LILLY DEANDRE

Distributed Computer and Communication Networks: Control, Computation, Communications
 Springer Nature

From the cofounder of the longest-running Bitcoin exchange comes a compelling argument for how this digital currency will transform the global economy—and how it can work for you. A financial revolution is materializing before our eyes. The way individuals, organizations, and governments conduct transactions—from purchasing a book online to acquiring major corporations to delivering billions in financial aid—will look vastly different in the near future. Bitcoin is spearheading this revolution and may be the best investment opportunity of our time, yet most people have yet to understand its promise. In this book, Bobby C. Lee, one of the earliest, most successful pioneers in the cryptocurrency space, debunks myths and dispels fears that surround Bitcoin, arguing that this rational, logical system is superior to traditional monetary systems. He cites signs of Bitcoin's widening acceptance: a growing community of users worldwide and multiple initiatives for

investing in and holding bitcoin among major financial services organizations and institutional investors who control trillions in assets. Lee offers a primer on the best strategies for investing in this digital currency, the value of which will only continue to grow. He discusses the pros and cons, and covers the complicated yet more profitable method of acquiring bitcoin, mining. He offers predictions for the future, including price, trajectory, use, and participation in the larger economy—as well as developments in regulation, technology, business, and society. Invest in the promise of Bitcoin today.

Democratizing Finance McGraw Hill Professional

This book constitutes the refereed proceedings of the informatics and cybernetics in intelligent systems section of the 10th Computer Science Online Conference 2021 (CSOC 2021), held online in April 2021. Modern cybernetics and computer engineering papers in the scope of intelligent systems are an essential part of actual research topics. In this book, a discussion of modern algorithms approaches techniques is held. .

The Collected Writings of Bitcoin Creator Satoshi Nakamoto Bloomsbury Publishing

This book includes selected papers from the International Conference on Data Science and

Intelligent Applications (ICDSIA 2020), hosted by Gandhinagar Institute of Technology (GIT), Gujarat, India, on January 24–25, 2020. The proceedings present original and high-quality contributions on theory and practice concerning emerging technologies in the areas of data science and intelligent applications. The conference provides a forum for researchers from academia and industry to present and share their ideas, views and results, while also helping them approach the challenges of technological advancements from different viewpoints. The contributions cover a broad range of topics, including: collective intelligence, intelligent systems, IoT, fuzzy systems, Bayesian networks, ant colony optimization, data privacy and security, data mining, data warehousing, big data analytics, cloud computing, natural language processing, swarm intelligence, speech processing, machine learning and deep learning, and intelligent applications and systems. Helping strengthen the links between academia and industry, the book offers a valuable resource for instructors, students, industry practitioners, engineers, managers, researchers, and scientists alike.

Origin of a Specie™ Springer Nature

The purpose of the book is to provide a broad-based accessible introduction to three of the

presently most important areas of computational finance, namely, option pricing, algorithmic trading and blockchain. This will provide a basic understanding required for a career in the finance industry and for doing more specialised courses in finance.

Springer Nature

This book constitutes the refereed proceedings of the 23rd International Conference on Distributed and Computer and Communication Networks, DCCN 2020, held in Moscow, Russia, in September 2020. Due to the COVID-19 pandemic the conference was held online. The 43 papers were carefully reviewed and selected from 167 submissions. The papers are organized in the following topical sections: computer and communication networks and technologies; analytical modeling of distributed systems, and distributed systems applications.

The Industries of the Future Nft Cryptocurrency Investment Guides

Energy has a wide range of uses within a country, including socially and economically. Providing everything from warmth and light to raw materials for industrial production, energy is an essential need for countries. Due to the importance of energy for countries, energy policies are extremely vital, and energy needs to be affordable, eco-friendly, and continuous so countries can provide for their people and continue to develop industrially. Without the availability of energy that is cheap and continuous, the effectiveness in the energy supply process will be reduced, and society will experience difficulties in having its daily energy needs met. The Handbook of Research on Strategic Management for Current Energy Investments analyzes current trends in energy production and use and identifies energy investment strategies in order to support affordable and available energy for all. Chapters within the book cover technological developments that contribute to the reduction of price in energy production as well as renewable energy sources that provide continuity in energy production but do not emit carbon into the atmosphere. This book highlights topics that cover environmental pollution, energy pricing, economic growth, carbon dioxide emission, and energy management. It is ideal for engineers, technicians, managers, researchers, academicians, policymakers, government officials, and students in related fields.

