KENYON HADASSAH

The International Directory of

Government 2021 WIT Press

Presents the OECD Guidelines on Corporate Governance of State-Owned Enterprises as well as a comparative overview of main practices and issues related to corporate governance of state-owned enterprises in the OECD area.

Renewable energy market analysis: GCC 2019

Youcanprint
This edition of the U.S. Geological Survey (USGS) Minerals Yearbook discusses the performance of the worldwide minerals and materials industries during year 2013 and provides background information to assist in interpreting that performance. These annual reviews are designed to provide timely statistical data on mineral commodities in various countries. This volume covers data from Asia and the Pacific. Each report includes sections on government policies and programs, environmental issues,

trade and production data, industry structure and ownership, commodity sector developments, infrastructure, and a summary outlook. Audience: Government employees and contractors, as well as businesses and employees, all working in mineral-related trades, especially with interests in statistics about mineral commodities overseas, will find this resource invaluable.

Menjadi Manusia Setengah Dewa : Tidar Media Springer

This report explores the prospects for renewables to diversify national economies and the combined GCC energy mix, while helping the region meet climate goals and contribute to the 2030 Agenda for Sustainable Development. *Gulf Business* IGI Global

The Dubai Phenomenon - The impossible becomes possible

Routledge
This book covers critical debates on policies, markets and emerging issues that shape renewable energy transition in the Asian region, which is fast becoming an epicenter of the global energy consumption. The chapters focus on domestic policies, geopolitics, technology landscape and governance structure

pertaining to the development of renewable energy in different Asian countries ranging from China to the Middle East. The book presents an insightful view of the pace and magnitude of the energy transition. It presents critical steps countries are taking to promote affordable and clean energy (SDG 7) as well as strengthening climate mitigation actions (SDG 13). In addition, this book introduces the concept of co-innovation---a collaborative and iterative approach to jointly innovate, manufacture and scale up low-carbon technologies---and its role in promoting energy transition in Asia. Chapter 8 (Renewable energy deployment to stimulate energy transition in the Gulf Cooperation Council) is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

UAE UNESCO Publishing 10 years ago the idea that solar and wind energy in desert areas could become a major source of energy for the world sounded like crazy. The German industry and a German NGO launched in those days a Desertec1.0 plan to bring electrical

power from the North African deserts to Europe, even to Germany. A long journey of studies, regional and international stakeholder discussions and many trials and errors have followed.

Desertec1.0 became Desertec2.0 in 2015 when the industry initiative Dii relocated from Munich to Dubai focusing on developments and benefits in the MENA region. Today all desert countries have adopted the basic Desertec idea, which is swiftly migrating to Desertec3.0: MENA countries to become an emission free power house for green electrons and green molecules (such as hydrogen) for their own people and for the world markets. The exciting story of Dii Desert Energy and emission free energy perspectives for all are smartly presented and discussed in this book by Paul van Son and Thomas Isenburg....

Secretary General's Annual Report

International Renewable Energy Agency (IRENA) This open access book, comprising thirty-nine chapters divided into social, cultural, economic, and political spheres, offers a unique opportunity to dive into

the complex, dynamic, and sometimes contradictory transformation of Gulf societies in the last few decades. Whilst the Gulf region has at times been seen as impervious to this natural phenomenon of transformation---timeless, never changing, deeply rooted in its ancient tribal customs and traditions and able to blend past and present seamlessly without suffering the wrenching trauma of change---this is clearly not the case, and the region is not immune to the inevitable forces of social change. There is no doubt today that the social change sweeping the Gulf has been profound, affecting almost every aspect of life in the Gulf societies. This volume has an encyclopedic value as the chapters collectively offer multifaceted and multidisciplinary perspectives to understand social change in the Gulf region.

Through these chapters, the role of economic and educational transformation, and the impact of social media, migration, and urbanization have in driving social change in the Gulf societies is examined in detail with a focus on their directions,

magnitudes, and relevant policy options. It also considers how COVID-19 is affecting the lives of the people in the Gulf. This book bridges gaps in the understanding of the rapid pace of social change in the Gulf, offering practical solutions for policy interventions. It is of interest to scholars and students in Middle Eastern studies, specifically, as well as sociology, media studies, migration studies, and educational policy.

