### What Economics Can Learn from the Humanities Routledge

Social protection serves as an important development tool, helping to alleviate deprivation, reduce social risks, raise household income and develop human capital. This book brings together an interdisciplinary team of international experts to analyse social protection systems and welfare regimes across contemporary Latin America. The book starts with a section tracking the expansion of social assistance and social insurance in Latin America through the state-led development era, the neoliberal era and the pink-tide. The second section explores the role played by local and external actors modelling social policy in the region. The third and final section addresses a variety of contemporary debates and challenges around social protection and welfare in the region, such as gender roles and the empowerment of CCT beneficiaries, and welfare provision for rural outsiders. The book touches on key topics such as conditional cash transfer programmes, trade union inclusionary strategies, transnational social policy, state-led versus market-led welfare provision, explanatory factors in the emerging dualism of social protection institutions, social citizenship rights as a consequence of changing social policy architecture and different poverty reduction strategies. This interdisciplinary volume will be of interest to economists, political scientists, sociologists, anthropologists and historians working on social protection in Latin America, or interested in welfare systems in the global south.

This book presents the ways in which three key issues of the modern world – transformation, digitalisation and sustainability – may be combined for the greater good and highlights which activities may be designed to integrate these three directly linked paths. It is an experience-derived and evidence-based analysis of how sustainable development impacts the transformation of the economy and how the business environment influences economic transformation in the light of the sustainable development principles. The book addresses the current challenges and shows how the economy can be transformed further in an organic way that meets the needs of society and the environment, through the use of digital technologies. The multidisciplinary approach to sustainability transformation is one of the core strengths of the book, as it emphasises the need for a holistic approach to the functioning of sustainable development ideas at the micro- and macro-levels. The authors present a fresh perspective, particularly around the regulations stimulating the sustainable development of enterprises, tax systems, and the allocation of capital. Moreover, the book brings together and makes available the results of the latest research on the subject, using a vast amount of primary evidence and both quantitative and qualitative methodology. The authors' insights go beyond the obvious effects of economic transformation and call attention to ways in which smart technology and digitalisation may help to achieve the Sustainable Development Goals. The book is directed first and foremost towards academics, researchers and students, but also professionals, who would like to expand their knowledge of sustainable development from a scientific perspective.

How well do our assumptions about the global challenges of energy, environment and economic development fit the facts? Energy prices have varied hugely between countries and over time, yet the share of national income spent on energy has remained surprisingly constant. The foundational theories of economic growth account for only about half the growth observed in practice. Despite escalating warnings for more than two decades about the planetary risks of rising greenhouse gas emissions, most governments have seemed powerless to change course. Planetary Economics shows the surprising links between these seemingly unconnected facts. It argues that tackling the energy and environmental problems of the 21st Century requires three different domains of decision-making to be recognised and connected. Each domain involves different theoretical foundations, draws on different areas of evidence, and implies different policies. The book shows that the transformation of energy systems involves all three domains - and each is equally important. From them flow three pillars of policy - three quite distinct kinds of actions that need to be taken, which rest on fundamentally different principles. Any pillar on its own will fail. Only by understanding all three, and fitting them together, do we have any hope of changing course. And if we do, the oft-assumed conflict between economy and the environment dissolves - with potential for benefits to both. Planetary Economics charts how.

Services markets remain highly regulated and international trade and investment is restricted. Previous works have identified the scope for significant gains from trade, yet those results are often debated and the progress on reform has been slow. Parts I and II in Priorities and Pathways in Services Reform help fill the gap in the research around this debate. Part I OCo Quantitative Studies contains up-to-date assessment and evaluations of the impact of policy in a range of services markets in different countries (through cross-country modelling of the impacts of a reform program). Part II OCo Political Economy Studies builds on this to address the understanding of what makes a reform successful, going beyond a quantification of the benefits of reform. This book fills that gap by reporting and reviewing the experience of reform across different sectors and countries. Ten key lessons are identified for successful reform. Readers will find fresh insights into managing complex issues in services reform."

*Building Better Schools with Evidence-based Policy: Adaptable Policy for Teachers and School Leaders* provides an extensive set of free-to-use policies for building better schools. The policies included in this book cover a broad range of popular topics for schools that are not readily accessible, and each policy is built on theory, driven by research, and created by experts. Each policy is based on substantial evidence, and this is ensured through the inclusion of contributors who are active and highly reputable in their respective field. Most schools are obliged to write and maintain policy, and not all school leaders have the required skills, time, or expertise to do this effectively. *Building Better Schools with Evidence-based Policy: Adaptable Policy for Teachers and School Leaders* is a time-saving resource for schools. It aims to address the reported research-to-practice gap in education by delivering accessible evidence-based practice in a ready-to-use adaptable format. All policies within this book are designed to be adapted and tailored to the unique diversity and needs of each school as reflected by the context and the people that make up the school community. This book is relevant to every person who works in a school – worldwide. Users of this book can rest assured that each policy has been carefully formulated from the current understandings of best practice. This is a practical innovation and an example of how schools can use research evidence in their day-to-day practices. *Leading from the North* aims to improve public dialogue around the future of Northern Australia to underpin robust and flexible planning and policy frameworks. A number of areas are addressed including social infrastructure, governance systems, economic, business and regional development, climate and its implications, the roles and trends in demography and migration in the region. This book not only speaks to the issues of development in Northern Australia but also other regional areas, and examines opportunities for growth with changing economies and technologies. The authors of this book consist of leading researchers, academics and experts from Charles Darwin University, The Australian National University, James Cook University, the Australian Institute of Marine Science and many other collaborative partners. Many of the authors have first-hand experience of living and working in Northern Australia. They understand the real issues and challenges faced by people living in Northern Australia and other similar regional areas. Backed by their expertise and experience, the authors present their discussions and findings from a local perspective.