Blockchain Technology in Healthcare Applications Springer Nature

This book addresses one of the most overlooked practical, methodological, and moral questions in the journey to secure and handle the massive amount of data being generated from smart devices interactions: the integration of Blockchain with 5G-enabled IoT. After an overview, this book discusses open issues and challenges, which may hinder the growth of Blockchain technology. Then, this book presents a variety of perspectives on the most pressing questions in the field, such as: how IoT can connect billions of objects together; how the access control mechanisms in 5G-enabled industrial environment works; how to address the real-time and quality-of-service requirements for industrial applications; and how to ensure scalability and computing efficiency. Also, it includes a detailed discussions on the complexity of adoption of Blockchain for 5G-Enabled IoT and presents comparative case studies with respect to various performance evaluation metrics such as scalability, data management, standardization, interoperability and regulations, accessibility, human-factors engineering and interfaces, reliability, heterogeneity, and QoS requirements. This book acts as a professional guide for the practitioners in information security and related topics.

Or Become a NFT Digital Artist with Easy How To Instructions CRC Press

This book focuses on the building of a crypto economy as an alternative economic space and discusses how the crypto economy should be governed. The crypto economy is examined in its productive and financialised aspects, in order to distil the need for governance in this economic space. The author argues that it is imperative for regulatory policy to develop the economic governance of the blockchain-based business model, in order to facilitate economic mobilisation and wealth creation. The regulatory framework should cater for a new and unique enterprise organisational law and the fund-raising and financing of blockchain-based development projects. Such a regulatory framework is crucially enabling in nature and consistent with the tenets of regulatory capitalism. Further, the book acknowledges the rising importance of private monetary orders in the crypto economy and native payment systems that do not rely on conventional institutions for value transfer. A regulatory blueprint is proposed for governing such monetary orders as 'commons' governance. The rise of Decentralised Finance and other financial innovations in the crypto economy are also discussed, and the book suggests a framework for regulatory consideration in this dynamic landscape in order to meet a balance of public interest objectives and private interests. By setting out a reform agenda in relation to economic and financial governance in the crypto economy, this forward-looking work argues for the extension of

'regulatory capitalism' to this perceived 'wild west' of an alternative economic space. It advances the message that an innovative regulatory agenda is needed to account for the economically disruptive and technologically transformative developments brought about by the crypto economy.

Cryptocurrencies and Blockchain Technology Simon and Schuster

This book focuses on using artificial intelligence (AI) to improve blockchain ecosystems. Gathering the latest advances resulting from AI in blockchain data analytics, it also presents big data research on blockchain systems. Despite blockchain's merits of decentralisation, immutability, non-repudiation and traceability, the development of blockchain technology has faced a number of challenges, such as the difficulty of data analytics on encrypted blockchain data, poor scalability, software vulnerabilities, and the scarcity of appropriate incentive mechanisms. Combining AI with blockchain has the potential to overcome the limitations, and machine learning-based approaches may help to analyse blockchain data and to identify misbehaviours in blockchain. In addition, deep reinforcement learning methods can be used to improve the reliability of blockchain systems. This book focuses in the use of AI to improve blockchain systems and promote blockchain intelligence. It describes data extraction, exploration and analytics on representative blockchain systems such as Bitcoin and Ethereum. It also includes data analytics on smart contracts, misbehaviour detection on blockchain data, and market analysis of blockchain-based cryptocurrencies. As such, this book provides researchers and practitioners alike with valuable insights into big data analysis of blockchain data, AI-enabled blockchain systems, and applications driven by blockchain intelligence.

