 In his newspaper column, Human Matters, Steven Kalas answers readers' questions and adds his musings about life, love, family, ethics, sex, culture, art, philosophy, religion, celebration and suffering - from the most noble aspects of the human experience to its deepest, darkest secrets. He allows us to look through his unique and quirky lenses to see his view of the world. Reading Human Matters is like talking with a therapist, writer, philosopher, father, former priest, performing singer/songwriter, and an amateur stand-up comic. Kalas is all of those things. Infusing his writings on everything from sexuality to hockey violence, are the repeating themes of personal integrity, responsibility, loyalty, spiritual enlightenment, and just being the best you that you can be. Being human demands of us, that we act like human beings, and not lesser creatures. Or as Kalas wrote in a recent column, 'I can't prove that being human matters. But I've decided to live as if it does'.

Nahmias and Olsen skillfully blend comprehensive coverage of topics with careful integration of mathematics. The authors' decades of experience in the field contributed to the success of previous editions; the eighth edition continues the long tradition of excellence. Clearly written, reasonably priced, with an abundance of expertly formulated practice problems and updated examples, this textbook is essential reading for analyzing and improving all facets of operations. Some of the material in the newest edition has been reorganized. For example, the first chapter introduces service strategy, the product/process matrix and flexible manufacturing systems, benchmarking, the

productivity frontier, the innovation curve, and lean production as a strategy. The focus is slightly more international. The analysis of capacity growth planning now appears in the chapter on supply chain analytics. Aggregate planning details were added to chapter 3, including chase and level strategies in an appendix to the chapter. There is an expanded discussion on risk pooling in the chapter on supply chain strategy. The mechanics behind lean production are included in the chapter on push and pull production systems. The chapter on quality and assurance downplays sampling in favor of discussions of quality management, process capability, and the waste elimination side of lean. The separate chapter on facilities layout and location was eliminated and the information redistributed throughout the text. The authors reinforce the learning process through key points at the beginning of each chapter to guide the reader, snapshots that provide useful examples of applications to businesses, and historical notes that provide a context for the topics discussed. Production and Operations Analytics, 8/e provides the tools for adapting to the dynamic global marketplace.

Mathematical Programming Models for Agriculture, Environmental, and Resource Economics provides a comprehensive overview of mathematical programming models and their applications to real world and important problems confronting agricultural, environmental, and resource economists. Unlike most mathematical programming books, the principal focus of this text is on applications of these techniques and models to the fields of agricultural, environmental, and resource economics. The three fundamental goals of the book are to provide the reader with: (1) a level of background sufficient to apply mathematical programming techniques to real world policy and business to conduct solid research and analysis, (2) a variety of applications of mathematical programming to important problems in the areas of agricultural, environmental, and resource economics, and (3) a firm foundation for preparation to more advanced, Ph.D. level books on linear and/or nonlinear programming. Despite its introductory nature, the text places significant emphasis on real world applications of mathematical programming to decision problems. A wide array of examples and case studies are used to convey the various programming techniques available to decision analysts.
