Traditional theories on the anxiety disorders have focused on intrapersonal factors, such as cognitive, affective, behavioral, physiological, and genetic processes. Yet, those who treat and conduct research with anxious individuals know that interpersonal processes interact with anxiety symptoms. How can we begin to reconcile research and clinical experiences with current theoretical accounts? In this volume, editor J. Gayle Beck draws together, for the first time, the available knowledge about interpersonal factors in the anxiety disorders. The book begins with an overview of models and measures for conceptualizing and assessing interpersonal processes in the anxiety disorders. It then reviews the available literature on interpersonal processes

pertaining to specific disorders, including childhood and adolescent anxiety disorders, social anxiety disorder, obsessive compulsive disorder, posttraumatic stress disorder, panic disorder and agoraphobia, generalized anxiety disorder, and health anxiety. Throughout the book, clinical descriptions, etiological formulations, and information pertaining to comorbidity and treatment help to bridge the gap between clinical and research work. This groundbreaking book will appeal to everyone interested in anxiety disorders or interpersonal processes in psychopathology.

One of the most important and controversial themes in the contemporary dialogue among scientists and Christian theologians is the issue of "divine action" in the world. This volume brings together contributions from leading scholars on this topic, which emerged out of the Scientific Perspectives on Divine Action project, co-sponsored by the Vatican Observatory and the Center for Theology and Natural Science. This multi-year collaboration involved over 50 authors meeting at five international conferences. The essays collected here demonstrate the pervasive role of philosophy in this dialogue.

Audio Engineering for Sound Reinforcement Haynes Manuals N. America, Incorporated

In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view,

but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.
