Genetic Concepts and Terminology Human genetics is the study of the human genome and how genes are transmitted through generations. The human genome consists of 23 pairs of chromosomes (22 pairs of homologous chromosomes and one pair of sex chromosomes), each containing genes that code for proteins within the cell. On all homologous chromosome pairs, there are two forms of the same gene that are known as alleles, which are ...Basics of human genetics - Knowledge for medical students ...Read PDF Basic Concepts In Medical Genetics will explore the basic topics in genetics starting from its roots.
