17. Markov Chains II *Markov Chain Monte Carlo: Lecture 1 (Chapter 1)* **Math 323 Lecture notes - Section 3 2 SFU MATH 232 5.1 Dynamical Systems and Markov Chains** Lecture Notes Markov Chains Markov chains as probably the most intuitively simple class of stochastic processes. 2.1. Stochastic processes † defn: Stochastic process Dynamical system with stochastic (i.e. at least partially random) dynamics. At each time $t \in \mathbb{Z}_{\geq 0}$ the system is in one state X_t , taken

from a set S , the state space. One often writes such a process as $X = \{X_t : t \in \mathbb{Z}_{\geq 0}\}$. Markov Chains Compact Lecture Notes and Exercises Math 312 Lecture Notes Markov Chains. Warren Weckesser Department of Mathematics Colgate University Updated, 30 April 2005 Markov Chains. A (finite) Markov chain is a process with a finite number of states (or outcomes, or events) in which the probability of being in a particular state at step $n+1$ depends only on the state occupied at step n . Let $S = \{s_1, s_2, \dots, s_r\}$ be the possible states. Math 312 Lecture Notes Markov Chains - Colgate Sequence is called a Markov chain if we have a fixed collection of numbers P_{ij} (one for each pair $i, j \in \{0, 1, \dots, M\}$) such that whenever the system is in state i , there is probability P_{ij} that system will next be in state j . I. Precisely, $P\{X_{n+1} = j | X_n = i, X_{n-1} = i_{n-1}, \dots, X_1 = i_1, X_0 = i_0\} = P_{ij}$. I. Kind of an “almost memoryless” property. Probability 18.600: Lecture 32 Markov Chains - MIT OpenCourseWare Stat 8112 Lecture Notes Markov Chains Charles J. Geyer April 29, 2012 1 Signed Measures and Kernels 1.1 Definitions A signed measure on a measurable space $(\mathcal{S}; \mathcal{A})$ is a

function $\nu : \mathcal{A} \rightarrow \mathbb{R}$ that is countably additive, that is, $\nu(\bigcup_{i=1}^{\infty} A_i) = \sum_{i=1}^{\infty} \nu(A_i)$; whenever the sets A_i are disjoint (Rudin, 1986, Section 6.6). A kernel on a measurable space $(\mathcal{S}; \mathcal{A})$ is a function $K : \mathcal{A} \times \mathcal{A} \rightarrow \mathbb{R}$ Stat 8112 Lecture Notes Markov Chains Charles J. Geyer ... $n, n \in \mathbb{N}$) a Markov chain with state space $S = \mathcal{Z}$. Indeed: $P(S_{n+1} = j | S_n = i; S_{n-1} = i_{n-1}; \dots; S_0 = i_0) = P(X_{n+1} = j | X_n = i; S_{n-1} = i_{n-1}; \dots; S_0 = i_0) = P(X_{n+1} = j | i)$ by the assumption that the variables X_n are independent. The chain is moreover time-homogeneous, as $P(X_{n+1} = j | i) = P(X_1 = j | i)$ does not depend on n . Here is the transition graph of the chain: 2 Lecture notes on Markov chains 1 Discrete-time Markov chains These lecture notes have been developed for the course Stochastic Processes at Department of Mathematical Sciences, University of Copenhagen during the teaching years 2010-2016. The material covers aspects of the theory for time-homogeneous Markov chains in discrete and continuous time on finite or countable state spaces. An introduction to Markov chains - ku(i) A random walk is a Markov chain. (ii) The branching process is a Markov chain. In

general, to fully specify a (homogeneous) Markov chain, we will need two items: (i) The initial distribution $\pi = P(X_0 = i)$. We can write this as a vector $\pi = (\pi_i)_{i \in S}$. (ii) The transition probabilities $p_{ij} = P(X_{n+1} = j | X_n = i)$. We can write this as a matrix $P = (p_{ij})_{i,j \in S}$.

Part IB - Markov Chains

The text-book image of a Markov chain has a flea hopping about at random on the vertices of the transition diagram, according to the probabilities shown. The transition diagram above shows a system with 7 possible states: state space $S = \{1,2,3,4,5,6,7\}$.

Chapter 8: Markov Chains - Auckland

Markov Chains These notes contain material prepared by colleagues who have also presented this course at Cambridge, especially James Norris. The material mainly comes from books of Norris, Grimmett & Stirzaker, Ross, Aldous & Fill, and Grinstead & Snell. Many of the examples are classic and ought to occur in any sensible course on Markov chains.

Contents

Markov Chains - University of Cambridge

The course closely follows Chapter 1 of James Norris's book, Markov Chains, 1998 (Chapter 1, Discrete Markov Chains is freely available to download and I recommend that you read it.) I am also

publishing some notes. Each lecture has notes of 3.5–4 pages. These notes are now complete (subject to any small typos that may still be found).

Markov Chains - University of Cambridge

Finite discrete Markov chains

In various computational biology applications, it is useful to track the stochastic variation of a random variable. Here are some examples:

- For models of sequence evolving by point mutation, the random variable of interest is the nucleotide observed at a given position, or site, in the sequence at time t .

Lecture Notes: Markov chain

is a Markov process, the embedded chain $X^{(e)}_n$ constitutes a Markov chain. The transition probabilities of the embedded chain $p_{ij} = P(q_{ij} | q_i, i \neq j)$. Let π^* be the steady state probability of the Markov process and $\pi^*(e)$ be the steady state probability of the embedded Markov chain.

$$\pi^*_i = \pi^*(e)_i = q_i P_j \pi^*(e)_j = P_j \pi^*(e)_j$$

Note that π^*
