"Chapter 1 An introduction to next-generation biological platforms Virginia Mohlere, Wenting Wang, and Ganiraju Manyam The University of Texas. MD Anderson Cancer Center 1.1 Introduction When Sanger and Coulson first described a reliable, efficient method for DNA sequencing in 1975 (Sanger and Coulson, 1975), they made possible the full sequencing of both genes and entire genomes. Although the method was resource-intensive, many institutions invested in the necessary equipment, and Sanger sequencing remained the standard for the next 30 years.

Refinement of the process increased read lengths from around 25 to 2 Mohlere, Wang, and Manyam almost 750 base pairs (Schadt et al., 2010, fig. 1). While this greatly increased efficiency and reliability, the Sanger method still required not only large equipment but significant human investment, as the process requires the work of several people. This prompted researchers and companies such as Applied Biosystems to seek improved sequencing techniques and instruments. Starting in the late 2000s, new instruments came on the market that, although they actually decreased read length, lessened run time and could be operated more easily with fewer human resources (Schadt et al., 2010). Despite discoveries that have illuminated new therapeutic targets,

clarified the role of specific mutations in clinical response, and yielded new methods for diagnosis and predicting prognosis (Chin et al., 2011), the initial promise of genomic data has largely remained so far unfulfilled. The difficulties are numerous"--

Secondary mathematics teachers are frequently required to take a large number of mathematics courses – including advanced mathematics courses such as abstract algebra – as part of their initial teacher preparation program and/or their continuing professional development. The content areas of advanced and secondary mathematics are closely connected. Yet, despite this connection many secondary

teachers insist that such advanced mathematics is unrelated to their future professional work in the classroom. This edited volume elaborates on some of the connections between abstract algebra and secondary mathematics, including why and in what ways they may be important for secondary teachers. Notably, the volume disseminates research findings about how secondary teachers engage with, and make sense of, abstract algebra ideas, both in general and in relation to their own teaching, as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development. Contributors to the book are scholars who have both experience in the mathematical preparation of

secondary teachers, especially in relation to abstract algebra, as well as those who have engaged in related educational research. The volume addresses some of the persistent issues in secondary mathematics teacher education in connection to advanced mathematics courses, as well as situates and conceptualizes different ways in which abstract algebra might be influential for teachers of algebra. *Connecting Abstract Algebra to Secondary Mathematics*, for Secondary Mathematics Teachers is a productive resource for mathematics teacher educators who teach capstone courses or content-focused methods courses, as well as for abstract algebra instructors interested in making connections to secondary mathematics.

Ultrasound in Liquid and Solid Metals

focuses on the effect of intensive ultrasound on metals, including the analysis of the development of cavitation and acoustic flows in melts, mechanism of metals' spraying and crystallization, the formation of dislocation structure in crystals, diffusion, phase transformation, and plastic deformation. Physical fundamentals of intensive ultrasound effects are covered, and detailed discussions are presented on the engineering principles of equipment and material design for the practical use of ultrasound in the refining of melts, crystallization of ingots and molds, pulverization, plating, pressure working of metals, surface strengthening, and

other processes.

VI of Oregon lectures in 1962, Bass gave simplified proofs of a number of "Morita Theorems", incorporating ideas of Chase and Schanuel. One of the Morita theorems characterizes when there is an equivalence of categories $\text{mod-}A$ R :! $\text{mod-}B$ for two rings A and B . Morita's solution organizes ideas so efficiently that the classical Wedderburn-Artin theorem is a simple consequence, and moreover, a similarity class $[A]$ in the Brauer group $\text{Br}(k)$ of Azumaya algebras over a commutative ring k consists of all algebras B such that the corresponding categories $\text{mod-}A$ and $\text{mod-}B$ consisting of k -linear morphisms are equivalent by a k -linear functor. (For fields, $\text{Br}(k)$ consists of similarity classes of simple

central algebras, and for arbitrary commutative k , this is subsumed under the Azumaya [51] and Auslander-Goldman [60] Brauer group.) Numerous other instances of a wedding of ring theory and category (albeit a shot gun wedding!) are contained in the text. Furthermore, in my attempt to further simplify proofs, notably to eliminate the need for tensor products in Bass's exposition, I uncovered a vein of ideas and new theorems lying wholly within ring theory. This constitutes much of Chapter 4 -the Morita theorem is Theorem 4. 29-and the basis for it is a correspondence theorem for projective modules (Theorem 4. 7) suggested by the Morita context. As a by-product, this provides foundation for a rather complete theory of simple Noetherian

rings-but more about this in the introduction.

