet in the West. *Regulating Speech in Cyberspace* explores how these gatekeepers operate at the intersection of three fields of study: regulation (more broadly, law), corporate social responsibility and human rights. It proposes an alternative corporate governance model for speech regulation, one that acts as a template for the increasingly common use of non-state-based models of governance for human rights.

Conflict and Transformation Cambridge University Press

"Bruce Schneier's amazing book is the best overview of privacy and security ever written."—Clay Shirky "Bruce Schneier's amazing book is the best overview of privacy and security ever written."—Clay Shirky Your cell phone provider tracks your location and knows who's with you. Your online and in-store purchasing patterns are recorded, and reveal if you're unemployed, sick, or pregnant. Your e-mails and texts expose your intimate and casual friends. Google knows what you're thinking because it saves your private searches. Facebook can determine your sexual orientation without you ever mentioning it. The powers that surveil us do more than simply store this information. Corporations use surveillance to manipulate not only the news articles and advertisements we each see, but also the prices we're offered. Governments use surveillance to discriminate, censor, chill free speech, and put people in danger worldwide. And both sides share this information with each other or, even worse, lose it to cybercriminals in huge data breaches. Much of this is voluntary: we cooperate with corporate surveillance because it promises us convenience, and we submit to government surveillance because it promises us protection. The result is a mass surveillance society of our own making. But have we given up more than we've gained? In *Data and Goliath*, security expert Bruce Schneier offers another path, one that values both security and privacy. He brings his bestseller up-to-date with a new preface covering the latest developments, and then shows us exactly what we can do to reform government surveillance programs, shake up surveillance-based business models, and protect our individual privacy. You'll never look at your phone, your computer, your credit cards, or even your car in the same way again. UNESCO Publishing

This book examines the role of transnational advocacy networks in enabling effective participation for individual citizens in the deliberative processes of global governance. Contextualized around the international conference setting of the United Nations-sponsored World Summit on the Information Society (WSIS) in 2003 and 2005, the book sees epistemic communities and information and communication technologies (ICTs) as critical to the effectiveness of this important organizational form. Historically, governments have dominated the official "conference diplomacy" surrounding

these World Summits. However, reflecting the UN General Assembly resolution authorizing WSIS, transnational civil society and private sector organizations were invited to participate as official partners in a multistakeholder dialogue at the summit alongside the more traditional governments and international organizations. This book asks: are transnational advocacy networks active in the global information society influential partners in these global governance processes, or merely symbolic tokens—or pawns? Cogburn explores the factors that enabled some networks—such as the Internet Governance Caucus—to persist and thrive, while others failed, and sees linkages with epistemic communities—such as the Global Internet Governance Academic Network—and ICTs as critical to network effectiveness.

Erosion of Reality by Spatialisation and Digitalisation Springer

The opportunities afforded by the Internet greatly overshadow the challenges. While not forgetting this, we can nevertheless still address some of the problems that arise. Hate speech online is one such problem. But what exactly is hate speech online, and how can we deal with it effectively? As with freedom of expression, on- or offline, UNESCO defends the position that the free flow of information should always be the norm. Counter-speech is generally preferable to suppression of speech. And any response that limits speech needs to be very carefully weighed to ensure that this remains wholly exceptional, and that legitimate robust debate is not curtailed.

The Greenhouse Gas Protocol Currency

Big data, surveillance, crisis management. Three largely different and richly researched fields, however, the interplay amongst these three domains is rarely addressed. In this enlightening title, the link between these three fields is explored in a consequential order through a variety of contributions and series of unique and international case studies. Indeed, whilst considering crisis management as an "umbrella term" that covers a number of crises and ways of managing them, the reader will also explore the collection of "big data" by governmental crisis organisations. However, this volume also addresses the unintended consequences of using such data. In particular, through the lens of surveillance, one will also investigate how the use and abuse of big data can easily lead to monitoring and controlling the behaviour of people affected by crises. Thus, the reader will ultimately join the authors in their debate of how big data in crisis management needs to be examined as a political process involving questions of power and transparency. An enlightening and highly topical volume, *Big Data, Surveillance and Crisis Management* will appeal to postgraduate students and postdoctoral researchers interested in fields including Sociology and Surveillance Studies, Disaster and Crisis Management, Media Studies, Governmentality, Organisation Theory and Information Society Studies.

Research Handbook on Privacy and Data Protection Law Litres

On 7 January 1839, during a session of the Academy of Sciences in Paris, the physicist and politician Francois Arago presented a new process to reproduce images, using mechanical and chemical means without any manual intervention in a dark room. This procedure became known as the daguerreotype and marked the official birth of photography. Louis Daguerre's invention, in which a single image is exposed directly onto a mirror-polished copper plate coated with silver halide

particles, definitively altered the way we look at the world and the representations we make of it, both artistic and scientific. This collection of French daguerreotypes drawn from the Musee d'Orsay emphasizes the particular aesthetic of these unique photographs, which are at once positive and negative. The development and rapid, but ephemeral, spread of Daguerre's invention in France are illustrated by the variety of subjects and the depth and quality of the collection the Museum has built up over the last few years.

