In this study of Amsterdam's Golden Age cultural elite, John Michael Montias analyzes records of auctions from the Orphan Chamber of Amsterdam through the first half of the seventeenth century, revealing a wealth of information on some 2,000 art buyers' regional origins, social and religious affiliations, wealth, and aesthetic preferences. Chapters

focus not only on the art dealers who bought at these auctions, but also on buyers who had special connections with individual artists.

**Perspective** John Wiley & Sons

Every culture knows the

phenomenon of monsters, terrifying creatures that represent complete alterity and challenge every basic notion of self and identity within a cultural paradigm. In Latin and Greek culture, the monster was created as a marvel, appearing as something which, like transgression itself, did not belong to the assumed natural order of things. Therefore, it could only be created by a divinity responsible for its creation, composition, goals and stability, but it was triggered by some in-

or non-human action performed by humans.

The identification of something as monstrous denotes its place outside and beyond social norms and values. The monster-evoking transgression is most often indistinguishable from reactions to the experience of otherness, merging the limits of humanity with the limits of a given culture. The topic entails a large intersection among the cultural domains of law, literature, philosophy, anthropology, and

technology. Monstrosity has indeed become a necessary condition of our existence in the 21st century: it serves as a representation of change itself. In the process of analysis there are three theoretical approaches: psychoanalytical, representational, ontological. The volume therefore aims at examining the concept of monstrosity from three main perspectives: technophobic, xenophobic, superdiversity. Today's globalized world is shaped

in the unprecedented phenomenon of international migration. The resistance to this phenomenon causes the demonization of the Other, seen as the antagonist and the monster. The monster becomes therefore the ethnic Other, the alien. To reach this new perspective on monstrosity we must start by examining the many facets of monstrosity, also diachronically: from the philological origin of the term to the Roman and classical viewpoint, from

the Renaissance medical perspective to the religious background, from the new filmic exploitations in the 20th and 21st centuries to the very recent ethnological and anthropological points of view, to the latest technological perspective, dealing with artificial intelligence. Disruptive Fintech Walter de Gruyter GmbH & Co KG "Payments Systems in the U.S." is a comprehensive description of the systems - (cards, checks, cash, ACH, etc.) that move money between and

among consumers and enterprises in the U.S. In clear and lively writing, the authors explain what they systems are, how they work, who uses them, who provides them, who profits from them and how they are changing. Anyone working in the payments industry - or needing to use payments products - can benefit from understanding this. Soft Computing and Signal Processing Springer This book aims to assess the experience of education during

COVID-19 pandemic and explore the future of application of technologies and artificial intelligence in education. Education delivery requires the support of new technologies such as artificial intelligence (AI), the Internet of Things (IoT), big data, and machine learning to fight and aspire to new diseases. The academic community and those interested in education agree that education after the corona pandemic will not be the same as before. The book also

questions the role of accreditation bodies (e.g., AACSB, etc.) to ensure the effectiveness and efficiency of technology tools in achieving distinguished education in times of crisis. Proceedings of ICICC 2021, Volume 2 Springer Nature Gambling Debt is a game-changing contribution to the discussion of economic crises and neoliberal financial systems and strategies. Iceland's 2008 financial collapse was the first case in a series of meltdowns,

a warning of danger in the global order. This full-scale anthropology of financialization and the economic crisis broadly discusses this momentous bubble and burst and places it in theoretical, anthropological, and global historical context through descriptions of the complex developments leading to it and the larger social and cultural implications and consequences. Chapters from anthropologists, sociologists, historians, economists, and key local

participants focus on the neoliberal policies—mainly the privatization of banks and fishery resources—that concentrated wealth among a select few, skewed the distribution of capital in a way that Iceland had never experienced before, and plunged the country into a full-scale economic crisis. *Gambling Debt* significantly raises the level of understanding and debate on the issues relevant to financial crises, painting a portrait of the meltdown from

many points of view—from bankers to schoolchildren, from fishers in coastal villages to the urban poor and immigrants, and from artists to philosophers and other intellectuals. This book is for anyone interested in financial troubles and neoliberal politics as well as students and scholars of anthropology, sociology, economics, philosophy, political science, business, and ethics. Publication supported in part by the National Science Foundation.

How language users from different linguistic backgrounds cope with forms of complexity is still a territory with many unanswered questions. The current book is concerned with morphologically and syntactically complex items, that is, derivatives, inflected forms, compounds, phrases and forms related by agreement and examines how these constructions are acquired and learned in a great range of

different languages, such as Turkish, Welsh, Basque and Catalan. Relying on a variety of methodologies targeting production or comprehension, among others, lexical decision and priming experiments, an EEG study, a corpus analysis and a reading test, the authors consider data from native speakers mastering one or more languages and second-language users. Overall, the volume reflects upon and contributes to our understanding of how the peculiarities of language and its users affect the

learnability of complex forms.

