This book presents the ontological and logical foundation of a new form of thinking, the beginning of an absolute phenomenology. It does so in the context of the history of thought in Europe and America. It explores the ramifications of a categorically new logic. Thinkers dealt with include Plato, Galileo, Hegel, Kierkegaard, Marx, Nietzsche, Husserl, Heidegger, Peirce, James, Dewey, Derrida, McDermott, and Altizer.

The Unveiling of the National Icons Harper Collins

Written in straightforward non-technical language, with numerous diagrams and photographs, this book takes a look at 'the invisible art' of the great builders: how they founded their constructions in the earth and strove to understand and combat the natural forces, such as earth pressures, water, landslides, earthquakes, and almost imperceptible geological changes, with which they had to contend. A great many examples, including the ziggurats of Mesopotamia, the pyramids of Egypt, the Roman roads, the Tower of Pisa, the Eddystone Lighthouse, the Panama Canal, the

Thames Tunnel and the Eiffel Tower, are used to illustrate various aspects of this long battle. Man has gradually mastered physical constraints and undertaken increasingly ambitious projects, seeking solutions initially by trial and error and later through scientific study. The final part of the book looks to the future and discusses the threats to a number of great cities and what has been done to counter them. This fascinating history, written with humour and affection, pays tribute to the largely unknown 'backroom boys' of construction, whose work usually attracts attention only when things go wrong.

Despite the urgency of the mission, however, neither hide nor hair of them have been seen...

Isaac Asimov's Foundation Trilogy is one of the high-water marks of science fiction. It is the monumental story of a Galactic Empire in decline, and the secret society of scientists who seek to shorten the inevitable Dark Age with the science of psychohistory. Now, with the permission -- and blessing -- of the Asimov estate, the epic saga continues. Fate -- and a cruel Emperor's arbitrary power -- have thrust Hari Seldon into the First Ministership of the Empire against his will. As the story opens, Hari is about to leave his quiet professorship and take on the all but impossible task of administering 25 million inhabited worlds from the all-steel planet of Trantor. With the help of his beautiful bio-engineered "wife" Dors and his alien companion Yugo, Seldon is still developing the science that will transform history, never dreaming that it will ultimately pit him against future history's most awesome threat.

One moment Joseph Schwartz is a happily retired tailor in Chicago, 1949. The next he's a helpless stranger on Earth during the heyday of the first Galactic Empire. Earth, as he soon learns, is a backwater, just a pebble in the sky, despised by all the other 200 million planets of the Empire because its people dare to claim it's the original home of man. And Earth is poor, with great areas of radioactivity ruining much of its soil—so poor that everyone is sentenced to death at the age of sixty. Joseph Schwartz is sixty-two. This is young Isaac Asimov's first novel, full of wonders and ideas, the book that launched the novels of the Galactic Empire, culminating in the Foundation series. This is Golden Age SF at its finest. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

On the beautiful Outer World planet of Solaria, a handful of human colonists lead a hermit-like existence, their every need attended to by their faithful robot servants. To this strange and provocative planet comes Detective Elijah Baley, sent from the streets of New York with his positronic partner, the robot R.
