This Part of GB/T 20801 specifies the basic requirements for the design and calculation of pressure pipelines. These basic requirements include design conditions, design criteria, piping components and their pressure design, pipeline stress analysis, etc. This Part applies to the design and calculation of pressure piping, which is defined within the scope of GB/T 20801.1.

Hacker Disassembling Uncovered, 2nd ed Taylor & Francis

Going beyond the issues of analyzing and optimizing programs as well as creating the means of protecting information, this guide takes on the programming problem of how to go about disassembling a program with holes without its source code.

Detailing hacking methods used to analyze programs using a debugger and disassembler such as virtual functions, local and global variables, branching, loops, objects and their hierarchy, and mathematical operators, this guide covers methods of fighting disassemblers, self-modifying code in operating systems, and executing code in the stack. Advanced disassembler topics such as optimizing compilers and movable code are discussed as well, and a CD-ROM that contains illustrations and the source codes for the programs is also included.

Anthrax in Humans and Animals Cambridge University Press

Covers topics such as the importance of secure systems, threat modeling, canonical representation issues, solving database input, denial-of-service attacks, and security code reviews and checklists.

The second edition of this reference provides comprehensive examinations of developments in the processing and applications of carbon black, including the use of new analytical tools such as scanning tunnelling microscopy, Fourier transform infrared spectroscopy and inverse gas chromatography.; Completely rewritten and updated by numerous experts in the field to reflect the enormous growth of the field since the publication of the previous edition, Carbon Black: discusses the mechanism of carbon black formation based on recent advances such as the discovery of fullerenes; elucidates micro- and macrostructure morphology and other physical characteristics; outlines the fractal geometry of carbon black as a new approach to characterization; reviews the effect of carbon black on the electrical and thermal conductivity of filled polymers; delineates the applications of carbon black in elastomers, plastics, and zerographic toners; and surveys possible health consequences of exposure to carbon black.; With over 1200 literature citations, tables, and figures, this resource is intended for physical, polymer, surface and colloid chemists; chemical and plastics engineers; spectroscopists; materials scientists; occupational safety and health physicians; and upper-level undergraduate and graduate students in these disciplines.

Applied Linear Statistical Models 5e is the long established leading authoritative text and reference on statistical modeling. For students in most any discipline where statistical analysis or interpretation is used, ALSM serves as the standard work. The text includes brief introductory and review material, and then proceeds through regression and modeling for the first half, and through ANOVA and Experimental Design in the second half. All topics are presented in a precise and clear style supported with solved examples, numbered formulae, graphic illustrations, and "Notes" to provide depth and statistical accuracy and precision. Applications used within the text and the hallmark problems, exercises, and projects are drawn from virtually all disciplines and fields providing motivation for students in virtually any college. The Fifth edition provides an increased use of computing and graphical analysis throughout, without sacrificing concepts or rigor. In general, the 5e uses larger data sets in examples and exercises, and where methods can be automated within software without loss of understanding, it is so done.

SDGs in the European Region Springer Nature

Practical, easy-to-follow advice that saves lives Based on the author's thirty years of hands-on experience working in the field of industrial fuel systems and combustion equipment safety, this book integrates safety codes with practical, tested, and proven guidance that makes it viable to specify, operate, and maintain industrial fuel and combustion systems as safely as possible. Readers will learn about fuels, piping, combustion, controls, and risks from more than fifty "real-life stories" the author has integrated into each chapter so one can immediately see and understand the concepts presented. The incidents depicted

resulted in forty-six deaths, hundreds of serious injuries, and billions of dollars in losses. Each example is followed by lessons learned, helping readers understand what could have been done to avoid the disaster or minimize the resulting destruction of life and property. The book begins with an introductory chapter that presents key concepts in industrial fuel and combustion systems safety. Next, chapters cover such topics as: Combustion and natural gas piping basics Gas supply system issues Gas piping repairs and cleaning Fuel trains and combustion equipment Boilers and their unique risks Controlling combustion risks: people, policy, equipment The final two chapters address risks related to facilities outside of the United States, as well as business contingency planning related to fuels and combustion equipment. The last chapter explains how to plan for and then respond quickly and effectively to fuel or combustion system incidents. Filled with practical, easy-to-follow advice that saves lives, *Fuel and Combustion Systems Safety* is an essential reference for everyone from equipment operators and maintenance personnel to corporate risk managers and global safety directors.

