From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

Due to the adverse outcomes of the recent global recession and the public deficit crisis in the USA and Europe, Western companies can expect flattening or declining sales in their domestic markets. They will also face growing competition as Chinese firms seek to block the activities of foreign companies in their domestic market and expand their own operations in overseas markets. Survival and growth for Western companies is unlikely to come from sustaining current business practices based upon utilization of conventional approaches to strategic management; success will depend on exploiting new knowledge to stay ahead of competition. This book examines the strategic issues associated with the entrepreneurial utilization of new knowledge to create innovative products and services, accompanied by the development of leading edge, highly productive internal organizational processes. Through the use of appropriate theories and illustrative case examples, the text is designed to assist managers in Western organizations and business school students understand how to counter the increasing threats that are posed by the globalization of companies from emerging countries such as the BRIC nations.

Albania provides a small amount of social assistance to nearly

20% of its population through a system which allows a degree of community discretion in determining distribution. This study investigates the poverty targeting of this program. It indicates that relative to other safety net programs in low income countries, social assistance in Albania is fairly well targeted to the poor.