Techno-Social and Legal Challenges Greenhaven Publishing LLC

The innovative investor's guide to an entirely new asset class—from two experts on the cutting edge With the rise of bitcoin and blockchain technology, investors can capitalize on the greatest investment opportunity since the Internet. Bitcoin was the first cryptoasset, but today there are over 800 and counting, including ether, ripple, litecoin, monero, and more. This clear, concise, and accessible guide from two industry insiders shows you how to navigate this brave new blockchain world—and how to invest in these emerging assets to secure your financial future. Cryptoassets gives you all the tools you need: * An actionable framework for investigating and valuing cryptoassets * Portfolio management techniques to maximize returns while managing risk * Historical context and tips to navigate inevitable bubbles and manias * Practical guides to exchanges, wallets, capital market vehicles, and ICOs * Predictions on how blockchain technology may disrupt current portfolios In addition to offering smart investment strategies, this authoritative resource will help you understand how these assets were created, how they work, and how they are evolving amid the blockchain revolution. The authors define a clear and original cryptoasset taxonomy, composed of cryptocurrencies, cryptocommodities, and cryptotokens, with insights into how each subset is blending technology and markets. You'll find a variety of methods to invest in these assets, whether through global exchanges trading 24/7 or initial cryptoasset offerings (ICOs). By sequentially building on the concepts of each prior chapter, the book will provide you with a full understanding of the cryptoasset economy and the opportunities that await the innovative investor. Cryptoassets represent the future of money and markets. This book is your guide to that future.

Blockchain to the Rescue E53 Publishing LLC

Financial technology—or fintech—is gaining in popularity globally as a way of making financial services more efficient and accessible. In rapidly developing China, fintech is taking off, catering to markets that state-owned banks and an undersized financial sector do not serve amid a backdrop of growing consumption and a large, tech-savvy millennial generation. It is becoming increasingly likely that some of China's fintech firms will change the way the world does business. In China's Fintech Explosion, Sara Hsu and Jianjun Li explore the transformative potential of China's financial-technology industry, describing the risks and rewards for participants as well as the impact on consumers. They cover fintech's many subsectors, such as digital payment systems, peer-to-peer lending and crowdfunding, credit card issuance, internet banks, blockchain finance and virtual currencies, and online insurance. The book highlights the disruption of traditional banking as well as the risks of fintech and regulatory technology. Hsu and Li describe major companies including

Alipay and Tencent, developer of WeChat Pay and a wealth-management business, and other leading fintech firms such as Creditease, Zhong An Insurance, and JD Finance. Offering expert analysis of market potential, risks, and competition, as well as case studies of firms and consumer behavior, China's Fintech Explosion is a must-read for anyone interested in one of the world's breakout sectors.

Are you looking for ways to make money with NFTs but don't know where to start? Do you want to learn how to start your own NFTs business, understand minting, learn how to buy or perhaps create and sell your own NFTs? This book will show you how can do all the above. The pandemic accelerated digital technological changes overnight. And so NFTs became a legitimate business with real trading. "NFT Market Rages On: NFTs Market Cap Grow 1,785% In 2021 As Demand Explodes" - Forbes 29 March 2021 The demand for NFTs is continuing to surge and the NFT market is showing no signs of slowing down. A lot of people are making serious money. This book is about how and why NFTs are good for business and/or investment and how a newcomer to NFTs can get all the info needed in one place and get started immediately. You will discover how to invest, buy, sell, trade, or create your own NFTs for selling on to investors or fans. It's also a book to change your perspective and start creating and selling your own NFTs whether you're an artist, a gamer, musician, etc. In this NFT Guide You Will Learn: Meaning of Non-Fungible Tokens How it works Future of NFT Technology & Assets How to make money with NFTs How to mint your own NFT How to Buy & Sell NFTs How to Trade NFTs on different marketplaces How to Start your NFT business as an artist My goal is to assist you so that you can take advantage of these fantastic opportunities. If there is a time to ever enter the NFTs economy, the time is now. Beeble became a \$70million selling NFT artist. Who's next? If you missed out on the popularity of cryptocurrencies then you don't want to blunder this opportunity.