The Report: Dubai

2014 BoD – Books on Demand

In many respects 2014 marked the transition from strong recovery to promising growth for Dubai. With many exciting projects in the pipeline, not least the hosting of Expo 2020, the emirate is continuing to build on its reputation as a dynamic and international centre for business. Already a regional and global centre for business and finance, Dubai's reputation has been bolstered by the MSCI's decision to upgrade the UAE from frontier to emerging market status in 2014, while the emirate's successful Expo 2020 bid is expected to generate myriad opportunities for private investors across a

range of sectors.

Construction is thriving once again, driven in large part by strong retail sector growth, with various projects, including plans for the world's largest mall, indicating that the sector will maintain its position as the emirate's biggest GDP contributor moving forward. The transport and logistics framework is set for major expansion in the coming years as well, furthering cementing the emirate's status as a leading transport and logistics hub not just regionally, but globally too. The continued development of Dubai's retail and hospitality offerings, alongside the upgrades to its airports, should help to ensure robust growth in visitor numbers from both the region and further afield.

Corporate Governance of State-Owned Enterprises A Survey of OECD Countries

Springer Nature

The waste of oil and gas in the Gulf erodes economic resilience and increases security risks. This is the first report to offer practical recommendations that address the key challenges of governance, political commitment, and market incentives from

the perspectives of member countries of the Gulf Cooperation Council (Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, UAE).

Social Change in the Gulf Region

Routledge
Knowing the place you are about to visit it is even more important when those places are Dubai and the United Arab Emirates. Dubai is a dynamic reality that grows at impressive rates, an intriguing city, full of charm and full of amazing surprises. A City born only a few decades ago from the desert that has earned a place in the spotlight as The City of Records. A metropolis where traditions, Arab culture and innovation combine in a multitude of ways, to require a guide to better understand how to deal with it and know its pros and cons. Here is where the idea of writing The Dubai Phenomenon, the impossible becomes possible.

Renewable Energy in the GCC Countries

Springer

The Cooperation Council for the Arab States of the Gulf (GCC) has been at the epicenter of global energy markets because of its substantial endowment of hydrocarbons. Yet countries in the region

have also stated their intent to be global leaders in renewable energy. This collection explores the drivers for the widespread adoption of renewable energy around the GCC, the need for renewable energy and the policy-economic factors that can create success. All six countries within the GCC have plans to include renewable energy power generation in their energy mix for various reasons including: a growing demand for electricity because of increasing populations, an increasing government fiscal deficit due to inefficient subsidies, the need to diversify the economy and global pressure to meet climate change requirements. However, the decision of when and by how much to introduce renewable energy is fraught with complications. In this book, a stellar cast of regional policy and academic experts explore the reasons behind these renewable energy plans and the potential impediments to success, whether it be the declining cost of producing energy from hydrocarbons, an infrastructure which needs to be updated, social acceptance, lack of

financing and even harsh weather. Weighing up all these factors, the book considers the route forward for renewable energy in the Gulf region. *The Economics of Renewable Energy in the Gulf* offers an excellent examination of the adoption of renewable energy in the area. It will be of great interest to academic researchers and policy makers alike, particularly those working in the areas of energy economics, public policy and international relations.

The Energy Regulation and Markets Review
Routledge

This book discusses renewable energy policy in oil and gas-wealthy Arab states and presents the reader with a well-informed overview of the national energy systems – both conventional and renewable. It also seeks to answer questions on the poor growth prospects by contextualizing the various national renewable energy production efforts in the other energy sectors, national and international power politics and energy markets. With a focus on the UAE and Algeria – who were both vocal in their promotion of renewable energies for domestic and

export-oriented power production – these two cases studies are highlighted with common features both in terms of policies and energy systems and showing the vast differences between the governance contexts of the lower Gulf and of North Africa. Both country case studies also feature sections on the most visible renewable energy project connected to the country – the UAE’s Masdar project and Algeria’s energy efforts and relation to the trans-Mediterranean renewable energy efforts around the Desertec project. Building on original research in both countries and over 90 interviews with senior stakeholders in half a dozen states, this book seeks to contribute to both Middle Eastern and (renewable) energy policy studies. In combination with the transition management approach as innovation theory model this book covers a timely and important topic with a wide-ranging audience, both geographically and in terms of scientific background.

Water Resources and Integrated Management of the United Arab Emirates
The Oil & Gas Year Limited

This book can be used to teach public policy and help international industry leaders and academics understand the context of UAE and the role it plays in the global arena. This project is a series by the Academy of International Business - MENA chapter, supported by the Mohammed Bin Rashid School of Government, Dubai.

