For courses in administration of preschool and daycare programs. In this popular text, Hearn and Hildebrand position the child development program among the key components of a child's "ecosystem." They show high-quality children's programs as essential support for a child's family not as islands of education unconnected to the rest of a child's world. Coverage is clearly based on developmentally appropriate practices and the indicators of quality established by the NAEYC and organized around thirteen core competencies, with a full chapter devoted to each. As the narrative is written in friendly, easy-to-understand language, and bolstered by learning aids, examples, and exercises that capture student attention and keep it.

The Art and Practice of Court Administration explores the context in which court administration is practiced and identifies the qualities and skills court administrators need. Divided into two major parts, part one covers the history of the field and how courts are organized, environmental conditions in which court administration is practiced, special impact on courts of the elected clerk of court, prosecutor, and the sheriff, the judge's administrative roles, as well as how a judge's judicial and administrative roles work with management. The second part reviews a new approach for setting and adjusting priorities among the multiple functions courts perform—the Hierarchy of Court Administration. It defines priorities, analyzes court roles that establish mission critical functions, and sets an agenda for advancing courts throughout this century. Thorough and complete, The Art and Practice of Court Administration details how courts operate, the court administrator's position and responsibilities, and approaches to issues and problems.

What does a Fortune 500 company implementing a multimillion dollar "off the shelf" system have in common with a 150 person firm building its own system? In each case, the organization failed to activate and utilize its system as initially conceived by senior management. These two organizations are hardly alone. On the contrary, more than three in five new systems fail. Many miss their deadlines. Others exceed their initial budgets, often by ghastly amounts. Even systems activated on time and under budget often fail to produce their expected results and almost immediately experience major problems. While the statistics are grim, there is at least some good news: This doesn't have to be the case. Organizations often lack the necessary framework to minimize the chance of system failure at three key points: before, during, and after system implementations. Why New Systems Fail provides such a framework with specific tools, tips, and questions from the perspective of a seasoned, independent consultant with more than a decade of related experience. The book examines in great detail the root causes of system failures. Case studies, examples, and lessons from actual system implementations are presented in an informative, straightforward, and very readable manner. More than a theoretical or technical text, the book offers pragmatic advice for organizations both deploying new systems and maintaining existing ones.

Discover a culturally competent model of clinical case management in mental health practice settings. In The Cross-Cultural Practice of Clinical Case Management, author Peter Manoleas synthesizes some of the existent thinking on case management in cross-cultural psychotherapy settings and develops an effective model of clinical case management for mental health practitioners. The person-in-environment approach leads mental health professionals to realize that case managers and their clients must deal with a variety of cultures within the treatment environment. Rehabilitation programs, substance abuse programs, public assistance, the police, and especially psychiatry itself, are each characterized by their own 'cultures.' These may, at times,

conflict with or present significant dissonance with the client's own ethnic culture. The Cross-Cultural Practice of Clinical Case Management advocates that the role of "culture broker" be added to the list of activities for effective clinical case managers. Several of the major ethnic groups represented in public mental health populations are examined, as well as other topics relevant to the daily practice of mental health professionals: Effective cross-cultural crisis intervention The culture of homelessness Women and the mental health system Asians and Pacific Islanders Latinos African Americans Native Americans Seriously Emotionally Disturbed Children The Cross-Cultural Practice of Clinical Case Management is of interest to practicing mental health professionals in the public sector as those systems convert from individual therapy to case management models of service delivery. Increasing numbers of ethnic minorities in public systems and the emphasis on cultural competence will make all of the topics of interest to many readers.