The new wave for Industrial Automation MQCC™ Money Quality Conformity Control Organization incorporated as MortgageQuote Canada Corp.

We are only in the early stages of a broader revolution that will impact every aspect of the global economy, including commerce and government services. Coming financial technology innovations could improve the quality of life for all people. Over the past few decades, digital technology has transformed finance. Financial technology (fintech) has enabled more people with fewer resources, in more places around the world, to take advantage of banking, insurance, credit, investment, and other financial services. Marion Laboure and Nicolas Deffrennes argue that these changes are only the tip of the iceberg. A much broader revolution is under way that, if steered correctly, will lead to huge and beneficial social change. The authors describe the genesis of recent financial innovations and how they have helped consumers in rich and poor countries alike by reducing costs, increasing accessibility, and improving convenience and efficiency. They connect the dots between early innovations in financial services and the wider revolution unfolding today. Changes may disrupt traditional financial services, especially banking, but they may also help us address major social challenges: opening new career paths for millennials, transforming government services, and expanding the gig economy in developed markets. Fintech could lead to economic infrastructure developments in rural areas and could facilitate emerging social security and healthcare systems in developing countries. The authors make this case with a rich combination of economic theory and case studies, including microanalyses of the effects of fintech innovations on individuals, as well as macroeconomic perspectives on fintech's impact on societies. While celebrating fintech's achievements to date, Laboure and Deffrennes also make recommendations for overcoming the obstacles that remain. The stakes—improved quality of life for all people—could not be higher.

Northern Ireland Colchis Books

In 2011 the World Bank—with funding from the Bill and Melinda Gates Foundation—launched the Global Findex database, the world's most comprehensive data set on how adults save, borrow, make payments, and manage risk. Drawing on survey data collected in collaboration with Gallup, Inc., the Global Findex database covers more than 140 economies around the world. The initial survey round was followed by a second one in 2014 and by a third in 2017. Compiled using nationally representative surveys of more than 150,000 adults age 15 and above in over 140 economies, The Global Findex Database 2017: Measuring Financial Inclusion and the Fintech Revolution includes updated indicators on access to and use of formal and informal financial services. It has additional data on the use of financial technology (or fintech), including the use of mobile phones and the Internet to conduct financial transactions. The data reveal opportunities to

expand access to financial services among people who do not have an account—the unbanked—as well as to promote greater use of digital financial services among those who do have an account. The Global Findex database has become a mainstay of global efforts to promote financial inclusion. In addition to being widely cited by scholars and development practitioners, Global Findex data are used to track progress toward the World Bank goal of Universal Financial Access by 2020 and the United Nations Sustainable Development Goals. The database, the full text of the report, and the underlying country-level data for all figures—along with the questionnaire, the survey methodology, and other relevant materials—are available at www.worldbank.org/globalfindex.

[Regulating Blockchain](#) World Bank Publications

Cryptocurrency is an electronic money created with technology controlling its creation and protecting transactions, while hiding the identities of its users. Crypto - is short for "cryptography", and cryptography is computer technology used for security, hiding information, identities and more. Cryptocurrencies are digital cash designed to be quicker, cheaper and more reliable than our regular government issued money. Instead of trusting a government to create your money and banks to store, send and receive it, users transact directly with each other and store their money themselves.

