Session by Luke Ahmed

Security Systems Technician, Certificate, Full-time - BCIT

The Security Systems Technician Program focuses on hands-on training, using real-life situations. As a student, you will work with tools and equipment in a variety of settings, including a client's house. You will spend some of your

time in class, but slightly more than half your time as a student here will be spent on practical activities.

Security Installation

Training

Security Systems

Training. An important part of implementing new security technology is ensuring your employees and staff understand the technology and how to run it efficiently. We want to partner with you in this process to

ensure you can take the greatest advantage of your system. STANLEY Security can provide training on-site at your company, online, or at our Learning Center training facility in Indianapolis, IN.

Security Systems Training

Programs: Initial And Ongoing ...

There are two main focuses for alarm system training: intrusion and fire detection. Professional

organizations, such as the Automatic Fire Alarm Association, and alarm system manufacturers and...	integrators who work with our products and systems. Our training is designed to help you install and run complex projects faster, smoother and more	profitably. Tests conducted by Bosch show that technicians work both more efficiently and effectively following their training in our academy.