Planning for Tourism

Routledge

The meteoric expansion of the solar (PV) industry resulted from an incredible reduction in the prices of PV systems—first described in the author's earlier book *Sun above the Horizon*. It began early in the new century and continued in the following decade with an extraordinary upswing. As a result, by the end of 2016, the worldwide PV operational power capacity grew to some 300 GW. Most of this increased capacity, 250 GW, was installed during the years 2010–2016. Suddenly PV started to affect the traditional generation of electricity and helped reduce carbon emissions and other environmental impacts. This book describes how this happened. Three practically unlimited new PV markets—residential,

commercial, and utility scale—materialized, along with the new PV-oriented financial systems needed to provide the required gargantuan-scale capital. This book also highlights the increasing demand for and the corresponding increased supply of PV cells and modules on four continents and the impact of this PV breakthrough on our lives and future. To present this unparalleled story of societal transformation, the author was helped by the contributions of top experts Wolfgang Palz, Michael Eckhart, Allan Hoffman, Paula Mints, Bill Rever, and John Wohlgemuth.

Energy Transitions in the Middle East Oxford Business Group

In this edited volume, academics and practitioners from various disciplines investigate the challenges, opportunities and frameworks in the implementation of Smart Cities in the Gulf. The volume presents insightful analyses and identifies key lessons learned through case studies covering four main themes including smart city frameworks and governance, resources and infrastructure, information and communication

technologies, and the social perspective. In doing so, the book provides policy recommendations related to smart governance, as well as overall frameworks that cities can adopt in their process of transition, and knowledge that is integral to bridge the gap between various stakeholders in the Smart City milieu. This edited volume comprises extended versions of papers presented at a workshop held at the University of Cambridge, UK titled “Smart Cities in the GCC: Current State, Opportunities and Challenges.”

The Report: Dubai 2015
Government Printing Office

The Routledge Handbook of Energy Law provides a definitive global survey of the discipline of Energy Law, capturing the essential and relevant issues in Energy today. Each chapter is written by a leading expert, and provides a contemporary overview of a significant area within the field. The book is divided into six geographical regions based on continents, with a separate section on Russia, an energy powerhouse that straddles both Europe and Asia. Each section

contains highly topical chapters from authors who address a number of core themes in Energy Law and Regulation: • Energy security and the role of markets • Regulating the growth of renewable energy • Regulating shifts in traditional forms of energy • Instruments in regulating disputes in energy • Impact of energy on the environment • Key issues in the future of energy and regulation. Offering an analysis of the full spectrum of current issues in Energy Law, the Routledge Handbook of Energy Law is an essential resource for advanced students, researchers, academics, legal practitioners and industry experts. Chapter 12 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license.

Contemporary Persian Gulf Shahih

The Persian Gulf 2020 is the eighth in the annual Persian Gulf series published by MEI@ND. It is a comprehensive analysis of India's bilateral relations with the

nine countries in the Persian Gulf and the GCC and focuses on developments in 2019. It gives a comprehensive account of the internal political, economic and security situation in the Persian Gulf countries and India's strategic, political, economic and cultural engagements with the region. The book also offers policy recommendations based on the current state of affairs.

Emission free energy from the deserts OECD Publishing

Dubai has continued to meet its targets in becoming the global capital of Islamic finance, nearly doubling the number of sukuk (Islamic bonds) listings on its exchanges since 2017. Furthermore, eased policy restrictions to encourage foreign investment and the 2019 budget's continued commitment to infrastructure development ahead of Expo 2020 are expected to continue driving economic activity. As one of the most diversified economies in the region, Dubai continues to present growth opportunities in various sectors including tourism, logistics, manufacturing and education. Although

the emirate has benefitted from its proximity to oil and gas fields, Dubai is right at the forefront of the emerging cleaner energy world, and developing and promoting renewable technologies, including solar energy and electric vehicles.

Persian Gulf 2020

Oxford Business Group Since the outbreak of the Arab Spring the Middle East is going through a turbulent phase as violence, internal conflicts and civil wars are ravaging a number of countries. Even relatively stable Gulf monarchies are not untouched by the impact of popular demand for change. For India, the Persian Gulf is an extended neighbourhood and the region of vital importance receives scant attention. In the light of the Arab Spring, Iranian nuclear deal and the rise of ISIS, it has become impossible for India to be indifferent to the changing internal dynamics. Please note: Taylor & Francis does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka. *The Report: Dubai 2018* Springer Nature Featuring dozens of interviews from across every major sector of the

economy, we are confident that this

publication will be a vital handbook for anybody

looking to do business in Abu Dhabi.