Welcome to the public disclosure of the world's first body of required reading for ALL duly appointed, lawfully elected or employed persons in public office or in private enterprise, as leaders; legislators, policymakers; regulators; technical experts; scientists; members of Top Management; global professional liability insurers including corporate risk insurers; legal professionals; law enforcement; and business persons; promoters; consultants; investors; students - in at least 119 countries - who seek primary source, traceable, verifiable and immutable knowledge on the origins, commercialization, litigation-testing and National and International Standardization of the "Principles of 'BlockChain'" and related concept system subject matter: including but not limited electronic peer-to-peer finance (non-bank, non-institutional, non-syndicated, non-regulated or regulatory exempt, free trading; (P2P)/Private/Crypto/Secret/Shadow) utility tokens, securities token. This global public disclosure is designed to be your practical and scholarly, primary source knowledge commencing from at least as early as 14-August-2001 until present day (September 2019 - or as of latest update) on the origin of the "Principles of 'BlockChain'" and related concept system matter; and is designed to be relied upon as a legislative-, regulatory-, public policy-making-, academic-, business-, investment-, professional-, technical-, and scientific reference, now and into the future. As an electronic - (intellectual property token; trademark brand: MQCC InPUT™) - format encyclopedic authoritative reference, this First Edition will be continually improved until the next edition is published. If you are a lawfully elected or duly appointed public official (Head of State, Senator, Minister, Legislator, Policy Maker, Regulator); lawfully elected, duly appointed or employed member of a regulated, reporting or private organization in the role of Top Management (Chief Executive Officer (CEO)- level or Board of Director-level) member; a legal professional; an professional liability insurance/organization risk underwriter; an investor, academic or interested person: before you spend any of your personal money (or any more personal money) and your valuable personal time on 'BlockChain'-anything or 'crypto'-anything; put this electronic reference [intellectual property utility token (distinctively known as the MQCC™-registered, global trademark: MQCC InPUT™)] in your personal library and learn directly from the person (Author) who: <*> first identified and commercialized (starting at least as early as April 9, 2005) a globally accessible, peer-to-peer electronic finance system; (cryptofinancial network). <*> first registered (starting at least as early as May 9, 2008) a subordinate Quality Management System to ISO 9001:2000; ISO 9001:2008 and the current risk-based ISO 9001:2015 in order to publicly prove to "the world", that the globally accessible system-network methods and products are better, safer, more efficient and in order to establish at-a-glance (prima facie) levels of trust - at a global scale; <*> Over the past 19 years, has personally introduced and educated the following classes of people on the origins and over-14 years of successfully commercialized, National and International consensus-standards-based, application of the overarching concept system including: the "Principles of 'BlockChain'; utility tokens, securities tokens, conformity science: *> public officials (Ministers, Legislators, Policy Makers, Regulators) *> lawyers employed by law enforcement agencies *> lawyers employed by public market securities regulators *> CEO's, Executive Officers, members of Top Management of regulated, reporting or private business organizations *> retail customers (investors and investees) *> and more <*> Developed, what is today, the world's most trusted and trustworthy global system-network of its kind that, for over 12 years, meets and exceeds

