On 25 December 2003,
Union des Transport A
riens de Guin e Flight GIH
141, a Boeing 727-223, on
a flight from Conakry
(Guinea) to Kufra (Libya),
Beirut (Lebanon) and
Dubai (United Arab
Emirates) stopped over at
Cotonou, Republic of
Benin. During takeoff the

overloaded airplane, was
not able to climb properly
and struck an airport
building on the extended
runway centerline, and
crashed onto the beach
and ended up in the
ocean, killing 151 of the
163 people on board. The
cause of the accident was
the difficulty for the flight
crew to rotate with an
overloaded airplane with
an unknown center of
gravity. This in
combination with the facts
that the operator of the
airline lacked any
competence regarding
organization and
regulatory
documentation, which
made it impossible to
correctly load and check
the loading of the
airplane, and the
inadequacy of the
supervision exercised by
the Guinean civil aviation
authorities in the context
of safety oversight.

Enhancing Procurement
Practices is organised
around four main points: -
overview and analysis of
procurement principles, -
practical approach to

drafting of solicitation and
contract documents, -
conduct of procurement
procedures, -overview of
the e-procurement arena.
Although the addressed
procurement methods can
be used on a wide scale,
this book concentrates
primarily on such cases
when the subject of
procurement is complex,
or the solicited goods and
services are relatively
simple but the intended
long-term relationship
calls for a fairly conscious
source selection. Project
procurement, the most
complicated form of
buying civil engineering
work, goods, and services,
is thoroughly addressed.
Beyond the structured
overview and comparative
analysis of terminology
and principles, the book
describes such new
concepts as single-source
preference for
simultaneous
procurements, dual-term
frame contract for parallel
suppliers, and the use of
semi-consolidated
contract documents.
Effective utilisation of
theories boils down -
among others - to a
consistent set of

procurement-related terms, proven methodology for drafting comprehensive solicitation documents and contracts, and practical details of communication with offerors.

Flight Operations in Oceanic Airspace

Kluwer Law International B.V.

This book analyses the models for major risks related to flight safety in the aviation sector and presents risk estimation methods through examples of several known aviation enterprises. The book provides a comprehensive content for professionals engaged in the development of flight safety regulatory framework as well as in the design and operation of ground-based or on-board flight support radio electronic systems. The book is also useful for senior students and postgraduates in aviation specialties, especially those related to air traffic management.

Federal Role in Aviation

Lulu.com

This volume discusses various institutional, legal and operational aspects related to the provision of air navigation services, taking particular

consideration of the current implementation of a new generation of communications, navigation and surveillance systems for future air traffic management (CNS/ATM). The primary intent is to critically review the current mechanisms for international co-operation in this field. Particularly in Europe, many efforts have been undertaken to enhance air traffic management by harmonization and integration of national developments but many parties claim that these are still insufficient and the processes are still dominated by the individual States. Following a short description of the historical developments, the global framework of cooperation established through ICAO is described, supplemented with a description of some multilateral organizations active in the field of air traffic management on a regional basis. The basic technological and operational changes envisaged with the implementation of the Future Air Navigation Systems (FANS) are described and, based on these, related institutional and legal aspects are

discussed. Particular emphasis is given to developments in Europe, where during the last four decades several initiatives for enhancing the cooperation of States could not overcome the fragmentation of the airspace. The decisions of February 1997 of the ECAC Ministers of Transport on an Institutional Strategy are reflected. One chapter is devoted to questions of liability in air traffic management which are of particular importance with regard to international cooperation.

Kluwer Law International B.V.

In this third edition the chapters have been enhanced to reflect changes in technology and the way the air transport industry runs. Key topics that are newly addressed include low cost airline operations, security issues and EASA regulations on airports. A new chapter covering extended details about wildlife control has been added to the volume.

This book offers an extraordinary wealth of information, from the ground up, of the law governing and regulating air transport today, with a strong emphasis on international aviation. A team of distinguished authors in the field of aviation law provide a cogent synthesis from which sound legal opinions and strategies of legal action may be confidently built. Among the many topics here in depth are the following: definition and classification of airspace;

distinction between civil and state aircraft; air navigation and air traffic control services; airport charges and overflight charges; structure of ICAO; standard-setting functions and audit functions of ICAO; functions of the International Air Transport Association (IATA); policy and effects of deregulation and liberalization of air transport policy; the International Registry for Aircraft Equipment; air carrier liability regimes and claims procedure; measures to combat aviation terrorism, air piracy and sabotage; and

the Open Skies Agreements. This publication cites significant legislation and court rulings, including from the United States and the European Union, where far-reaching measures on market access, competition and passenger rights have set trends for other regions of the world. The special case of Latin America has a chapter to itself. At a time when commercial aircraft have been used as lethal weapons for the first time, aviation law finds itself in the front line of responsibility for maintaining global aviation security.