Perhaps no state rivals Virginia when it comes to colonial history. Yet, there are many aspects of Virginia's early history that are either unknown or vaguely known by the general public. Over the last thirty years, Larson has written over thirty plays that deal with these aspects and the generally well-known men and women involved in them. These people include such names as Thomas Jefferson, John Marshall, Patrick Henry, Meriwether Lewis, John Robinson, Nathaniel Bacon, William Berkeley, John Chiswell, George Wythe, Martha Jefferson Randolph, Harry Lee, Nancy Randolph, John Randolph, Theodosia Burr and Edmund Pendleton.

 The second edition of this textbook provides undergraduate and postgraduate dental students with the most recent advances in oral pathology. Beginning with discussion on diagnostic techniques, the following chapters describe numerous diseases and disorders that may occur in the mouth, from dental caries and teeth anomalies, to cysts, tumours, infections and AIDS. The text continues with in depth examination of conditions located in the different areas of the mouth. This new edition is highly illustrated with more than 1000 clinical photographs, microphotographs, histopathology images and line diagrams. 'Points to remember' boxes are included for each

disease or disorder, and multiple choice questions at the end of each chapter help students test their knowledge. возможности пакета, но и последовательно рассказывается обо всех средствах, которые дает Photoshop в руки профессионала — художника-графика, веб-дизайнера, полиграфиста или фотографа — для решения самых разнообразных задач. Ориентация на опытных пользователей дала возможность включить в книгу достаточно сложные упражнения и практические примеры. Прилагаемый компакт-диск содержит электронные версии примеров к книге, комплект демонстрационных фильтров сторонних фирм и четыре дополнительные электронные главы. В них отражены некоторые аспекты как образовательного характера (для пользователей среднего и начального

уровня подготовки), так и специального, посвященного программе ImageReady, инструментам для подготовки изображений для Интернета, а также обзору возможностей ряда дополнительных фильтров, выпускаемых для Photoshop сторонними фирмами.

 WINNER OF THE VIRGINIA PRIZE FOR FICTION Living in post-revolutionary Tehran, Layla refuses to bow to the

ayatollahs' rules, resisting her mother's relentless attempts to find her a suitable husband. Instead, she embarks on an illicit affair with her art teacher, Keyvan, and they tentatively imagine a future together. But the sudden death of her uncle, an outspoken journalist, raises many unanswered questions and when Layla's cousin, who is visiting from America, is arrested by the morality police, the komiteh, Layla's plans for the future begin to unravel. "I was totally captivated by this novel. Layla is torn between her heart and the restrictions of her culture. She obeys her heart though not without a price. This wonderfully poetic story keeps you hooked right to the very end." - Stephanie Hale, author and broadcaster "a bittersweet tale of betrayed trust and ruptured innocence..."

the feel for colour and language is vibrant” - featured in The Guardian first novel selection “Vividly written, fresh and eloquent, a girl’s poignant tale of love and menace in contemporary Iran.” - Fay Weldon “I loved this book. It gives you real insight into the world of educated middle-class Iranians in the early 21st century. We are so used to the Iranians we meet in the UK that we do not realise how hard it is to live under their political regime at home. A joy to read.” - www.openingthebook.com

Louise Soraya Black Born in England in 1977 to an English mother and Iranian father. Her father worked for UNICEF so she spent 17 years living overseas, in countries including Iran, Pakistan, Bangladesh and Indonesia. In spite of all this travel, she had strong roots: the

family spent their summers in England and winter holidays in Iran. She began an English degree at University College London, but after a year switched to Law. She spent 8 years in corporate law but was unfulfilled so began writing in her spare time. She felt it was important to write about Iran because Iran is portrayed in the media as a bleak and oppressive place. She wanted to show Iran as a beautiful country, where the food is delicious, and Iranians are warm and hospitable. And while the media tends to paint a portrait of Iranian women as submissive and voiceless, this was not at all her experience so she created resilient and brave female characters in her novel. She had just about given up hope of finding a publisher for this novel, when she found

out that Pomegranate Sky had won the Virginia Prize, a new literary prize for unpublished women writers. She was astonished and overjoyed, particularly when the novel received excellent reviews. After the birth of her son, she didn't return to law and instead, decided to focus on her writing. She has just completed her second novel.