United States a (US) Department of Defense (DoD), General Services Administration (GSA), and the National Aeronautics and Space Administration (NASA) Higher-level contract quality requirements and integrates elements of the globally trusted US National Institute of Standards and Technology (NIST) Framework Core for Improving Critical Infrastructure Cybersecurity. This encyclopedic authoritative reference takes you from the start, from at least as early as 14-August-2001 to Present day (September 2019). Now that this compendium is published, if any consultant or business promoter, anywhere in the world (at least in 119 countries where ISO 9000 is considered a National Standard class of family of standards) on matters claims to know what he or she is talking about and has not proven to you that they have read this important work of public disclosure, then they really don't know scientific-based, historically-accurate, information timeline. -> Learn how the Author has been telling CryptoExchange CEO's to learn the MQCC Standards™, so they can make their cryptoexchanges better, safer and more efficient for the inexperienced global public and regulatory community -- months (and years) before sad events occurred when some exchanges suffered catastrophic shutdowns because Top Management did not have and still do not have, the historically proven systems that they need to assure better, safer and more efficient cryptofinancial operations; which MQCC developed. --> Learn how some CEO's or Top Management of Banks and Public Securities Exchanges have been explained that an over 14 year-old fully functional system built on the "Principles of 'BlockChain'" exists and will prevent corporate shareholder financial loss caused by risk due to uncertainty created by nonconformity events like mortgage fraud and ineffective public (reporting securities issuer) company operators. -> Learn how a proven regulatory-integrated framework of co-existence between public securities regulators and non-public securities regulators and regulatees has evolved since at least as early as August 14, 2001. -> Learn how the term Bungay Unification of Quantum Processes Algorithm also represented as the "Principles of 'BlockChain'" was abstracted from observation of the originating object or phenomenon. -> Learn how to find out who is a competent consultant and who is not a competent consultant on matters related to the "Principles of 'BlockChain'" -> Learn how to the global community has misunderstood the origins and wasted (in some cases, literally) millions of dollars in ideas that are "BlockChain-in-Name-Only". -> Learn how "The Principles of 'BlockChain'" have nothing to do with computer programming language C++; which was used to program the bitcoin, alpha-state, experimental software program. -> Learn about the discovery and commercialization of SYSTEMS-LEVEL Artificial Intelligence (SL) by the yours sincerely. -> Learn how commercially available suite of systems, technology, services and products work for any size organization: 1 owner-operator to an organization with 1,000,000 million employees and more. This encyclopedic authoritative reference will be your best investment in this subject matter, ever. More about this encyclopedic authoritative reference The "Principles of 'BlockChain'" were naturally discovered out of a need to create a governance and operating system for the world's first "peer-to-peer (P2P) electronic finance system-network" for the trade in non-bank, non-institutional, non-syndicated, non-regulated or regulatory exempt, free trading securities and related financial instruments; commencing from at least as early as August 14, 2001. As a reminder, before you invest or spend any money on "BlockChain"-anything, or "crypto"-anything; learn from the person who first discovered and then commercialized it, since at least as early as April 9, 2005 at www.privatelender.org; a person who also happens to be the world's leading authority on National and International Standards-Class NISC™ (in at least 119 countries), Quality Management System-integrated, regulatory-integrated, litigation-tested, BlockChain-based Systems, Technology, Services and Products. WARNING: If you have any question of comprehension or understanding, seek professional counsel before you - another friendly reminder - spend even one more unit of fiat currency ("real" money) on any "BlockChain" or "Crypto" project. Ask your local legislator, lawyer or, in the future your local conformity scientist and PROFESSIONAL BLOCKCHAINEER™/®. Remember this authoritative encyclopedic reference is written by the person who developed the world's first commercialized an application of the "Principles of 'BlockChain'" in Commerce for a peer-to-peer electronic finance system. A body of transmundane knowledge encompassing a variety of knowledge disciplines. Having built "it" first and having built "it" right, means - despite being the CEO of a commercial finance sector organization - the Author is more or less "under the radar" from the scrutiny of the general public due to successful application of the sub-principle "effective disintermediation"; as such, nobody on Earth has really been afforded an opportunity to "look behind the history" - in a single, primary source compendium - to see how delicate, comprehensive, complex and beneficial conformity science and the "Principles of 'BlockChain'", truly are. Not to mention the painstaking diligent years

of maintaining the momentum. If you, your family, your company or your country is even "thinking" about investing limited sovereign resources and valuable time into the "Principles of 'BlockChain'", "crypto"-anything, "token"-anything and related matters (or want to be an authority on the subject), then learn about its origins, its regulatory-scrutinized, litigation-tested commercial applications of the present-day, and its future. Especially if you are (or will be, one day) employed as a Head of State, Legislator, Policymaker, Regulator, Lawyer, member of "Top Management" (Chief Executive Officer (CEO) or Board Member of a regulated or non-regulated Organization, Academic (student, undergraduate, graduate, doctoral, post-doctoral research), Journalist, Professional Liability Insurer, Investor, Head of a Family Office; or, if you are your normal, everyday person, just curious about the world. This work of scientific-commercial-regulatory-financial literature is both a public service and an introduction to the foundational body of knowledge that led to the discovery of the "Principles of 'BlockChain'", the birth of binary digit non-bank, non-institutional, non-syndicated, non-regulated or regulatory exempt, free trading securities and related financial instruments; also known as Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow securities and related financial instruments; Binary Digit Financial Instruments or Digital Assets and the Discovery of Conformity Science. It is the foundation of evolutionary digital commerce (a new field of science for the study of the evolutionary (revolutionary, perhaps?) processes related to the discovery of the "Principles of 'BlockChain'" and production of binary digit financial instruments (digital assets), systems, technologies, services and products. The body of evidence - as you would expect from the creator of a system built on principles that creates trust through transparency, immutability, validation, traceability and verifiability - is itself, traceable, verifiable, immutable and transparent. You will not find this content anywhere else. MQCC is the point of origination. The Bungay Unification of Quantum Processes Algorithm: when Quantum Unification Theory met Commerce. A revolutionary paradigm shift in how commerce is transacted, allowing for realizable quality, conformity and control goals to be achieved; resulting in long term, sustainable inflows of money. And lots of it. If you agree that the "Principles of 'BlockChain'" offer the utmost level of immutable data (knowledge) veracity, validity, verifiability, transparency, proof and truth; then you will understand the non-trivial implications of this history of the discovery of the "Principles of 'BlockChain'". Origin of a Specie™: an authoritative encyclopedic reference that only the discoverer of the world's first globally accessible, regulatory-recognized, regulatory-integrated and regulatory-trusted, commercialized "Principles of 'BlockChain'"-based system for the trade in non-bank, non-institutional, non-syndicated, non-regulated or regulatory exempt, free trading securities and related financial instruments; also known as Peer-to-Peer (P2P)/Private/Crypto/Secret/Shadow securities and related financial instruments (Binary Digit Utility Tokens for Digital Assets), could write.

