The Oosterschelde estuary is one of the estuaries in the Netherlands which remained after the Delta scheme was completed in 1986. In the seventies the Oosterschelde became a national symbol of the change in political thinking and decision making about the values of our natural environment. As a result of political decision a storm surge barrier was built in the mouth of the estuary, as a compromise between safety for the human population and nature conservation. Owing to the broad interest in the meaning of the Oosterschelde estuary for Dutch and international societies, it became one of the most intensively studied coastal ecosystems in Western Europe. In an interdisciplinary approach of several state agencies and universities, a broad spectrum of physical, chemical and biological research has been carried out during the period of 1980--1989, dedicated to the structure and functioning of the saline ecosystem. The undisturbed estuary was studied during the period between 1980--1984. Large mathematical models had been constructed before 1986, to simulate future changes in the ecosystem. Further studies after the completion of the storm surge barrier (1986--1989) have been used for verification of the model. The integrated and summarized knowledge of the Oosterschelde ecosystem is used by water managers and nature and fisheries conservationists. A case study for professional civil engineers, ecologists, marine biologists, water managers, decision makers, university students and anyone interested in physical, chemical and biological estuarine and coastal sciences.

 As one of America's "public intellectuals," John Dewey was engaged in a lifelong struggle to understand the human mind and the nature of human inquiry. According to Thomas C. Dalton, the successful pursuit of this mission demanded that Dewey become more than just a philosopher; it compelled him to become

thoroughly familiar with the theories and methods of physics, psychology, and neurosciences, as well as become engaged in educational and social reform. Tapping archival sources and Dewey's extensive correspondence, Dalton reveals that Dewey had close personal and intellectual ties to scientists and scholars who helped form the mature expression of his thought. Dewey's relationships with F. M. Alexander, Henri Matisse, Niels Bohr, Myrtle McGraw, and Lawrence K. Frank, among others, show how Dewey dispersed pragmatism throughout American thought and culture.

It takes a graveyard to raise a child. Nobody Owens, known as Bod, is a normal boy. He would be completely normal if he didn't live in a graveyard, being raised by ghosts, with a guardian who belongs to neither the world of the living nor the dead. There are adventures in the graveyard for a boy—an ancient Indigo Man, a gateway to the abandoned city of ghouls, the strange and terrible Sleer. But if Bod leaves the graveyard, he will be in danger from the man Jack—who has already killed Bod's family.

Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific

research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

A festschrift prepared for the occasion of musicologist Lewis Lockwood's 65th birthday. The volume's 27 contributions, written by Lockwood's students and American colleagues, cover topics including tonal color in Dufay; notes on a Josquin motet and its sources; the Florentine madrigal, 1540-60; and a model for a changing aesthetic in the chansons of Loyset Compere. An appendix lists Lockwood's publications on Renaissance music. *Making Supply Chain Management Work* John Wiley & Sons Incorporated

How does one go about writing the history of musical composition in the late twentieth century when, on the one hand, so much of it seems impossibly fractured and disassociated, and, on the other, there has been so little certainty about what the notion of 'music history' might entail under the critiques of post-modernism? One of the most productive ways forward is to pursue case studies involving single composers whose music reflects several aspects of recent activity. This enables the discussion of broad issues in a relatively focussed way whilst avoiding the pitfalls of traditional narrative histories and the centrifugal tendencies of the relativistic approach that some have called for. The music of the English-born (1943) and Australia-domiciled composer Roger Smalley is ideal material for such a study, because of his involvement with and response to an unusually large number of the myriad concerns and practices of post-1950s composition, including post-serial constructivism; parody; electro-acoustic composition and the electronic modification of conventionally-produced sound; Moment Form; aleatorism; minimalism; the use of non-Western resources (Aboriginal and South-East Asian sonorities); neo-Romanticism; and, arguably, the 'new classicism', as well as a brief flirtation with rock music in the late '60s. Employing an interview with the composer as a kind of *cantus firmus*, the book - the first extended single-author study of Smalley's music to be published - incorporates critical commentary on the composer's major works in a chronological narrative that engages with broad issues of central relevance to Smalley's generation, such as the process of learning the craft of composition in the early '60s; the motivation behind the adoption of certain technical and aesthetic positions; the effects on technical and aesthetic orientation of both the changing relationships between composer, performer, and audience and

technological change; and the distinction between **Management Information Systems** University of Illinois Press #1 NEW YORK TIMES BESTSELLER • ONE OF TIME MAGAZINE'S 100 BEST YA BOOKS OF ALL TIME The extraordinary, beloved novel about the ability of books to feed the soul even in the darkest of times. California Management Review Jones & Bartlett Learning Penetrating case studies from around the globe. Arthur Andersen's Global Lessons in Activity-Based Management uses a wealth of case studies from around the world to illustrate how ABM is a global tool that works. Drawn from the experiences of fourteen different organizations in seven different countries, these studies illustrate how companies understand the work performed in their organizations and how this understanding can make any company more profitable. Each case study describes the conversion strategy selected by the implementation team, recounts the successes and challenges of the strategy, and explains how problems were avoided or overcome. These case studies, written by actual members of the implementation teams involved, reveal how ABM was used to: * Identify the cost of services and determine customer profitability in a Brazilian bank * Improve profitability through better decision making at a Canadian service-distribution firm * Turn a Portuguese telephone monopoly into a market competitor * Help a French

manufacturing firm boost its profitability * Uncover new opportunities for improvement in a U.S. utility * And much more Loaded with important insights, practical tips, and a large portion of hard-won wisdom, this book is a must have for anyone who wants to use activity-based management to build a stronger, more profitable, more effective organization.

You have more information at hand about your business environment than ever before. But are you using it to "out-think" your rivals? If not, you may be missing out on a potent competitive tool. In *Competing on Analytics: The New Science of Winning*, Thomas H. Davenport and Jeanne G. Harris argue that the frontier for using data to make decisions has shifted dramatically. Certain high-performing enterprises are now building their competitive strategies around data-driven insights that in turn generate impressive business results. Their secret weapon? Analytics: sophisticated quantitative and statistical analysis and predictive modeling. Exemplars of analytics are using new tools to identify their most profitable customers and offer them the right price, to accelerate product innovation, to optimize supply chains, and to identify the true drivers of financial performance. A wealth of examples—from organizations as diverse as Amazon, Barclay's, Capital One, Harrah's, Procter & Gamble, Wachovia, and the Boston Red Sox—illuminate how to leverage the power of analytics.