*The Human Factor in Innovation* Routledge

Hayek claimed that he always made it his rule 'not to be concerned with current politics, but to try

to operate on public opinion.' However, evidence suggests that he was a party political operative with 'free' market scholarship being the vehicle through which he sought – and achieved – party political influence. The 'main purpose' of his Mont Pelerin Society had 'been wholly achieved'. Mises promoted 'Fascists' including Ludendorff and Hitler, and Hayekians promoted the Operation Condor military dictatorships and continue to maintain a 'united front' with 'neo-Nazis.' Hayek, who supported Pinochet's torture-based regime and played a promotional role in 'Dirty War' Argentina, is presented as a saintly figure. These chapters place 'free' market promotion in the context of the post-1965 neo-Fascist 'Strategy of Tension', and examine Hayek's role in the promotion of deflation that facilitated Hitler's rise to power; his proposal to relocate Gibraltarians across the frontier into 'Fascist' Spain; the Austrian revival of the 1970s; the role of (what was presented as) 'neutral academic data' on behalf of the 'International Right' and their efforts to promote Franz Josef Strauss and Ronald Reagan and defend apartheid and the Shah of Iran

This comprehensive guide covers all aspects of action learning, one of the most widely used development methods in health, social and community care. The book addresses the theory and practice of action learning in these fields, and considers action learning as an adult educational ethos as well as a helpful tool. Based upon emerging experience, it identifies good practice in action learning and offers a wide range of resources to enable individuals and organisations extract maximum benefit from this approach. Offering practical tips grounded in sound educational principles, this book is invaluable reading for all senior managers and professionals considering using action learning for leadership, management and organisation development purposes, including organisation development practitioners and action learning facilitators, and for medical and healthcare educators and their counterparts in social and community care looking for a general introduction to this growing field.

*In Law, Economics, and Conflict*, Kaushik Basu and Robert C. Hockett bring together international experts to offer new perspectives on how to take analytic tools from the realm of academic research out into the real world to address pressing policy questions. As the essays discuss, political polarization, regional conflicts, climate change, and the dramatic technological breakthroughs of the digital age have all left the standard tools of regulation floundering in the twenty-first century. These failures have, in turn, precipitated significant questions about the fundamentals of law and economics. The contributors address law and economics in diverse settings and situations, including central banking and the use of capital controls, fighting corruption in China, rural credit markets in India, pawnshops in the United States, the limitations of antitrust law, and the role of international monetary regimes. Collectively, the essays in *Law, Economics, and Conflict* rethink how the insights of law and economics can inform policies that provide individuals with the space and means to work, innovate, and prosper—while guiding states and international organization to regulate in ways that limit conflict, reduce national and global inequality, and ensure fairness. There are, in simple terms, three principal kinds of capital that come necessarily into play when a society is evolving towards improving the lives, livelihoods, and qualities of life of its people. The first form of capital is financial – this normally includes physical forms of invested money in plant, buildings, and infrastructure. The second form of capital is human – seen simply as the level and range of skills and capabilities that are available for use in the society. When people are literate, numerate, skilled, experienced, informed, cooperative, and inquisitive, they and their societies can do much more. The third form of capital is social. Here cooperativeness shows its effects, and the rules of how that works vary greatly between societies. It is the second of these elements, human capital, that is the main focus of this book, but it overlaps with social capital extensively in these accounts and can only be understood in terms of its connections into the wider societal system. The varying patterns of its workings and influence in different Asian contexts are explained against the background of a theory of societal progress. This book was originally published as a special issue of the Asia Pacific Business Review.

