The Magnesium Technology Symposium, which takes place every year at the TMS Annual Meeting & Exhibition, is one of the largest yearly gatherings of magnesium specialists in the world. Papers are presented in all aspects of the field, ranging from primary production to applications to recycling. Moreover, papers explore everything from basic research findings to industrialization. Magnesium Technology 2011 covers a broad spectrum of current topics, including alloys and their properties; cast products and processing; wrought products and processing; forming, joining, and machining; corrosion and surface finishing; ecology; and structural applications. In addition, you'll find coverage of new and emerging applications in such areas as biomedicine and hydrogen storage.

The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873)

This series is designed to cover all aspects of sound financial management for local governments in developed and developing countries and economies in transition. Concepts of good governance, transparency and accountability are woven into the text of every chapter, and the needs and potential obstacles to greater decentralization and democracy are highlighted. Each volume is self-contained with its own Trainer's Guide, exercises and web resources. Chapters are divided into basic and advanced concepts and the detailed relationship of each topic to the others covered in the series is explained.

Fourteen contributions from mechanical engineering instructors and industry professionals discuss various subjects in mechanical engineering technology as they relate to education. Topics include, for example, a description of a student exchange program with Siemens- Westinghouse and the U. of Central Florida; a visual basic program used to help engineering students to calculate gear features; and undergraduate research into motorsports safety at U. of North Carolina, Charlotte. The

volume is not indexed. c. Book News Inc.

In the past decade, feature-based design and manufacturing has gained some momentum in various engineering domains to represent and reuse semantic patterns with effective applicability. However, the actual scope of feature application is still very limited. Semantic Modeling and Interoperability in Product and Process Engineering provides a systematic solution for the challenging engineering informatics field aiming at the enhancement of sustainable knowledge representation, implementation and reuse in an open and yet practically manageable scale. This semantic modeling technology supports uniform, multi-facet and multi-level collaborative system engineering with heterogeneous computer-aided tools, such as CAD/CAM, CAE, and ERP. This presented unified feature model can be applied to product and process representation, development, implementation and management. Practical case studies and test samples are provided to illustrate applications which can be implemented by the readers in real-world scenarios. By expanding on well-known feature-based design and manufacturing approach, Semantic Modeling and Interoperability in Product and Process Engineering provides a valuable reference for researchers, practitioners and students from both academia and engineering field.

A new edition of the most popular book of project management case studies, expanded to include more than 100 cases plus a "super case" on the Iridium Project Case studies are an important part of project management education and training. This Fourth Edition of Harold Kerzner's Project Management Case Studies features a number of new cases covering value measurement in project management. Also included is the well-received "super case," which covers all aspects of project management and may be used as a capstone for a course. This new edition: Contains 100-plus case studies drawn from real companies to illustrate both successful and poor implementation of project management Represents a wide range of industries, including medical and pharmaceutical, aerospace, manufacturing, automotive, finance and banking, and telecommunications Covers cutting-edge areas of construction and international project management plus a "super case" on the Iridium Project, covering all aspects of project management Follows and supports preparation for the Project Management Professional (PMP®) Certification Exam Project Management Case Studies, Fourth Edition is a valuable resource for students, as well as practicing engineers and managers, and can be used on its own or with the new Eleventh Edition of Harold Kerzner's landmark reference, Project Management: A Systems Approach to Planning, Scheduling, and Controlling. (PMP and Project Management Professional are registered marks of the Project Management Institute, Inc.)

Jute plays an important role in the economies of South Asian countries. In India alone it sustains

some four million families. *Jute: Regional Focus* summarizes the jute sector in countries like India, Bangladesh, China, Nepal, Thailand, Myanmar and Brazil. Starting from raw material availability, it mentions the consumption, production, export and import of jute fiber and products. It also highlights the problems afflicting the jute sector like stagnant yield, lack of improvement in quality, unremunerative price to the growers, rising cost of production, considerable competition from the synthetic sector, demand erosion, obsolescence of machinery, uneconomic working etc. The book also discusses the competitive strength of jute as against synthetics, possibilities of cost reduction, jute in relation to the environment and the achievements of International Jute Organisation. It also offers an insight into the implications involved in regional cooperation among the jute producing countries. It identifies the components of regional cooperation and investigates the importance and indispensability of regional cooperation with reference to critical issues in the jute sector, besides highlighting the specific areas where some jute producing countries have contributed significantly. Some instances where India has performed well in the field of diversification are given too.

This book is the result of lessons, tutorials and other laboratories dealing with applied mechanical design in the universities and colleges. In the classical literature of the mechanical design, there are quite a few books that deal directly and theory and case studies, with their solutions. All schools, engineering colleges (technical) industrial and research laboratories and design offices serve design

works. However, the books on the market remain tight in the sense that they are often works of mechanical constructions. This is certainly beneficial to the ordinary user, but the organizational part of the functional specification items is also indispensable.