Application of Big Data for National Security W. W. Norton & Company

High-stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations, especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment. Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book's primary audience consists of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational assessment, to governmental and education agencies responsible for student selection, and to professionals at development organizations. "This extremely well-written and comprehensive book offers a timely review of the diversity of public examination practices worldwide; of the tensions between examinations and learning; and of the technical expertise involved in the creation of valid, reliable, and fair assessments. It reminds us that as "the diploma disease" takes hold with an ever-greater intensity at every stage of education worldwide, and the commercial business of testing flourishes, those concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog." Angela W. Little, Professor Emerita, Institute of Education, University College London "This book is very well structured and written and draws on the authors' remarkable global knowledge across countries and histories. It will be a great asset both to administrators responsible for examinations and to academics and other professionals who seek to understand the nature and impact of examinations of different types and in different settings." Mark Bray, UNESCO Chair Professor of Comparative Education, University of Hong Kong; and former Director, UNESCO International Institute for Educational Planning "I am sure that *Public Examinations Examined*, which thoroughly analyzes the practice of public examinations in different countries and makes profound and well-grounded conclusions, will arouse very great interest and will serve to further improve public examinations." Victor Bolotov, Distinguished Professor, Higher School of Economics, National Research University, Moscow; member, Russian Academy of Education; and former Deputy Minister of Education, Russian Federation

World Report 2018 Cambridge University Press

Songs of Ourselves: the University of Cambridge International Examinations Anthology of Poetry in English contains work by more than 100 poets from all parts of the English speaking world.

Ethics for the Information Age Seven Stories Press

Provides a roadmap for understanding the relationship between technology and human rights law and practice. This title is also available as Open Access.

Explains how existing and proposed law seek to tackle challenges posed by new and emerging technologies in war and peace.

Data and Goliath: The Hidden Battles to Collect Your Data and Control Your World Springer

The human rights records of more than ninety countries and territories are put into perspective in Human Rights Watch's signature yearly report. Reflecting extensive investigative work undertaken in 2016 by Human Rights Watch staff, in close partnership with domestic human rights activists, the annual World Report is an invaluable resource for journalists, diplomats, and citizens, and is a must-read for anyone interested in the fight to protect human rights in every corner of the globe.

Cyber Operations and International Law Globalization Development and Social Justice

This volume investigates secret diplomacy with the aim of understanding its role in shaping foreign policy. Recent events, including covert intelligence gathering operations, accusations of spying, and the leaking of sensitive government documents, have demonstrated that secrecy endures as a crucial, yet overlooked, aspect of international diplomacy. The book brings together different research programmes and views on secret diplomacy and integrates them into a coherent analytical framework, thereby filling an important gap in the literature. The aim is to stimulate, generate and direct the further development of theoretical understandings of secret diplomacy by highlighting 'gaps' in existing bodies of knowledge. To this end, the volume is structured around three distinct themes: concepts, contexts and cases. The first section elaborates on the different meanings and manifestations of the concept; the second part examines basic contexts that underpin the practice of secret diplomacy; while the third section presents a series of empirical cases of particular relevance for contemporary diplomatic practice. While the fundamental conditions diplomacy seeks to overcome – alienation, estrangement and separation – are imbued with distrust and secrecy, this volume highlights that, if anything, secret diplomacy is a vital, if misunderstood and unfairly criticised, aspect of diplomacy. This book will be of much interest to students of diplomacy, intelligence studies, foreign policy and IR in general.

Globalization Development and Social Justice 5Continents

This book brings together papers and articles presented at the conference "Journalism in a World of Terrorism", held at the Linnaeus University in Kalmar, Sweden, in 2017, which gathered together media researchers and journalists from around the world to discuss this contemporary global

problem. The contributions consider what happens in the wake of a terrorist attack, how the people affected communicate, and how terrorists use social media. The book will appeal both to academic readers and to anyone interested in what happens in the wake of a terrorist attack.

Making Open Development Inclusive Foundation Books

Are there existing alternatives to corporate globalization? What are the prospects for and commonalities between communities and movements such as Occupy, the World Social Forum and alternative economies? Globalization Development and Social Justice advances the proposition that another globalization is not only possible, but already exists. It demonstrates that there are multiple pathways towards development with social justice and argues that enabling propositional agency, rather than oppositional agency such as resistance, is a more effective alternative to neoliberal globalization. El Khoury develops a theory of infraglobalization that emphasizes creative constitution, not just contestation, of global and local processes. The book features case studies and examples of diverse economic practice and innovative emergent political forms from the Global South and North. These case studies are located in the informal social economy and community development, as well as everyday practices, from prefigurative politics to community cooperatives and participatory planning. This book makes an important contribution to debates about the prospects for, and practices of, a transformative grassroots globalization, and to critical debates about globalization and development strategies. It will be of interest to students and scholars of international relations, globalization, social movement studies, political and economic geography, sociology, anthropology and development studies.

Transnational Advocacy Networks in the Information Society OECD Publishing

In this important compendium, one of the leading scholars of EU law and its legal framework, reflects on his previous writings in the context of current challenges the European project is facing. More than a simple restatement, it offers an important theoretical comment at this defining time for EU law. The author offers a welcome counterbalance to what some perceive to be a surfeit of optimism when assessing the EU and its development. In so doing, Professor Joerges identifies three flaws in the current European ideology. Firstly, he points to the intellectual weakness of the "integration through law" ideology. Secondly, the book sets out the systematic neglect of "the economic" and its political dynamics. Finally, it addresses the complacency with respect to Europe's darker legacies. This is an important critical (and candid) assessment of Europe at its half century.

Cyber-Physical Security LIT Verlag Münster

An exploration of the current state of global trade law in the era of Big Data and AI. This title is also available as Open Access on Cambridge Core.

Introduction to Information Retrieval Cambridge University Press

The definitive and essential source of reference for all laboratories involved in the analysis of human semen.