Security and Trust Issues in Internet of Things Hachette UK

Less than a decade after the Financial Crisis, we are witnessing the fast emergence of a new financial order driven by three different, yet interconnected, dynamics: first, the rapid application of technology - such as big data, machine learning, and distributed computing - to banking, lending, and investing, in particular with the emergence of virtual currencies and digital finance; second, a disintermediation fuelled by the rise of peer-to-peer lending platforms and crowd investment which challenge the traditional banking model and may, over time, lead to a transformation of the way both retail and corporate customers bank; and, third, a tendency of de-bureaucratization under which new platforms and technologies challenge established organisational patterns that regulate finance and manage the money supply. These changes are to a significant degree driven by the development of blockchain technology. The aim of this book is to understand the technological and business potential of the blockchain technology and to reflect on its legal challenges. The book mainly focuses on the challenges blockchain technology has so far faced in its first application in the areas of virtual money and finance, as well as those that it will inevitably face (and is partially already facing, as the SEC Investigative Report of June 2017 and an ongoing SEC securities fraud investigation show) as its domain of application expands in other fields of economic activity such as smart contracts and initial coin offerings. The book provides an unparalleled critical analysis of the disruptive potential of this technology for the economy and the legal system and contributes to current thinking on the role of law in harvesting and shaping innovation.

This book provides stepwise discussion, exhaustive literature review, detailed analysis and discussion, rigorous experimentation results (using several analytics tools), and an application-oriented approach that can be demonstrated with respect to data analytics using artificial intelligence to make systems stronger (i.e., impossible to breach). We can see many serious cyber breaches on Government databases or public profiles at online social networking in the recent decade. Today artificial intelligence or machine learning is redefining every aspect of cyber security. From improving organizations' ability to anticipate and thwart breaches, protecting the

proliferating number of threat surfaces with Zero Trust Security frameworks to making passwords obsolete, AI and machine learning are essential to securing the perimeters of any business. The book is useful for researchers, academics, industry players, data engineers, data scientists, governmental organizations, and non-governmental organizations.

Proceedings of ICDSIA 2020 Raymundo Ramirez

The purpose of this edited book is to present and showcase the basic fundamentals, applications, and integration of both IoT and Blockchain. The trend of applying Blockchain to IoT is rapidly growing because it helps to overcome various challenges faced by IoT, from smart manufacturing

to unmanned aerial vehicles. This book aims to showcase the basics of both IoT and Blockchain as well as the integration and challenges for existing practitioners. This book initiates conversations among technologists, engineers, scientists, and clinicians to synergize their efforts in producing low-cost, high-performance, highly efficient, deployable IoT systems. This book is theory-based and is useful for engineers from various disciplines, including industrial engineering, computer science, electronics, telecommunications, electrical, agricultural, and cybersecurity, along with researchers, professionals, and students.