This work provides comprehensive coverage of the preparation, processing, marketing, safety and nutritional aspects of traditional foods across the globe. Individual chapters focus on the traditional foods of different cultures, with further chapters discussing the consumer acceptability of traditional foods as well as the laws and regulations and the

sensorial factors driving the success of these foods. In addition, the integration of traditional food into tourism development plans is discussed at length. As the first publication to focus on a wide scale variety of traditional foods, including their histories and unique preparatory aspects, this is an important book for any researcher looking for a single reference work covering all of the important processing information for each major traditional food

category. From traditional Arab foods to traditional Indian, European, African, Australian and Native American foods, *Traditional Foods: History, Preparation, Processing and Safety* covers the full spectrum of cultural foods, dedicating extensive information to each traditional food type. A full overview of current trends in traditional foods is included, as is a comprehensive history of each type of traditional food. Specific regulations are discussed, as are marketing factors and

issues with consumer acceptability. With the recent trends in consumer interest for traditional foods which can not only bring great sensory satisfaction but also fulfill dimensions of culture and tradition, this is a well-timed and singular work that fulfills a great current need for researchers and promises to be an important source for years to come.

*Thinking Forth* applies a philosophy of problem solving and programming style to the unique programming language Forth. Published first in 1984, it could be among the timeless classics of computer books, such as Fred Brooks' *The Mythical Man-Month* and Donald Knuth's *The Art of Computer Programming*. Many software engineering principles discussed here have been rediscovered in eXtreme

Programming, including (re)factoring, modularity, bottom-up and incremental design. Here you'll find all of those and more, such as the value of analysis and design, described in Leo Brodie's down-to-earth, humorous style, with illustrations, code examples, practical real life applications, illustrative cartoons, and interviews with Forth's inventor, Charles H. Moore as well as other Forth thinkers.

This book presents models describing HIV transmission rates at population level, discussing the main statistical methods and analytical interventions. It also assesses the practical applicability of the various modelling techniques, offering readers insights into what methods are available and, more importantly, when they should be used to address HIV transmission at global level. The book includes

realistic simulation models fitted to clarify the rate of HIV mother-to-child transmission (HIV MTCT), and substantiates the conclusions that can be drawn as well as the appropriate time for making global-level clinical decisions concerning people living with HIV/AIDS (PLHIVs). Intended for students, academics and researchers, the book offers more than just an introduction to the topic – it also features in-depth, yet easy-to-understand, descriptions of a new

mathematical/statistical HIV mother-to-child transmission model, making it a useful resource for clinicians, public health workers and policymakers involved in implementing HIV-prevention programmes at national /global level. *History, Preparation, Processing and Safety* Amsterdam University Press

 This book provides a new approach to Albrecht Ritschl's theology. Leif Svensson argues that Ritschl's theological project must be related to three cultural developments – historical criticism, materialism, and anti-Lutheran polemics – and understood in the context of the de-Christianization of the Bildungsbürgertum in nineteenth-century Germany. “Albrecht Ritschl remains the great

unknown of nineteenth-century theology. In this important study, Leif Svensson sheds new light on Ritschl's thought by relating it to contemporaneous social and cultural developments. Rooted in deep familiarity with German intellectual life of the time, the book convincingly illustrates the value of a history of theology that is mindful of its various contexts." - Johannes Zachhuber University of Oxford "I confess I was hesitant to blurb a book on Ritschl,

but then I read it. Svensson's well researched presentation of Ritschl's thought is compelling and forceful. I highly recommend this book." - Stanley Hauerwas Duke Divinity School "Svensson's work ably places Ritschl's contribution to theology in the broader context of the intellectual and cultural history of the nineteenth century. Students of Protestant theology and thought and all interested in the complex relationship between Christian theology and

modernity will learn something of value from this important study." - Thomas Albert Howard Valparaiso University State of the Sector Report 2009 Walter de Gruyter GmbH & Co KG There has not been conducted much research in religious studies and (linguistic) anthropology analysing Protestant missionary linguistic translations. Contemporary Protestant missionary linguists employ grammars, dictionaries, literacy campaigns, and

translations of the Bible (in particular the New Testament) in order to convert local cultures. The North American institutions SIL and Wycliffe Bible Translators (WBT) are one of the greatest scientific-evangelical missionary enterprises in the world. The ultimate objective is to translate the Bible to every language. The author has undertaken

systematic research, employing comparative linguistic methodology and field interviews, for a history-of-ideas/religions and epistemologies explication of translated SIL missionary linguistic New Testaments and its premeditated impact upon religions, languages, sociopolitical institutions, and cultures. In addition to taking into account the history of missionary

linguistics in America and theological principles of SIL/WBT, the author has examined the intended cultural transformative effects of Bible translations upon cognitive and linguistic systems. A theoretical analytic model of conversion and translation has been put forward for comparative research of religion, ideology, and knowledge systems.
