Maritime Informatics CRC Press
Uniformity of Transport Law through
International Regimes addresses the
problem of uniformity of transport law
and the potential solutions at
international and EU levels. It concerns
transport conventions and other
instruments dealing mainly with carriage
of goods by sea and multimodal
transport as well as examining the

Rotterdam Rules as one of the solutions
towards uniformity in carriage of goods
law. The discussion on international
uniformity in transport law is
complemented by an examination of
regional harmonization in the context of
EU law-making and jurisprudence in the
field of international transport. The
comparison between international and
regional regimes reveals the
complexities in application and
interpretation of the certain transport
conventions which is detrimental to
achieving uniformity.

Law of International Business in Australasia Springer

Shipbroking and Chartering Practice provides a sound knowledge of the law and economics of international shipbroking and chartering in a practical way that enables the principles described to be applied in everyday situations. The seventh edition has been thoroughly revised to take account of chartering practices, cases and standard forms that have surfaced since the last edition, providing an excellent commentary.

This is the enhanced, augmented and updated 2nd edition 2021. The Shipbroker's working knowledge is a book for employees involved in the shipping industry and particularly those

dealing or about to deal with the chartering of dry cargo ships. It provides personal knowledge that the author gained during the performance of his duties in the various departments of shipping agencies.

Commercial Shipping Handbook
Springer

This first book on Maritime Informatics describes the potential for Maritime Informatics to enhance the shipping industry. It examines how decision making in the industry can be improved by digital technology, and introduces the technology required to make Maritime Informatics a distinct and valuable discipline. Based on participating in EU funded research over the last six years to improve the shipping industry, the editors stipulate that there is a need for

the new discipline of Maritime Informatics, which studies the application of information systems to increasing the efficiency, safety, and ecological sustainability of the world's shipping industry. This book examines competition and collaboration between shipping companies, and also companies who serve shipping needs, such as ports and terminals. Practical examples from leading experts give the reader real world examples for better understanding.

Admiralty and Maritime Law Routledge
Updated and expanded to include new equipment and also new documentation relating to bills of lading and charterparties, this new edition of Peter Brodie's dictionary provides a reference tool for all of those who use or operate cargo ships, both tramp and liner, or who are concerned with their use. This includes ship operators, forwarding agents,

chartering agents and port agents as well as importers and exporters. The principal areas covered are: voyage and time charters documentation, including bills of lading ship types and their gear; ports, their equipment and facilities cargoes and their packing geographical and weather features. With few exceptions, standard charter-parties and bills of lading are in English, as are a great number of textbooks. Consequently, French speaking students following the various college and university courses in Shipping and Shipbroking are expected to find this dictionary of great practical use.

Principles and Practice Kogan Page Publishers

This book focuses on the management of

ship operations, an activity that requires integrative knowledge and technical expertise that spans various disciplines. As such, ship operations personnel are expected to be well-versed with aspects of management, economics, engineering, technology and law. Further, ship operations management requires the ability to identify and neutralize threats and to manage risks and make decisions that will optimize costs and contribute to performance improvements. Despite the fundamental nature of ship operations management, no book has ever attempted to reconcile and compile a comprehensive body of knowledge, while pursuing a coherent, structured and systematic approach. This edited volume addresses that fundamental gap in the extant literature,

and brings together a wealth of knowledge from experts in their respective fields. Concretely, it explores issues of organization, technical management, crewing and behavioral issues, chartering and post fixture, risk management, finance, legal aspects of international conventions and regulations, attainment of safety, security and marine insurance, as well as ocean governance and sustainability. As such, the book offers a vital reference guide for maritime companies and organizations, while also serving as a teaching supplement in academic and professional maritime programmes.

JOHN S. MILLIS In 1966 the Citizens Commission on Graduate Medical Education observed that the explosive growth in biomedical science and the consequent increase in medical skill and technology of the twentieth century had made it possible for physicians to respond to the episodes of illness of

patients with an ever-increasing effectiveness, but that the increase in knowledge and technology had forced most physicians to concentrate upon a disease entity, an organ or organ system, or a particular mode of diagnosis or therapy. As a result there had been a growing lack of continuing and comprehensive patient care. The Commission expressed the opinion that "Now, in order to bring medicine's enhanced diagnostic and therapeutic powers fully to the benefit of society, it is necessary to have many physicians who can put medicine together again. " The Commission proceeded to recommend the education and training of substantial numbers of Primary Physicians who would, by assuming primary responsibility for the patient's welfare in sickness

and in health, provide continuing and comprehensive health care to the citizens of the United States. In 1978 it is clear that the recommendation has been accepted by the public, the medical profession, and medical education.

There has been a vigorous response in the development of family medicine and in the fields of internal medicine, pediatrics, and obstetrics. One is particularly impressed by the wide acceptance on the part of medical students of the concept of the primary physician. Dr. John S.

The Rotterdam Rules and International Trade Law Butterworth-Heinemann

This book provides practical solutions for addressing energy efficiency as a clause term within a charter party contract. For this, upon a reflection of the regulatory craft, it analyzes key concepts of case law, and discusses them together with

commercial and economic principles. In this way, the book aims at offering a comprehensive, interdisciplinary view of the chartering process, together with a new approach for safeguarding energy efficiency investments. A special emphasis is given to the maritime industry. Here, the newly developed framework, based on game theory, has been successfully applied to demonstrate the importance of including a clause term in contract negotiation to achieve protection against both an uncertain market and an even more challenging shipping environment. The book not only fills a gap in the literature, covering a topic that has been largely neglected to date, yet it offers researchers and practitioners extensive information to change the chartering

process radically.
