"With the collapse of the Soviet Union, newly independent states sprang up along China's western frontier. Suddenly, Beijing was forced to confront internal challenges to its authority at its border as well as international competition for energy and authority in Central Asia. Hasan Karrar traces how China cooperated with Russia and the Central Asian republics seeking to stabilize the region, facilitate commerce, and build an energy infrastructure. He also shows how this multilateral approach brought Beijing into direct competition with the United States, which views Central Asia as vital to its strategic interests."--BOOK JACKET.

The team splits into two camps, those who believe in Daren's innocence and those who take Lou's side. The fight heats up when Daren falls victim to an outrageous act. But did Lou retaliate, as Daren suspects, or is someone else trying to teach Daren a lesson?

A new translation of *Un río, un amor* (One River, One Love) by Luis Cernuda (1902-1963). Written in France and Spain in 1928-1929, this collection reflects the influences, conflicts and impulses that governed the poet's life then and is faithful to the author's quasi-Surrealist intentions.

The first volume in a new Springer Series on Shipping and Transport Logistics, *Oil Transport Management* provides a full historical account of the evolution of the oil transport industry since the 1800's. In this comprehensive guide, the authors investigate the industry and describe the shipping market and its structure, as well as forecasting, location plan and the transportation chain. They dedicate a separate chapter to each topic to cover various concepts, including: an introduction to the tanker shipping market, including how the freight, new vessel building, second hand and demolition markets influence one another, the economic structure and organization of the tanker industry in both the past and present, and forecasting the need for oil-based sea transportation. Further chapters present case studies and simulations to illustrate the importance of factory location decisions and the need for oil infrastructure investments. Chapter One also includes a regression equation to predict the fleet size in tanker shipping. *Oil Transport Management* is a key reference, which can be practically applied to wider global research and practices. Ideal for both industry practitioners, and researchers and students of shipping studies, *Oil Transport Management* provides a concise yet comprehensive coverage of the oil transport industry's history and a guide for its future development.

*Top-Down VLSI Design: From Architectures to Gate-Level Circuits and FPGAs* represents a unique approach to learning digital design. Developed from more than 20 years teaching circuit design, Doctor Kaeslin's approach follows the natural VLSI design flow and makes circuit design accessible for professionals with a background in systems engineering or digital signal processing. It begins with hardware architecture and promotes a system-level view, first considering the type of intended application and letting that guide your design choices. Doctor Kaeslin presents modern considerations for handling circuit complexity, throughput, and energy efficiency while preserving functionality. The book focuses on application-specific integrated circuits (ASICs), which along with FPGAs are increasingly used to develop products with applications in telecommunications, IT security, biomedical, automotive, and computer vision industries. Topics include field-programmable logic, algorithms, verification, modeling hardware, synchronous clocking, and more. Demonstrates a top-down approach to digital VLSI design. Provides a systematic overview of architecture optimization techniques. Features a chapter on field-programmable logic devices, their technologies and architectures. Includes checklists, hints, and warnings for

various design situations. Emphasizes design flows that do not overlook important action items and which include alternative options when planning the development of microelectronic circuits.