This book is a practical guide to discovering and exploiting security flaws in web applications. The authors explain each category of vulnerability using real-world examples, screen shots and code extracts. The book is extremely practical in focus, and describes in detail the steps involved in detecting and exploiting

each kind of security weakness found within a variety of applications such as online banking, e-commerce and other web applications. The topics covered include bypassing login mechanisms, injecting code, exploiting logic flaws and compromising other users. Because every web application is different, attacking them entails bringing to bear various general principles, techniques and experience in an imaginative way. The most successful hackers go beyond this, and find ways to automate their bespoke attacks. This handbook describes a proven methodology that combines the virtues of human intelligence and computerized brute force, often with devastating results. The authors are professional penetration testers who have been involved in web application security for nearly a decade. They have presented training courses at the Black Hat security conferences throughout the world. Under the alias "PortSwigger", Dafydd developed the popular Burp Suite of web application hack tools.

This four-volume set, edited by a leading expert in the field, brings together in one collection a series of papers that have been fundamental to the development of renewable energy as a defined discipline. Some of the papers were first published many years ago, but they remain classics in their fields and retain their relevance to the understanding of current issues. The papers have been selected with the assistance of an eminent international editorial board. The set includes a general introduction and each volume is introduced by a new overview essay, placing the selected papers in context. The range of subject matter is considerable, including coverage of all the main renewable technologies, the fundamental principles by which they

function, and the issues around their deployment such as planning, integration and socio-economic assessment. Overall, the set provides students, teachers and researchers, confronted with thousands of journal articles, book chapters and grey literature stretching back decades, with a ready-made selection of and commentary on the most important key writings in renewable energy. It will be an essential reference for libraries concerned with energy, technology and the environment.

Applied Linear Statistical Models Springer Science & Business Media

Interim measures by courts as well as tribunals are often critical to succeed in arbitration proceedings and to effectively safeguard the rights of parties pending the final adjudication of their dispute. This important book comprises a comprehensive review of interim measures in international commercial arbitration granted by courts and tribunals across jurisdictions that have adopted the UNCITRAL Model Law to critically assess the practical fault lines in the Indian arbitration regime. The book provides an in-depth analysis of the following: all reported judgments of the Indian Supreme Court and the High Courts from 1993 to 2022 on issues concerning interim measures; practical application of the UNCITRAL Model Law (and the revisions in 2006) by national arbitration statutes of over 80 jurisdictions with respect to interim measures; comparative practice and jurisprudence on interim measures in international commercial arbitration; rules of major arbitral institutions on the power and scope of interim measures granted by tribunals; detailed analysis of different types of interim measures, including anti-suit, anti-arbitration injunctions, security for costs, and interim measures in aid of foreign-seated arbitrations, the standards to be applied, and the burden of proof to be demonstrated for each type of measure; and issues of enforcement of interim measures in domestic, international, and foreign seated arbitrations. The current position of law in India and the problems plaguing the country's Arbitration and Conciliation Act 1996 (IAA), as amended in 2015 with respect to interim measures, are brought into direct comparison with other Model Law jurisdictions, offering an analysis of case laws, practical insights and cogent suggestions based on best practices that can be adopted by parties and tribunals. The Appendices provide a detailed list of statutory provisions of countries that have adopted the Model Law along with rules of major arbitral

institutions on interim measures. The author not only describes the current position of law in India and other Model Law jurisdictions on interim measures but also reveals a comprehensive understanding of the requests for interim measures, and their enforcement in domestic, international, and foreign seated arbitrations. This book engages in a comprehensive and clear discussion on the fine line between court assistance and court intervention, especially in the case of interim measures and suggests draft provisions that India and other jurisdictions can adopt in order to align with the 2006 revisions to the Model Law to foster certainty, predictability, and efficiency in case of interim measures in international commercial arbitration.
