"Not so long ago, most of the globe was uncharted wilderness. The explorations of the world's deep jungles, vast deserts, stark badlands, frozen polar regions, and countless chains of islands are some of the greatest adventures of recent times, and the discoveries they yielded gave birth to and nourished the most important idea in biology: evolution. Into the Jungle invites students to step into the lives of naturalists who followed their dreams, and often risked their lives, to explore the unknown and who made some of the most important discoveries that have shaped our understanding of how life has evolved."--

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make

informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students,

we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom.

Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.
