HAPTER 5 Cell Growth and Division - Weebly The Cell Cycle The cell cycle is the series of events in the growth and division of a cell. In the prokaryotic cell cycle, the cell grows, duplicates its DNA, and divides by pinching in the cell membrane. 10.1 Cell Growth, Division, and Reproduction Section 10-2 Cell Division (pages 244-249) This section describes the main events of the cell cycle. It also

explains what happens during mitosis, when cell division occurs. Chromosomes (page 244) 1. Is the following sentence true or false? Chromosomes are not visible in most cells except during cell division. 2. Section 10-2 Cell Division, Growth, Division, and Reproduction: 1. What are the reasons why cells divide? How does division address these issues? 2. Describe what is meant by
