and has been used as a primary form of mineral concentration for centuries. Due to its high efficiency and low cost, gravity separation is always the first consideration in any flowsheet development program and always features in any flowsheet where there is sufficient differences between the specific gravity of the valuable and gangue minerals. Gravity Separation - SGS Gravity separation is the best-proven and accepted technique of concentrating minerals and SGS has significant expertise with this technology for many commodities. Gravity separation is an attractive unit operation as it generally has low capital and operating costs, uses few of any chemicals that might cause environmental concerns and the recent development of new equipment enhances the range of separations possible. Gravity Separation | Mining | SGS Chile SGS has significant expertise incorporating gravity separation in gold flowsheets. Gravity Separation | Mining | SGS South Africa Gravity separation is the best-proven and accepted technique of concentrating minerals and SGS has significant expertise with this technology for many commodities. Gravity Separation | SGS Philippines Gravity separation can quickly generate a precious metal concentrate that can be sold direct to refineries, resulting in better payment terms, faster payback and immediate cash-flow. The small footprint of these gravity plants means less capital outlay and better security for small-volume, high-value concentrates.
