Colour Atlas of Ophthalmology, Second Edition provides information pertinent to the fundamental aspects of ophthalmology. This book provides the correct diagnosis and treatment of many ocular disorders. Organized into 11 chapters, this edition begins with an overview of the process of assessment of a patient with eye disease, which includes taking a good history, examining the eyes with adequate illumination, and testing the visual function. This text then describes

exophthalmos, which is the most common condition of the orbit and indicates the possibility of thyroid disease or a space-occupying lesion. Other chapters consider the common causes of ocular injuries, including injury from flying particles, sharp instruments, chemicals, and ocular injury associated with head injury. The final chapter deals with the common, therapeutic, and diagnostic ocular drugs. This book is a valuable resource for ophthalmologists, physicians, nurses, students, and all those paramedical personnel who have to deal with common eye disease.

Every researcher or diagnostician working with reptiles has faced the challenge of identifying reptile

hemoparasites and then determining whether they are of importance or merely incidental. Another challenge is how to easily find the information required to make the proper identification. A distillation of knowledge from world-renowned expert Sam R. Telford, Jr, *Hemoparasites of the Reptilia: Color Atlas and Text* provides a comprehensive compilation of information on how to differentiate between the myriad species of reptile hemoparasites. The atlas provides diagnoses for 262 species of plasmodiids, hemogregarines, hemococcidians, trypanosomes, and leishmanias, including descriptions of eight new species or new taxonomic designations. It also discusses lesser known groups, such as piroplasms,

rickettsiae, chlamydia, and erythrocytic viruses. Each genus and many species are represented among the 166 taxa illustrated in color. The species accounts contain host and geographic distribution, with precise localities when possible, prevalence, life cycles and vectors when known, effects upon the host, and ecology of the host-parasite relationship, morphological variation, and an exhaustive bibliography. The book also includes an illustrated key showing diagnostic characters. Telford draws on his 45 years of experience and his personal collection, considered the world's most complete, to provide information on the morphology of the unicellular parasites of reptilian blood. He includes information from hard-to-find original papers and articles from

sources throughout the world. The illustrated key and photomicrographs from Telford's collection make identifying species quicker and easier. Color Atlas of Oral Diseases Lippincott Williams & Wilkins

This atlas will focus on the classification, multidisciplinary approach, recognition and identification, and treatment options for this class of pathology. Vascular malformations, composed of malformed vessels, never regress and sometimes expand rapidly. They occur in any body part including

viscera. They cause cosmetic problems, functional disability and can be life threatening and require radiologic imaging and pathology to recognize and perform differential diagnosis on various vascular anomalies. In addition, new techniques, including molecular biology procedures, have evolved allowing less invasive and a more effective approach to diagnosis and treatment.