Agriculture, mining and related rural industries have been central to the development of Australia's economy. This book details the role that the Australian Government has played in the making of rural and regional Australia, particularly since World War II. The book reviews these policies and evaluates them with regards the commitments undertaken by the Government to contribute towards vibrant, rural communities. Policy areas addressed include agriculture, water, education, welfare and population, natural resource management, resource extraction, Indigenous and affairs, localism, rural research and regional innovation, Youth Affairs and the devolution of regional

governance. Overall two distinct policy strategies can be observed: one wherein the government saw its role as part of the entrepreneurial state and a sector wherein government has increasingly taken itself out of industry development, leaving this role to the market. Having considered these strategies and their impacts, the book concludes that policy over the past 40 years has not in fact contributed to a more vibrant, prosperous rural and regional Australia. Rural and Regional Futures concludes with several chapters looking to the future. One chapter explores what the role of the state can be within a social market economy while the final chapter gives consideration to the initial steps rural communities will need to take to begin the process of revitalisation. While these materials present as a case study of developments in Australia, the policy shift from the Government as entrepreneur to a focus on markets is an international one and as such, the insights offered by this book will have wide appeal.

In addition to his groundbreaking contributions to pure economic theory, F. A. Hayek also closely examined the ways in which the knowledge of many individual market participants could culminate in an overall order of economic activity. His attempts to come to terms with the “knowledge problem” thread through his career and comprise the writings collected in the fifteenth volume of the University of Chicago Press's Collected Works of F. A. Hayek series. The Market and Other Orders brings together more than twenty works spanning almost forty years that consider this question. Consisting of speeches, essays, and lectures, including Hayek's 1974 Nobel lecture, “The Pretense of Knowledge,” the works in this volume draw on a broad range of perspectives, including the philosophy of science, the physiology of the brain, legal theory, and political philosophy. Taking readers from Hayek's early development of the idea of spontaneous order in economics through his integration of this insight into political theory and other disciplines, the book culminates with Hayek's integration of his work on these topics into an overarching social theory that accounts for spontaneous order in the variety of complex systems that Hayek studied throughout his career. Edited by renowned Hayek scholar Bruce Caldwell, who also contributes a masterly introduction that provides biographical and historical context, The Market and Other Orders forms the definitive compilation of Hayek's work on spontaneous order.

Marxism, Psychology and Social Science Analysis applies Marxist theory, psychology, and the work of Lucien Sève to specific research in the social sciences. It shows in practical terms what guidance can be offered for social scientific researchers wanting to incorporate Sève's view of personality into their work. Providing case studies drawn from different social sciences that give the book significant breadth of scope, Roche reviews the impact of "Taking Sève Seriously" across the study of

international relations theory, economics, law, and moral philosophy. The book begins by placing the work of Lucien Sève in context and considers the development of psychology in relation to Marxism, before going on to summarise the work of Sève in relation to the psychology of personality. It considers the opportunities for refreshed research in social relations based on developments by Sève, before examining Marxist biography and the implications of Sève's views. The book also includes chapters on the social discount rate, on constructivism in international relations, on the concept of promising in moral philosophy and the Marxist conception of individual responsibility. It addresses not only how research should be carried out differently, but whether utilising the theoretical framework of other writers, even non-Marxists, can deliver a similar outcome. With its use of five distinct case studies to analyse the work of Lucien Sève, this unique book will be of great interest to academics, researchers and postgraduate students in the fields of psychology, philosophy and social sciences.

The offsite and modular market is continuing to grow. This book builds on the success of a number of initiatives, including formative findings from literature, research and development and practice-based evidence (success stories). It presents new thinking and direction from leading experts in the fields of: design, process, construction, engineering, manufacturing, logistics, robotics, delivery platforms, business and transformational strategies, change management, legislation, organisational learning, software design, innovation and biomimetics. This book is particularly novel and timely, as it brings together a number of cogent subjects under one collective 'umbrella'. Each of these chapters contain original findings, all of which culminate in three 'Key Learning Points' which provide

new insight into the cross-cutting themes, interrelationships and symbiotic forces that exist between each of these chapters. This approach also provides readers with new contextualised understanding of the wider issues affecting the offsite market, from the need to embrace societal challenges, through to the development of rich value-laden solutions required for creating sector resilience. Content includes a balance between case studies and practice-based work, through to technical topics, theoretical propositions, pioneering research and future offsite opportunities ready for exploitation. This work includes: stakeholder integration, skills acquisition, new business models and processes, circularity and sustainable business strategies, robotics and automation, innovation and change, lean production methodologies and new construction methods, Design for Manufacturing and Assembly, scaled portfolio platforms and customisability, new legal regulatory standards and conformance issues and offsite feasibility scenario development/integration.

Given the profound moral-ethical controversies regarding the use of new biotechnologies in medical research and treatment, such as embryonic research and cloning, this book sheds new light on the role of religious organizations and actors in influencing the bio-political debates and decision-making processes. Further, it analyzes the ways in which religious traditions and actors formulate their bio-ethical positions and which rationales they use to validate their positions. The book offers a range of case studies on fourteen Western democracies, highlighting the bio-ethical and political debates over human stem cell research, therapeutic and reproductive cloning, and pre-implantation genetic diagnosis. The contributing authors illustrate the ways in which national political landscapes and actors from diverse and often fragmented moral communities with widely varying moral stances, premises and commitments formulate their bio-ethical positions and seek to influence political decisions.
